HTs For Sale

1 - Kenwood TH-77AT (PB-6 battery), BC-11 Desk Charger, spare PB-6 battery, TSU-7 CTCSS encode/decode, vinyl carry case and MARS/extended frequency modifications. Original cartons. $265.00

1 - Kenwood TH-26AT (PB-6 battery), Wall Charger, TSU-7 CTCSS encode/decode, vinyl carry case and MARS/extended frequency modifications. Original carton. $145.00

1 - Kenwood TH-2600A (PB-26 battery), with BT-2 Desk Charger, spare PB-26 battery, BT-6 alkaline battery case, TU-35 CTCSS encode, leather carry case and MARS/extended frequency modifications. $175.00

All units in very good condition and in full working order. No scratches to LCD displays. Minor scratches to cases from normal wear, but no dings or scrapes from abuse. All units have been kept in their carrying case.

TERMS: COD, you pay shipping.

I was always under the impression that during a net - as long as you identify your callsign once every 10 mins and at the end of your QSO - you don't have to use callsigns all the time - and using tactical callsigns probably makes more sense - so that people know _who_ you are, ie. what your job is.

BTW, my license came th day after the marathon - so I couldn't have participated in any nets anyway. [waiting time approx. 8 weeks BTW]

USING AND UNDERSTANDING DECIBELS

by

Paul H. Bock, Jr. K4MSG

General

The decibel, or dB, is a means of expressing either the gain of an active device (such as an amplifier) or the loss in a passive device (such as an attenuator or length of cable). The decibel was developed by the telephone company to conveniently express the gain or loss in telephone transmission systems. The decibel is best understood by first discussing the rationale for its development.

If we have two cascaded amplifiers as shown below, with power gain factors A1 and A2 as indicted, the total gain is the product of the individual gains, or A1 x A2.

Input >-------- Amp #1 --------- Amp #2 ------> Output

A1 = 275 A2 = 55

In the example, the total gain factor At = 275 x 55 = 15,125. Now, imagine for a moment what it would be like to calculate the total gain of a string of amplifiers. It would be a cumbersome task at best, and especially so if there were portions of the cascade which were lossy and reduced the total gain, thereby requiring division as well as multiplication.

It was for the reason stated above that Bell Telephone developed the decibel. Thinking back to the rules for logarithms,

we recall that rather than multiplying two numbers we can add their logarithms and then take the antilogarithm of this sum to find the product we would have gotten had we multiplied the two numbers.

Mathematically,
log (A x B) = log A + log B

If we want to divide one number into another, we subtract the logarithm of the divisor from the logarithm of the dividend, or in other words
log (A/B) = log A - log B

The telephone company decided that it might be convenient to handle gains and losses this way, so they invented a unit of gain measurement called a "Bel," named after Alexander Graham Bell. They defined the Bel as

Gain in Bels = log A

where A = Power amplification factor

Going back to our example, we find that log 275 = 2.439 and log 55 = 1.740, so the total gain in our cascade is

2.439 + 1.74 = 4.179 Bels

It quickly occurred to the telephone company engineers that using Bels meant they would be working to at least two decimal places. They couldn't just round things off to one decimal place, since 4.179 bels is a power gain of 15,101 while 4.2 bels is a power gain of 15,849, yielding an error of about 5%. At that point it was decided to express power gain in units which were equal to one-tenth of a Bel, or in deci-Bels. This simply meant that the gain in Bels would be multiplied by 10, since there would be ten times more decibels than Bels. This changes the formula to

Gain in decibels (dB) = 10 log A (Eq. 1)

Again using our example, the gain in the cascade is now

24.39 + 17.40 = 41.79 decibels

The answer above is accurate, convenient to work with, and can be rounded off to the first decimal place will little loss in accuracy; 41.79 dB is a power gain of 15,101, while 41.8 dB is a power gain of 15,136, so the error is only 0.23%.

What if the power gain factor is less than one, indicating an actual power loss? The calculation is performed as shown above using Equation 1, but the result will be different. Suppose we have a device whose power gain factor is 0.25, which means that it only outputs one-fourth of the power fed into it? Using Equation 1, we find
G = 10 log (0.25)

G = 10 (-0.60)

G = -6.0 dB

The minus sign occurs because the logarithm of any number less than 1 is always negative. This is convenient, since a power loss expressed in dB will always be negative.

There are two common methods of using the decibel. The first is to express a known power gain factor in dB, as just described. The second is to determine the power gain factor and convert it to dB, which can all be done in one calculation. The formula for this operation is as follows:

$$G = 10 \log \frac{Po}{Pi} \quad \text{(Eq. 2)}$$

where G = Gain in dB
Po = Power output from the device
Pi = Power input to the device

Both Po and Pi should be in the same units; i.e., watts, milliwatts, etc. Note that Equation 2 deals with power, not voltage or current; these are handled differently when converted to dB, and are not covered in this discussion. Below are two examples of the correct application of Equation 2:

Ex. 1: An amplifier supplies 3.5 watts of output with an input of 20 milliwatts. What is the gain in dB?

$$G = 10 \log \frac{3.5 \text{ watts}}{0.02 \text{ watts}}$$

G = 10 log (175)

G = 10 (2.24)

G = 22.4 dB

Ex. 2: A length of coaxial transmission line is being fed with 150 watts from a transmitter, but the power measured at the output end of the line is only 112 watts. What is the line loss in dB?

$$G = 10 \log \frac{112 \text{ watts}}{150 \text{ watts}}$$

G = 10 log 0.747

G = 10 (-0.127)

G = -1.27 dB

Uses of the Decibel with a Defined Reference

The most common "defined reference" use of the decibel is the dBm, or decibel relative to one milliwatt. It is different from the dB because it uses the same specific, measurable power level as a reference in all cases, whereas the dB is relative to either whatever reference a particular user chooses or to no reference at all.

The difference between "relative" and "defined reference" can be understood easily by considering temperature. For example, if I say that it is "20 degrees colder now than it was this morning," it's a relative measurement; unless the listener knows how cold it was this morning, there is no reference for comparison. If, however, I say, "It was 20 degrees C this morning, but it's 20 degrees colder now," then the listener knows exactly what is meant; it is now 0 degrees C. This can be measured on a thermometer and is referenced to a defined temperature scale.

So it is with dB and dBm. A dB has no particular defined reference while a dBm is referenced to a specific quantity: the milliwatt (1/1000 of a watt).

{NOTE: The IEEE definition of dBm is "a unit for expression of power level in decibels with reference to a power of 1 milliwatt." Note that no mention is made of the value of circuit impedance; the dBm is merely an expression of power present in a circuit relative to a known fixed amount (i.e., 1 milliwatt) and the circuit impedance is irrelevant.}

We can apply this concept to Equation 1 as follows:

dBm = 10 log (P) (1000 mW/watt)

where dBm = Power in dB referenced to 1 milliwatt
P = Power in watts

For example, take the case where we have a power level of 1 milliwatt:

dBm = 10 log (0.001 watt) (1000 mW/watt)

dBm = 10 log (1)

dBm = 10 (0)

dBm = 0

Thus, we see that a power level of 1 milliwatt is 0 dBm. This makes sense intuitively, since our reference power level is also 1 milliwatt. If the power level was 1 watt, however, we find that

dBm = 10 log (1 watt) (1000 mW/watt)

dBm = 10 (3)

dBm = 30

The dBm can also be negative, just like the dB; if our power level is 1 microwatt, we find that

dBm = 10 log (1 x 10E-6 watt) (1000 mW/watt)

dBm = -30 dBm

Since the dBm has a defined reference it can be converted back to watts if desired. Since it is in logarithmic form it may also be conveniently combined with other dB terms, making system analysis easier. For example, suppose we have a signal source with an output power of -70 dBm, which we wish to connect to an amplifier having 22 dB gain through a cable having 8.5 dB loss. What is the output level from the amplifier? To find the answer, we just add the gains and losses as follows:

Output = -70 dBm + 22 dB + (-8.5 dB)

Output = -70 dBm + 22 dB - 8.5 dB

Output = -56.5 dBm

As a final note, power level may be referenced to other quantities and expressed in dB form. Below are some examples:

dBW = Power level referenced to 1 watt

dBk = Power level referenced to 1 kilowatt (1000 watts)

One other common usage is dBc, which is essentially a relative term with a varible reference, like dB alone. It means "dB referenced to a carrier level" and is most commonly seen in receiver specifications regarding spurious signals or images. For example, "Spurious signals shall not exceed -50 dBc" means that spurious signals will always be at least 50 dB less than some specified carrier level present (which could mean "50 dB less than the desired signal").

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 08/2330Z NOVEMBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 08 NOVEMBER AND FORECAST FOR 09 NOVEMBER - 11 NOVEMBER

1A. SOLAR SUMMARY
Activity: Low

Flares: None

Observed 10.7 cm flux/Equivalent Sunspot Number : 80/20

GOES satellite data for 07 Nov
Daily Proton Fluence >1 MeV: 4.7E+05
Daily Proton Fluence >10 MeV: 1.8E+04
Daily Electron Fluence >2 MeV: 4.4E+07 (normal)
X-ray background: A7.1
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
09 Nov 10 Nov 11 Nov
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 09 Nov: 80/20

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 07 Nov
Learmonth 5 2112 2112
Fredericksburg 6 8
Planetary 10 12

Observed Kp for 07 Nov: 2334 3121
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
09 Nov 15 Quiet to unsettled
10 Nov 10 Quiet to unsettled
11 Nov 10 Quiet to unsettled
COMMENT: High latitudes may experience isolated active conditions on
9 Nov due to a small coronal hole.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
08 Nov fair-normal fair-normal fair
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
09 Nov normal normal fair-normal
10 Nov normal normal fair-normal
11 Nov normal normal normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
08 Nov -3 Near predicted monthly values. Sporadic E and spread
F may have caused degradations from 10-16 UT.

Predicted Monthly T-index for November: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
09 Nov 15 Near predicted monthly values
10 Nov 20 Near predicted monthly values
11 Nov 20 Near predicted monthly values
COMMENT: Townsville frequencies were depressed 20-30% from 00-08 UT
then near predicted monthly values.

Yup. Works Great. Bought one here in Dallas about 10 days ago.
Most stores don't have 'em yet. I lucked out and found a mgr
that special ordered one to get it in stock.

The warehouse in Fort Worth has them and will ship them to you.
Its in the latest catalog ... sorry I dont have one handy.

rob.

>year old?

Yes, there's little difference between learning at 18 and learning at
60 (assuming your faculties and hearing are still intact). You have
fewer neurons left alive at 60 than at 18, but it doesn't take that
many to do Code. Where the real advantage lies is between the ages of
2 and 10 when the brain is still plastic and flexible enough to rapidly
assimilate the Code. A young child still has a *lot* of unconditioned
neural pathways, perhaps an order of magnitude more than an 18 year
old, and perhaps 2+ orders of magnitude more than a 60 year old.

The problem at 60 is that short term memory may not work as well
as it did at 18 due to lower neurotransmitter activity. That can
affect those trying to "copy behind" but should have little impact
on reflexive copy.

Dogs can be conditioned to respond to Morse code, and they have fewer
neural pathways than humans. You know you really can teach an old dog
new tricks, but it tends to annoy the dog. They naturally prefer to use
the old familar tricks that have worked well in the past. Humans have
that problem also as they age. The long term reflexes and memories are
much stronger from being continually reinforced over the decades.

: CW -- especially at the faster speeds? Or do you think that, given equal
: desire, someone 60 could learn 13 wpm or 20 wpm just as fast an an 18
: year old?

Perhaps ..... but it is definitely not an impossibility. Example,
my Grandmother - WA7FFG, passed her novice & tech (5 wpm) when she
was 65 years old. A couple of years later, in a TWO WEEK period
over the course of a Christmas vacation, I practiced with her
everyday for a few hours. She quite literally in that time went
from 5 wpm to 20 wpm. Personally, I was amazed .... didn't think
it could be done .... but she did it. Of course, she was highly
motivated to do so ... her husband (K7OQY) had become a "Silent Key"
and Ham radio would help her to maintain friendships he had
established as well as to develop more for herself in her sudden
loneliness.

Motivation and effort are essential ... there's no way to learn it without
those two factors.

Good luck and warmest regards,
Sandy WA6BXH/7J1ABV

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial BBS, *(205) 409-9280*, and are updated daily (when possible). Documentation and tracking software are also available on this system. As a service to the satellite user community, the most current elements for the current shuttle mission are provided below. The Celestial BBS may be accessed 24 hours/day at 300, 1200, 2400, 4800, or 9600 bps using 8 data bits, 1 stop bit, no parity.

Element sets (also updated daily), shuttle elements, and some documentation and software are also available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

2086. Procedure for calling Mir/Shuttle help needed

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-09 01:10:07 UTC
From: tomsunman@aol.com
Message-ID: <39p7hf$gga@newsbf01.news.aol.com>
Source record: 257182

Hello. I'm a new ham and I'm VERY interested in trying to contact Mir and the shuttle (when sarex is used of coarse!).
My question is, what is the PROPER procedure for calling these craft? Is it a regular call (their callsign then "this is" my callsign)? Maybe "shuttle atlantis" (or whichever) "this is my callsign"? I want to make sure I do it properly.
I have an HT and I understand they can work but I may need higher power and a better antenna to increase my chances. I know the uplink is 145.550, I suppose I need to switch to the downlink after I make my call to hear their responce. What is the downlink frequency? Any help on getting me started on these contacts would be appreciated. My license should be here in about 5 weeks so I've got some time to learn what I need to know. Thanks!

Very good, very good. I like the fact that we could discuss Ham radio, and ONLY ham radio, not politics, well said, OM.

My ideas on Morse Code, well I think the code requirement is in fact, a good thing. I understand that some people do not desire to learn the code, but as someone further back said, I had no need to learn about space communications, but it was on the test. I think that by keeping the code test in place, we expand the diversity of signal types and operations on the bands. I, like a lot of folks who had to learn code to pass anything higher than a NC tech, really HATED the code at first (and I mean I really hated it). Then, for some reason, I decided to give actual code operations a try and found I really enjoyed it. So much that most of my QSO's are code. For some reason, I feal I derive a greater sence of satisfaction from a code QSO because it takes a bit more planing and effort. I've also found that the ops are a lot less likely to be insulting and rude (it's kinda hard to be obsene using the code, unlike voice, where you tend to blurt things out).

As for my thoughts on a key choice, I like an Iambic paddle. I think using a straight key is just torture. It may help to build your recognition of proper spacing, but I feal that enough copy practice can do this also.

Hello, all:

Since XMas is coming up (:-) I'm looking for recommendations on keys -
both paddles and bugs. Any suggestions on what your preferred key is,
for around $100.00? I'm currently using a set of cheapie MFJ paddles,
but have been looking at the Vibroplex offerings, as well as those by
Jones, etc.

Thanks!
- Rich

2094. Omni VI RX noise

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-09 07:15:14 UTC
From: milewski@oregon.uoregon.edu
Message-ID: <milewski-091194000044@lanrover1-4.uoregon.edu>
Source record: 257198

I'm using a Ten Tec Omni VI with an Astron power supply.

Recently I've been paying attention to a constant noise level in the receiver. It's basically hiss type static sounding very much like the bands sound when they're noisy.

The only catch is that I can disconnect the antenna AND the ground and I'll still hear this at S2 to S3 (on the meter). Furthermore, at times it can swell to almost S9... again with the antenna disconnected.

In many instances, I'll also get static crashes, just as you'd hear on 40 and 80 meters. These too, can reach to S9 on the meter.

I've tried turning off all the circuit breakers in the house except for the one that powers the rig and there has been no difference.

Occasionally, the noise will disappear completely, although this is pretty rare.

Ten Tec's service department suspects it's the Astron RS-35M power supply that's the culprit. Has anyone else experienced anything like this?

Thanks,
Steve

Message-ID: <1994Nov9.094419.1@skcla.monsanto.com>
Source record: 257102

If the voltage in Australia is 230/240 vac, why can't you simply split the circuit into two 115/120 vac circuits? ie. is the voltage between a hot leg and ground 115/120 vac and the voltage between each hot leg 230/240 vac?

>or the suffix of their callsign. Here in Boston, we allways (most of the
>time :-) give our callsign as part of handing it back to net control after
>the last transmission in an exchange...

We were instructed to use tactical callsigns -- For example, I worked Mile 16 at the 59th Street Bridge. We had people on the bridge, the ramp, the base station (inside the bridge) and the water station on 1st Avenue. Our tactical calls on the Mile 16 2m Simplex were '16 Bridge', '16 Ramp', '16 Base' and '16 Water', respectively. I worked the medical net for Mile 16 and I always contacted net control as 'Mile 16' or simply '16'. These procedures definitely made operations *much* easier!

No, not in your teeth...

I was in Central Park on Sat, 05 Nov 1994 to help set-up net control for the New York City Marathon and I kept my eyes and ears open to learn something. In one of the communication trailors there were a half dozen or so 440 transceivers. When they tested transmission, there was severe intermod. So, one of the volunteers trots out to his car and returns with several 'cavities' and a piece of test equipment. I was watching from the door of the trailor and it seems like what he did was tune the cavity to filter out the frequency from the adjacent radio. He then installed the cavity between the antenna feed and the transceiver. He did the same on the other transceiver. When they tested transmission again, it was clear as could be.

Can someone give me a more detailed explanation of what they did?...

> should or should not use a "switching power supply" from a PC
> for powering a radio? What are the differences between the P/S's
> that I use and the ones in PC's?

The +5 volt rail will need a dummy load in order for the +12 volt
rail to work correctly. Apart from that, it ought to work, but
remember the current available from the +12 volt line of the average
PC supply is only 5 amps or so.

Steve, I am no whiz at this, but I would suggest turning all power off and
trying to connect to a 12v battery. This would eliminate any internal
noise generated by household appliances, etc.

I don't know how close you are to other houses, but some noise could be
coming from adjacent houses.... they don't even have to be too close by.
Could the noise be coming from the microprocessors???

Amen. The Hamtronics stuff is junk, full of spurs when they work, and
unreliable to boot.

>I've subsequently purchased an ICOM. Its wouldn't be my first choice if I
>wanted all sorts of CB bells and whoops. But, I don't. And, it works fine,

The Icom is barely a notch above junk. The receivers are intermod prone,
like most Japanese equipment, and the transmitters aren't very solid thermally.
A good Motorola or GE will beat the pants off of an Icom, and costs nearly
nil surplus as well. Well, the Moto Radius repeaters aren't so hot, but ones
made from Micors sure do the job, and GE Exec II or Mastr II units are
absolutely bulletproof. My machine is made from a MVP with an Exec II PA
mounted externally. It's controlled by an S-Com controller, and uses a
db Products duplexer feeding a Comet repeater antenna. It's mounted at
the 970 foot level of a TV tower, just 70 feet from 618,000 watts ERP of
broadcast signal, with no desense problems at all. Total system cost
was about $500. I haven't even gone to the site this year. It just works
and works and works. (Good thing too, it's a long way up that tower.)

>getting me started on these contacts would be appreciated. My license
>should be here in about 5 weeks so I've got some time to learn what I need
>to know. Thanks!

Ok, when your prediction program says your station is in the footprint
of MIR or Shuttle, listen on 145.55 MHz. If you hear nothing after a
reasonable period, give a standard call, IE U5MIR this is WA4XYZ.
For MIR, you call on the same frequency since they operate simplex.
For Shuttle, you transmit on a designated uplink frequency, usually
in the 144.91 to 144.99 range. That will be announced before the mission.
Do *not* transmit on the Shuttle downlink frequency, they don't listen
there, and it will annoy others trying to copy the Shuttle.

If, on the other hand, you do hear something when you monitor 145.55 MHz,
should be either the Shuttle or MIR, listen to what's going on. Usually
they will be in QSO with another station. Wait until they finish and then
transmit just your callsign on the uplink frequency 2 or 3 times. If they
hear you, they will respond. There may be quite a few other stations calling,
and they may respond to one of them instead. Wait until that QSO is over
and try again. They may be operating packet instead of voice. If you hear
packet signals, try to contact them via packet. They won't be listening
for voices at that point.

Keep your calls short, and speak clearly and distinctly, listen to VOA
to learn how this should sound. In the case of MIR you are dealing with
non-native speakers of English. Many of the MIR operators only know
"aviation English". Phonetics should generally be avoided as time wasters.
If you are strong enough to copy, and you speak clearly, there will be
few errors. Only use phonetics if they mangle your call on the first
try. Use only standard phonetics. If you speak fluent Russian, use
that with MIR, it'll give you a real edge. If there isn't an intense
pileup, the MIR operators often like to chat with operators who can
speak their language. They aren't trying for DX awards, and they're
up there for a *long* time.

Shuttle operators generally *are* trying to rack up the contacts due to the short duration of their missions. This is for the benefit of *ground* stations not for their benefit. Be brief with them and let them move on to servicing other stations.

Do you believe morse code should continue to have a "veto status" over all other modes? For instance, you did not need to learn about space communications, even though it was on the written test. You could have passed the tests without getting a single question about space communications right. This is not true of morse code.

I enjoy SS because the exchange gives me a better chance against the big guns - I can come closer to their QSO rate, and feel like I'm more in the contest.

A friend purchased one for me as a gift a couple of months ago. I believe
they had them for less than $20. It lookes like it's made by Comet, they
have one in their catalog that looks identical to the RS unit. Used it a
couple of times and appears to work just fine. They maybe harder to find
now, but they may still carry the discounted price if you find one.

Regards

Ken

I would like to thank everyone that responded directly to me. We have lots
of info for the hearing.

It looks like there will not be much of a problem at the distance my brother
is living from the proposed site.

Several people said that if there is a problem that the station likely would
be willing to help with filters for any cheap radios that pick up the station
incorrectly. As the station is moving the tower due to public pressure I
would guess that they would want to make their new neighbors happy.

Again thank you for your responses.

I don't know how this compares to the rest of the world, but I took
Novice/Tech exams in August, then started CW study. Passed 13 WPM on
10/8. I'm 58.

BTW, I prefer the term "chronologically gifted" . . .

>: control. I have purchased a buffered 16550 type serial card in

Have the same problem here. Occasional "unable to link HF radio" messages on boot up. Also from time to time when I do an "ALT A" to grab frequency on a dx spot it fails to get the VFO frequency or gets it wrong i.e. listed as "708.45 instead of "7008.45".

Equipment here is :

Rig: TS-850s (1.5 years old)
Interface: DX Solutions CT-232 (mfg. by KU4J)
Computer: 25 mhz, 386/387 clone. Has built in serial interface but I am currently using a card interface (I have the problem with both). Radio is on COM 1, TNC is on COM2, Modem on on COM 4, Printer on LPT1 and CW keying interface on LPT2, Bus mouse (IRQ2, I think). I tried switching com ports around no difference.
Software: DX BASE 3.0

While I love MY DX Base 3, I don't plan to upgrade to 4.0, till its been around a while. Also the file closing stinks. I lost my log files more than once because I powered down before I backed all the way out of the program. Needless to say I back up often using PKZIP. Also the file up date routine sucks. If I make one correction on an old entry the darn thing has to re-look at all 14,000 qso's in the data base, takes forever on a 25 Mhz machine.

Tom,
Good luck with talking to MIR, I have heard packet broadcasts from
time to time from them when I was in Alice Springs - haven't tried
since moving to Canberra. NOTE 145.550 is the DOWNLINK frequency.
Suggest you listen on this frequency and they will tell you the
uplink freq that they are using. Also I have heard that MIR has some
battery problems for HAM stuff, so they may not be working at all at
present - or in limited areas.

>transmission again, it was clear as could be.
>
>Can someone give me a more detailed explanation of what they did?...

He did exactly what you thought he did. He installed notch cavities in
the transmission lines of the two radios so that the cavity rejected
the signals on the frequency of the other radio. A single notch cavity
can attenuate the frequency to which it is tuned by 50 db or a bit more.
It offers nearly no attenuation at other frequencies. By knocking down the
signal from one radio trying to enter the receiver of the other, he removed
the desense and intermod problems caused by the too strong signal.

He could have alternately inserted *pass* cavities tuned to the
frequency of the radio in whose transmission line it was inserted.
This kind of cavity passes the frequency to which it is tuned with
very little attenuation, but offers attenuation at all other frequencies.
The problem with this solution is that it's hard to get a narrow passband
with steep skirts. Ultimate rejection is rarely better than 30 db with
a single cavity, and the passband is often 10% of the fundamental frequency.
This wouldn't work very well for two signals closely spaced in the same band.

The reason cavities are needed is that current Japanese radios aren't
designed to reject off channel signals entering the RF amplifier
and first mixer stages. In fact, most of them are designed deliberately
to receive signals over a wide span of frequencies because hams appear
to want wideband scanners that incidentally function somewhat like
communications equipment on occasion. Thus the front ends of the radios
don't reject off channel signals, and desense and intermod are the result.

There are two ways of dealing with desense and intermod problems. One
is to prevent the offending signal from entering the radio. This is
what the external cavities did in this case, and is what the helical
cavities built into in a well designed communications radio, like a
GE Mastr II, do. Of course it doesn't have to also function as a
wideband scanner, as the Japanese radios do. Though in this case since

the offending signal was actually *inside* the ham band, filtering of the radio front end with bandpass circuits wouldn't have helped in any case.

The second way to avoid the problem is to make the front end components "stiff" enough to not overload and distort when offending signals get in. This latter costs money and *power*. The standing current in the front end transistor would need to be 100 mA or more to prevent the bias from being shifted into the non-linear region by a strong off channel signal. This level of current would eat portable radio batteries in a hurry, and generate quite a bit of heat too. High standing currents can also add *noise* to the receiver and make it less sensitive.

For out of band signals, like paging transmitters and other commercial signals, sharp steep skirted bandpass filtering in the radio front end is the best answer. For in band signals, tunable notch filters are the best solution. That's what was done here.

Everyone gets too hung up on the word "country". Perhaps they should
change it to "DXCC Areas" or "DXCC entities" and there would be a lot
less arguing and confusion over this issue.

How one "comes off", like beauty, is often in the eye (or mind) of the beholder. These days, it seems, hypersensitivity is rampant. Personally, I would choose to reserve my energy for responding to those cases where the _intent_ showed malice. Taking one's self (or others, for that matter) more seriously than warranted is self destructive.

I use a Vibroplex Presentation I bought in 1963, but just about any Vibroplex bug suits me fine. You might find a good used one fairly cheap; if you have an option, go for one with a jeweled movement. If you're buying new, I think the basic "Original" is around $100 but I don't know if the movement is jeweled; you might have to go for the "Original Deluxe" for that (more money; $120 sticks in my mind, but that may not be accurate).

Can't speak to keyer paddles of any type; I've never used a keyer. Sorry.....

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial BBS, *(205) 409-9280*, and are updated daily (when possible). Documentation and tracking software are also available on this system. As a service to the satellite user community, the most current elements for the current shuttle mission are provided below. The Celestial BBS may be accessed 24 hours/day at 300, 1200, 2400, 4800, or 9600 bps using 8 data bits, 1 stop bit, no parity.

Element sets (also updated daily), shuttle elements, and some documentation and software are also available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

I have a home-built supply. It consists of a 36-volt 25-amp center-tapped transformer with a 7812 regulator running 8 2N3055 pass transistors. It works OK with a 30 amp load, and stays reasonably cool.

I'd recommend building your own supply. It's a good educational experience, and you can find everything you need to know in the ARRL Handbook.

Message-ID: <9411091320.aa15939@COR5.PICA.ARMY.MIL>
Source record: 257219

I also use DXBASE 3.0 with an Icom IC-765. I understand why you're having the "Unable to Link Radio" message. This will always happen when the radio is switched off *OR* when you're spinning the tuning knob, changing bands or modes at the same instant the comm interface routine is attempting to initialize. IMHO, its a minor problem and the solution is easy (rule #1 in software engineering): Don't do that.

I initially built the rather trivial discrete transistor interface from a circuit in QST. Since there was no means to buffer the data from the radio, the failures you refer to were more common. I replaced that interface with one that uses a MAX-232 chip, which provides buffering of the data among other things. I never had any problems with the primitive interface and CT. I suspect DXBASE is looking at the RTS, CTS, or DTR lines, whereas CT's COMTSR programs use XON/XOFF protocol by default.

The one thing I wish Sci.Sol. would do is allow baud rate selection as an option the user setup of DXBASE. The Icom can do 9600 baud, and so can CT and most other programs. But, no such luck in DXBASE, we're "hardwired" to a rather slow 1200 baud. Anyone listening at Scientific Solutions??

My hardware setup is as follows: 386DX/33, Mouse on COM1 std IRQ, KAM+ TNC on COM2 std IRQ, IC-765 on COM3 IRQ 2/9, internal Boca 14.4kB modem on COM4 IRQ 5, Printer on LPT1, CW keying and Contest Voice Blaster PTT and Record control on LPT2, Sound Blaster Pro (8bit) card on IRQ7 DMA channel 1.

I am trying to find out what would be the most efficient ways for VEs to handle all the paperwork during the licensing exam session. I am a newly accredited VE, and we administered our first exam session last night. There was no major disaster, and I have just sent all the necessary materials, both used and unused, to the ARRL/VEC. However, we got a bit disorganized when nine candidates turned in answer sheets one after another, and four VEs had to grade them, and hand other exam elements, and also had to issue CSCEs.

I would very much like to know how experienced VEs handle their paperwork efficiently. It is probably just a matter of common sense, and there are probably more than one best way to do this, but I would appreciate any tips from other VEs, or even from any examinees who could suggest anything for us. Please send your e-mail directly to me. Thanks.

I say there should be a morse code minimum like the 5 wpm, but after you pass that give a little more involved written or longer written. If you can only go 5wpm what's wrong with it???? I got my tech/- and then upgraded about three weeks ago. I thoroughly enjoy code and it is getting faster although not much, but I am working on it.
Code should NOT be totally abolished, but who really cares who can go 13 and who can go 20 or even 30-40 for that matter.

I want to switch Instant Track's full-screen display to a window (pressing Alt-Enter) and then retrieve data from my QRZ CD-Rom.

The Instant track display freezes as soon as I press Alt-Enter, before I even start the QRZ application. The computer tells me I need to modify a PIF file, but I haven't figured out what values to use in the PIF file editor.

Is there a way to make Instant Track run (real-time, not frozen) from a window in order to simultaneously use the QRZ retrieval program?

2132. More on logging programs

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-09 20:49:34 UTC
From: n1ist@netcom.com
Message-ID: <n1istCz0puM.5s0@netcom.com>
Source record: 257080

Two weeks ago, I posted about my problems with the Logic logging program, and its copy protection scheme. I had asked for some suggestions for replacement programs, and got the following list:

N6TR
CT
LOG-EQF
WJ2O Master Log
Hyperlog (2)
LOG Plus (3)

(CT and TR are both contest loggers, and I need a general logger that is set up to handle contests. I downloaded a copy of LOG-EQF, but haven't got around to looking at it yet.)

Four people agreed about how rediculous the 'Insert License Disk every time the system config changes' copy protection is (after all, your name, call, and address come up whenever you start Logic), and that it is the only program that they know that has this 'feature'.

Three people wondered how I could lose a disk that is needed all the time - easily. The program disks were nicely filed in the pocket in the manual. The license disk, last time I saw it, was sitting on top of the PC, left there after the last time Logic wanted it. It probably is now behind the fully loaded 6' bookcase or under the Vax.

The problem (for me) has been solved, since Dennis changed his mind and sent me a replacement license disk. I thank him for his support in this matter. However, I still don't like this copy-protection scheme. That is really a shame for such a good logging program.

73, and good luck in the contests.

Jamie Tan (jtan@porgon.camb-lads.loral.com) wrote:
: Boston area Hams,

: I know two repeaters in Boston area: 145.23MHz(-600kHz) and 146.64MHz
: (-600kHz).
: Does any of the two repeaters offer Phone Autopatch service?
: If yes, how to access?, or where to get the info?

Neither of these repeaters has an autopatch. At one time the .64 machine had a patch to the state police ONLY, but I'm not sure if this is still true, nor do I know how to access this.

: Are there other 2-meter repeaters in Boston area (with or without autopatch)?

The MMRA (Minuteman Repeater Assn.) operates a number of machines around Boston, but I think all of them are out of strict "local" phone range (not sure, I'm not an expert on this). Access requires MMRA membership last I heard.

There are no open autopatches in Boston that I know of, on 2 or 440.

Hope this helps,

- Andrew, aa1hx

2135. Morse exclamation point?

->Was I the only one who noticed that people weren't ID'ing on the nets?
-We were instructed to use tactical callsigns. These procedures definitely
-made operations *much* easier!

I agree, tactical calls make things much easier for the net (net control
doesn't have to remember who is where - I was one of the net controls for
the Boston Marathon, and I appreciate that). However, *you still have to
ID every 10 mins or at the end of a QSO* to satisfy the FCC. Since you
probably won't be calling back to net control every 10 mins, we give our
complete calls as part of the final handoff back to net control, i.e.
n1ist, mile 16, out. Net control also has to remember to ID as well.
Another option I have seen used is for net control to have everyone ID
at once every 10 minutes, but that isn't as clean.

SB QST @ ARL $ARLB090
ARLB090 FCC sets 2400 mHz date

ZCZC AG55
QST de W1AW
ARRL Bulletin 90 ARLB090
From ARRL Headquarters
Newington CT November 10, 1994
To all radio amateurs

SB QST ARL ARLB090
ARLB090 FCC sets 2400 mHz date

FCC sets 2400-MHz date

The FCC has set December 19, 1994, as the comment date for a Notice of Proposed Rule Making to convert a block of spectrum from federal government to commercial use, including two UHF bands shared by Amateur Radio on a secondary basis with the government.

The full text of the NPRM, released by the FCC on November 9, is available from ARRL Headquarters on the HQ BBS, at 203-666-0578, and also from the ARRL Internet Infoserver, infoarrl.org (see October 1994 QST, page 43). The file name is FCC94272.txt.

The proposal would allocate 2390 to 2400, 2402 to 2417 (both shared by amateurs), and 4660 to 4685 MHz to the Fixed and Mobile Services. The FCC is required by the Omnibus Budget Reconciliation Act of 1993 to adopt rules for such a reallocation by February 10, 1995.

The FCC said it received a number of responses to its Notice of Inquiry on the proposed reallocations, including formal comments from ''the amateur community'' (primarily the ARRL). The reply comment date on the NPRM is January 3, 1995.

More information was in October QST, page 83, and in December QST, page 87.

The problem with this line of reasoning is that CW is still in large
use today. According to my counts (my QTH is in the Central Pacific)
nearly 50% of the HF comms are conducted via CW. That's a darn good
reason for still requiring a knowledge of code to get an HF license.

It makes sense to require skill exams for the 2 or 3 most used
modes in use (on HF); consider the skill exams for SSB (speech)
and packet (typing) as being waived.

Actually I always thought that a good method of licensing
amateur radio operators would be to present them with a
a set of components and some tools. Then have them build
a small xmitter/rcvr. Nothing fancy, just a *very* basic
circuit or three that would produce RF for a frequency
counter, then check the signal with an oscilliscope. Wouldn't
have to be perfect of course, but crudely functional.
There would be dozens of possible part combinations
handed out, all with the potential to build different
xmit/rcv circuits.

Then add in the written test and the minimum code.

Could I pass this test now? No, I'm just starting in
homebrewing. But we all know there's a big difference
between book knowledge and applying the Smoke Test to
a project. I think it would work quite well. More
expensive to administrate, but worth it. I believe
some countries use to do it this way, may still today.

So what do you think? Should I be donning asbestos
underwear? :)

From: ahall@umassmed.UMMED.EDU
Message-ID: <9411100226.AA26964@umassmed.UMMED.EDU>
Source record: 257096

I just purchased a Central Electronics Transmitter model 100V. I have
already come up with two problems which I am hoping someone in net land
can help me.

First: I need information on restringing the megacycle indicator and
any information on what the pointer looked like. This unit
is missing both the string and pointer.

Second: I am looking for the audio limiter that goes with this unit. For
some reason it was removed and a jumper was used in its place.

Third: If there is someone out there that is still using or is very familar
with this unit I would like to get intouch with you. I am hoping
to get this unit on the air and use a Hammarlund 170A as my receiver.

Thanks,
Art Hall (WB3EJA)

(New York, November 9, 1994) Broadcast band DX'ers are in for a rare treat this weekend. Word was received today from Mr Bill Krause, chief engineer for New York's WABC radio (770 khz) that the station would go silent for approximately 3 hours to perform antenna maintenance. The scheduled shutdown will take place from 0100 a.m. - 0400 a.m. EASTERN time (0600Z - 0900Z)on the morning of Monday, November 14, 1994. (Note: Most Eastern DX'ers would regard this as very late Sunday evening!) This temporary shutdown will provide Eastern listeners a rare chance to log KKOB in Albuquerque, NM. As this message is being released, the IRCA'a JD Stephens will contact KKOB to investigate the possibility that KKOB may run a special DX test. As KKOB normally runs a directional pattern beamed primarily Westward, the possibility of an omni-directional pattern will also be discussed. Those listeners who are interested should tune in to SPECTRUM, aired on shortwave station WWCR in Nashville, TN. A final announcement will be made at the beginning of their broadcast, on Saturday evening November 12 at 10p.m. Eastern (0300Z) on a frequency of 5.065 mhz. SPECTRUM, by the way is a weekly program for the radio enthusiast, covering related topics from "DC through Light." Reception reports can be mailed to KKOB @ 77 Broadcast Plaza, Albuquerque, NM 87103.

Updates to this message will also be posted on the Monitoring Times BBS as they become available. The MT BBS is available weekdays from 6:30 p.m. to 8 a.m. (Eastern), and weekends 24 hours a day @ (704) 837-9200, (704) 837-7081, or (704) 837-5957. The BBS supports standard speeds with modem settings of "8N1". What a way to start a BCB DX season!

Hello,

I'd like to sell my Radio Shack DX-390 radio. It works
perfectly, and has for nearly two years; I'm selling it because I got
a better radio. It's the same model as the Sangean ATS-818.

I'd like to get $130 for it, or the best offer I get. I'll
pay shipping and handling.

I'm using a Bencher Paddle with the MFJ keyer that sits on top.
I like it because it saves desk space (which is at a premium
in my shack) and is simple. The only problem I had with it was
the way I grasp the key. When I held it, I completed the a
connection between the two posts and the key would stay down
(in other words, the elec. keyer would key the rig constantly).
Grounding the key to the rig fixed this problem.

This is true, but the code test has become easier to pass over the years. First it was a send and recieve test. Then they went to just a recieve test. Then they had a fill in the blank test. Now it's a multiple choice test (the one I took) I think by softening the way the testing is done has made it easier for those who lack the code skill, to pass the test. As for veto status, I still have mixed feelings. I think the hobby as a whole would benefit more from a greater understanding of electronics and operations, than the ability to do code. But the code test offers a balance. Some people are a quick study on book stuff. Others are good with a skill.

Perhaps the option of another written test instead of the code? I don't know, I still have mixed feealings.

Wayne,

If you are not running IT in a graphics mode, you should be able to get it to run by pulling down the system menu and picking Settings... This will open a dialog box, where you can check the box marked "background". This will allow IT to run even if it does not have the input focus at the moment. This will last only for the current invocation of IT in that DOS box. If you want this to happen automagically, you will need to use the PIF editor to set up a new .pif file that describes the command line you need to run IT, the start-up directory (i.e. the directory IT was installed in), and then you can check the background box. Save the .pif as it.pif (for instance) and then you can create an icon for it by using the File New item in the Program Manager system menu.

Start IT using the icon that is associated with the .pif (or by starting the .pif), rather than running it.exe directly. This will use the settings in the .pif, rather than guessing (usually badly) about how you want to run IT.

I've found that trying to do this with IT running in graphics mode is usually no good, as Windows doesn't like a DOS process attempting to re-program the color palette registers in high-res mode, or some such. It usually suspends the program, and won't start it again unless you run full-screen mode for that DOS program. I've heard that some folks have had better luck with some 3rd party display drivers, but my Fahrenheit 1280 board doesn't seem to be so lucky 8-).

I've found it real handy to turn on the bottom line of 'favorite' satellites and move the window to the bottom of the screen, then let it peek out from under the program manager window while running other stuff...

Good luck,

Dave, WB4SBE/8, wb4sbe@amsat.org

Many folks become less proficient with cw as they age, but there are exceptions to the rule. Back in the 1970s Bill Eitel, W6UF (one of the founders of Eimac) got interested in keyboards and pushed his own speed to rather amazing levels, even in his late 60s/70s. He founded the Five Star CW Club, with membership conferred after successfully passing a test at 80 (yes, eighty) words per minute. He finally became a Silent Key in the 80s, and the Five Star CW Club disappeared with him, although some of the old Five Star speed merchants are still active on the air.

got around to looking at it yet.)

Four people agreed about how rediculous the 'Insert License Disk every
time the system config changes' copy protection is (after all, your name,
call, and address come up whenever you start Logic), and that it is the
only program that they know that has this 'feature'.

Three people wondered how I could lose a disk that is needed all the time -
easily. The program disks were nicely filed in the pocket in the manual.
The license disk, last time I saw it, was sitting on top of the PC, left
there after the last time Logic wanted it. It probably is now behind the
fully loaded 6' bookcase or under the Vax.

The problem (for me) has been solved, since Dennis changed his mind and
sent me a replacement license disk. I thank him for his support in this
matter. However, I still don't like this copy-protection scheme. That
is really a shame for such a good logging program.

73, and good luck in the contests.

Everyone gets too hung up on the word "country". Perhaps they should change it to "DXCC Areas" or "DXCC entities" and there would be a lot less arguing and confusion over this issue.

Subject: Procedure for calling Mir/Shuttle help needed

Hello. I'm a new ham and I'm VERY interested in trying to contact Mir
and the shuttle (when sarex is used of coarse!).
My question is, what is the PROPER procedure for calling these craft? Is
it a regular call (their callsign then "this is" my callsign)? Maybe
"shuttle atlantis" (or whichever) "this is my callsign"? I want to make
sure I do it properly.
I have an HT and I understand they can work but I may need higher
power and a better antenna to increase my chances. I know the uplink is
145.550, I suppose I need to switch to the downlink after I make my call
to hear their responce. What is the downlink frequency? Any help on
getting me started on these contacts would be appreciated. My license
should be here in about 5 weeks so I've got some time to learn what I need
to know. Thanks!

How one "comes off", like beauty, is often in the eye (or mind) of the
beholder. These days, it seems, hypersensitivity is rampant.

Personally, I would choose to reserve my energy for responding to those
cases where the _intent_ showed malice. Taking one's self (or others,
for that matter) more seriously than warranted is self destructive.

Actually I always thought that a good method of licensing
amateur radio operators would be to present them with a
a set of components and some tools. Then have them build
a small xmitter/rcvr. Nothing fancy, just a *very* basic
circuit or three that would produce RF for a frequency
counter, then check the signal with an oscilliscope. Wouldn't
have to be perfect of course, but crudely functional.
There would be dozens of possible part combinations
handed out, all with the potential to build different
xmit/rcv circuits.

Then add in the written test and the minimum code.

Could I pass this test now? No, I'm just starting in
homebrewing. But we all know there's a big difference
between book knowledge and applying the Smoke Test to
a project. I think it would work quite well. More
expensive to administrate, but worth it. I believe
some countries use to do it this way, may still today.

So what do you think? Should I be donning asbestos
underwear? :)

Subject: Re: Maws Coad and Spelinge

Very good, very good. I like the fact that we could discuss
Ham radio, and ONLY ham radio, not politics, well said, OM.

My ideas on Morse Code, well I think the code requirement
is in fact, a good thing. I understand that some people do not
desire to learn the code, but as someone further back said, I
had no need to learn about space communications, but it was on
the test. I think that by keeping the code test in place, we
expand the diversity of signal types and operations on the
bands. I, like a lot of folks who had to learn code to pass
anything higher than a NC tech, really HATED the code at first
(and I mean I really hated it). Then, for some reason, I

decided to give actual code operations a try and found I really
enjoyed it. So much that most of my QSO's are code. For some
reason, I feal I derive a greater sence of satisfaction from a
code QSO because it takes a bit more planing and effort. I've
also found that the ops are a lot less likely to be insulting
and rude (it's kinda hard to be obsene using the code, unlike
voice, where you tend to blurt things out).

As for my thoughts on a key choice, I like an Iambic paddle.
I think using a straight key is just torture. It may help to
build your recognition of proper spacing, but I feal that
enough copy practice can do this also.

Do you believe morse code should continue to have a "veto status" over
all other modes? For instance, you did not need to learn about space
communications, even though it was on the written test. You could have
passed the tests without getting a single question about space
communications right. This is not true of morse code.

2162. Is it just me?

Source record: 257056

This is a rant. If you don't want to deal with it, hit 'n' now.

Is it just me, or is there really an (in my opinion) alarming number of people asking questions like;

Can someone draw a bridge rectifier for me?

How do I hook up my microphone?

Will my power supply I use on 2 meters work on HF?

When I was a Novice, I sat down with my Elmer and we designed a CW transmitter. Last I heard, it is *still* on the air. Over the years, I used to play with old [government] surplus gear, and to make it work you had to draw your own schematics and then figure out what was missing. When a piece of equipment I owned died (and at the price I could afford at the time, it was often), I had to reverse engineer the circuit to find out what it was suppose to do, then what it wasn't doing, and finally how to make it go back to doing what it was supposed to.

As hams, we were expected to be able to look a piece of equipment and just "know" how it worked, and be able to sketch out a block diagram of what it did. And be able to link items on the diagram to physical parts on the chassis. If we didn't have a schematic, no problem, we'd *make* one. If a piece of equipment had low performance, we modified it to improve it.

Nowadays, I keep running into hams that don't know which pin on their micro-phone is the PTT line. Or don't know what twinlead is. Or how to test a piece of coax after the radio gets "strangely silent". And they have 2x1 or w and k 1x3 callsigns. What happened to my hobby? What happened to the people that knew what they were doing? What happened to the people that really could function at field day when a rig broke, or an antenna fell over or the generator quit running.

I think I know what happened. Somebody has been pushing quantity at all cost. The people that have made a career out of making hams. I remeber when Extra Class meant something, now it just means you've memorized a few extra answers and managed to guess correctly enough prosigns and locations on the code test.

Yeah, I'm an Advanced Class, I got it when you had to work for it. I took a break from amateur radio to raise a family. I come back and this is what I find. Sometimes I'm embarrassed to admit being a ham.

2165. No-Code Techs & CW (again)

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-10 11:06:25 UTC
From: jmbouche@unix.amherst.edu
Message-ID: <39surh$i1r@amhux3.amherst.edu>
Source record: 257117

I've been out of hamming for 20 years, after spending many a pleasant evening in my youth working the world on 1/2 watt CW as WA1ZJB. The license lapsed, marriage and jobs and life took over, and now 20 years later I'm getting re-licensed. Last month I tested, attained Advanced theory and 20-wpm code, and will do the Extra exam in January, after I get my call letters and some operating time.
Those of you out there who are Generals or Advanced or Extras know that upgrading is not a matter of just memorizing some pool questions out of a Gordon West book (as good as those books are, they are meant to be a guide, not a primary source, and they are excellent guides). Reaching higher grades in Amateur Radio is the same as progressing in any other activity, whether you're a painter or a piano player. It takes commitment and work and most important, it takes a lot of time.
Amateur radio has certainly changed in 20 years. You won't find people sending 110-baud Baudot from a KSR33, a far smaller percentage of hams build their own gear, and the membership is far more diverse than ever. I for one am happy to see the institution of No-Code Tech as a way for people to get involved in hamming a step at a time. 25 years ago it was much harder to find hams who didn't work in electronics or technology fulltime, so that getting licensed was mostly code study and rules&regs. Today many more hams are real estate agents, truck drivers, English majors, computer users, people who see the value of ham radio but don't have the advantage of a great deal of technical experience. It's much more realistic for those people to be able to study one thing at a time, test one area at a time. First the Tech license, then some code, upgrade, some HF work, upgrage some more. I for one welcome those No-Codes into Amateur radio, and I hope that most of them are able to find the time to learn the code and more advanced theory

I don't believe the code should be eliminated as a requirement for upgrade. Too much great activity still revolves around code, as anyone who scans HF knows. It is not anachronistic, and I don't think it will be until the rest of the world is able to spend as much money on their gear as we in this country do. We are privileged to have so much disposable income and so much superb technology to spend on what for most hams is a hobby. I would miss the opportunity to communicate with those stations in Africa and Asia and the areas of the world where so many hams still are forced to rely on low power, low tech machines. In reading Part 97 during my license prep, I was struck by the number of times the words Amateur Radio SERVICE were used. Not once was it referred to as Hobby Radio.

There's a place in Amateur Radio for everyone. If No-Code privileges suit your needs, great. If you want more, like any other activity, the opportunity is there. Take it a step at a time, take advantage of all the help available out there, and get wherever you want to go. Good luck to all.

If you've read this far, you have more patience than the topic deserves.
Thanks,
Joe Boucher

I use the basic Vibroplex iambic paddles (black finger pieces with gray base and chromed mechanical parts). Unless you're heavily into chrome, I think this is the nicest looking configuration. The all chrome model w/ red finger pieces gets a lot of finger prints, while the matte gray base on mine doesn't show these smudges. Besides, black/gray/chrome is a nice combination.

My configuration DOES NOT have the jeweled movement. I've compared mine side-by-side to one with the jeweled movement, and couldn't feel a difference. I wouldn't spend the extra money unless you really like the look of a chrome base.

I thought the Bencher design felt about as nice as the Vibroplex, but I think the spring looks kind of cheesy. In my opinion, Vibroplex makes the nicest looking paddles.

}No, not in your teeth...
}
}I was in Central Park on Sat, 05 Nov 1994 to help set-up net control for the
}New York City Marathon and I kept my eyes and ears open to learn something. In
}one of the communication trailors there were a half dozen or so 440
}transceivers. When they tested transmission, there was severe intermod. So, one
}of the volunteers trots out to his car and returns with several 'cavities' and
}a piece of test equipment. I was watching from the door of the trailor and it
}seems like what he did was tune the cavity to filter out the frequency from
}the adjacent radio. He then installed the cavity between the antenna feed
}and the transceiver. He did the same on the other transceiver. When they tested
}transmission again, it was clear as could be.
}
}Can someone give me a more detailed explanation of what they did?...

Clay,

They did just what you described. Cavities come in various assorments.
Bandpass and Notch. The most popular is bandpass. Basically they used the cavities
to narrow the front end selectivity of the radio. What they were getting for
QRM was a result of overload of the front end. By reducing the radio's bandwidth
with the cavity, overload is reduced.

There is a secondary effect on transmit too. The broadband transmitter
noise is reduced also, further helping the situation.

73,

Bruce, WB4YUC, el YUCCO. . .

I agree with your latter statement, amateur radio is a service, a self-training service to meet national goals. However, while service to the nation can take many forms, being a hotshot Morse operator is no longer one of them. That era has passed.

That's not to say that Morse isn't still useful for Dx operating on the ham bands, but such games can still be conducted without a formal test. There's nothing that says you have to pass a government test to be a hotshot Morse operator. Amateur radio is supposed to be a *life long* learning process that is self-directed. If you want to learn Morse, you can.

The only reason for a government test is to use it as a forced recruiting tool for Morse operators. If the mode needs government force in order to remain viable, then perhaps it *is* time to retire it. But if you believe Morse offers enough to stand on its own merits, then tests should be irrelevant. The only relevant test is whether you can communicate with another amateur over the air.

Commercial Radio Exams at MIT

** MROP, GROL, GMDSS, Radar and Telegraph exams in Cambridge MA **

** Sat. November 12th 1994 **

The MIT Radio Exam Team will hold exams for all classes
of commercial radio license at 10 AM on Saturday November 12th
in Cambridge MA at 77 Mass Ave in MIT's Room 1-150.

We will conduct exams for the General Radiotelephone Operators
License, the Marine Radio Operators Permit, the Global Marine
Distress and Safety Systems Maintainer and Operator Licenses, the
Radar Endorsement and the Radiotelegraph operators Certificate.

Our next commercial exam session will be held at 10 AM on
Saturday January 14th in Cambridge MA at 77 Mass Ave in
MIT's Room 1-150.

A regular schedule of exams is planned for Cambridge MA on the
second Saturday of odd numbered months. For more information call
Nick at 617 253 3776 (9-5).

There is a $35 examination fee. Bring the ** original ** and a
copy of any commercial license or proof of passing certificates
you want to claim credit for. Also bring 2 forms of picture
ID, a black pen and a pencil. For all licenses except the GROL
there is an additional $35 regulatory fee, you must attach a check
made to the FCC to your successful application. For the
Telegraph exams bring 2 passport style photos in an envelope to
attach to your application

* The FCC has delayed the imposition of a regulatory fee on GROL
applications pending congressional instruction on how to treat lifetime
licenses. !!!

Copies of the question pools are available from the
Government Printing office or from W5YI at 1 800 669 9594.
This is probably the best study guide available for the
GMDSS, Radar and Telegraph exams.

* A comprehensive text book by Fred Maia and Gordon West
covering the MROP and GROL exam material is now available at
Radio Shack.

The General Radio Telephone Operators License is required to
service transmitters in the aviation, maritime and international

radio services. A Maritime Radio Operators Permit is required to operate radiotelephone stations aboard ships carrying passengers for hire and certain aviation and coast stations. Large ocean going ships will be required to carry two Global Maritime Distress and Safety Systems - operator licenses. A GMDSS Maintainer License is required to service GMDSS equipment. A Radiotelegraph Operators Certificate is required to be a radio officer aboard certain large ocean going ships.

Amateur Extra Class operators may be particularly interested in obtaining a commercial telegraph license as they will receive credit for the required class code exam. Bring your original amateur license and a copy to claim this credit.

The MIT Radio Exam Team operates under the auspices of the National Radio Examiners COLEM, part of the W5YI group.

I don't think anyone is advocating abolishing the code, just the testing
requirements.

I, for one, do care--but not as a licensing matter. I prefer to send
and receive code between 15 and 20 wpm. That's where I'm most
comfortable at. A little faster is good to help me build speed, and
slower is OK since it may be helping someone else do the same. Too fast
and too slow and it just isn't as fun...

(Just my two cents...)

>list I've seen. If not, why not?

I've seen it, but I don't remember what it is. I do remember it has six dits or dahs (like all the other punctuation). I believe there is almost everything you could think of in morse code, but a lot if it isn't used commonly, so it generally isn't in the character sets you will see.

Source record: 257030

Hi,

I would like to see if there is any interest in getting the hams from NT/BNR from the different divisions together for a special event weekend sometime in the future. I would be interested in the format that the Boeing Employees Amateur Radio Society (BEARS) club uses. And basically, what they do is publish an amateur special event station in the various ham magazines (many months in advance) and invite the ham community to work a number of BEARS in order to receive a Certificate and a QSL card in response to a SASE. Could we do something like this?

I can't do this by myself, but I would be interested in helping to kick this thing off.

Please let me know if there is any interest or support in this idea.

Scott, the only people who care about going 20, 30, or 40 WPM are those who wish to *use* Morse for communications. To those who merely need to get past the hazing exam, high speed operations are irrelevant. Since people who want to *use* Morse have to learn it anyway to do so, the test is irrelevant to them, and it is mere hazing for those who do *not* wish to use Morse. In 1991 according to the ARRL survey that was 62% of all amateurs who had passed a Morse test. So the Morse test is irrelevant to the 38% of amateurs who use Morse, and is hazing for the 62% who do not.

2181. non-sovereign DXCC "countries"

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-10 16:12:33 UTC
From: Wayne_Estes@csg.mot.com
Message-ID: <9411101005.ZM6496@SALCIUS2>
Source record: 257032

What annoys me is the seemingly arbitrary decisions of the DXAC.

Why does St. Paul island qualify as a DXCC country when it is only 10 miles
from Nova Scotia and Newfoundland?

Why was the recent DX-pedition to Fernando de Noronha disqualified?
DXAC says the operation was not in the wildlife refuge that was granted DXCC
status in the 1950's. But the operation *WAS* in the Fernando de Noronha
archipelago, 200+ miles from the coast of Brazil.

BTW, I agree that Scarbrough Reef should NOT qualify for DXCC status.
It's absurd to even ask for a submerged reef to have "country" status!

No, you are NOT alone. I too wonder how much longer the excellent hobby of ham radio can last now that the skills and knowledge that use to be required to obtain a license have been reduced to that required to "operate" a door-bell.

One must observe that the amount of surplus radio equipment available to those who would 'tinker' and build their own equipment is markedly reduced in quantity and simplicity. Surplus radio gear now is either highly digital, complex (harder to make it do something useful) or some computer hardware that isn't really useful to some 'kid' who is trying to make something.

I think we need to raise the entry level skills and really TEST for evidence of these skills. I am really saddened by much of what I read in the 'mags', here on the I.N., and what I hear on the air these days.

I really expect that we will soon lose the remaining freq's we presently have to commercial users (at least there is some intelligence evident in the their transmissions) and ham radio will be reduced to mobile or base station use of hand-held TELEPHONES ! That is about ALL of the skill level remaining in the hobby or in the direction it is going.

I worked hard to enter ham radio and flunked my first novice code test. I passed all of the code tests thru 20wpm the hard way by showing true proficiency (sp) by copying and sending 1 minute w/o errors and really studied to learn the theory necessary to earn an extra class rating.

Every baby learns to walk by trial and error and most of us walk today! Lets start expecting more instead of less knowledge of those who would join this wonderful hobby.

I have tried/owned a number of different paddles. Here is my take on them:
(in decreasing order of preference)

Kent - very fast, very nice and extremely light, The paddles are close together when compared to a Bencher and takes getting use to. The pivot is done using four sets of ball bearings. The adjustments are made using extra fine threaded screws and easy to set. I adjust them with contacts extra extra close with springs as loose as they get without sticking. I have no problem sending at 40+ wpm with these. My favorite. Construction: solid brass, crackled black finish base with plastic finger pieces.
Bencher - very much like the Kent except that adjustment is more difficult because it uses regular machine screws. I also find that the movement is not as free as Kents.
Einbau Wabbler - This is a mini-paddle from Germany that I use for mobile operation. I have it mounted on a leg clamp and it works very well. It is extremely well built, with no pieces that can fly off or get out of sorts. Solid brass with a diamond cut finish. Polished plastic finger pieces are deluxe. It is very small, and a delight to use. Not as fast as a Bencher.
Jones -I heard a lot about them but was disapointed with it. I have never owned one - just tried one for a while. Not as fast as the Bencher.
Vibroplex Iabic Standard - beautiful to look at but hard to adjust because of coarse screws and the large arms provide too much inertia for me to operate them fast. They are so beautiful to look at that I made a watercolor sketch of them for my qsl card. I just got my third batch of 2,000 cards printed. This time I got smart - There is no MODE column. Just "Confirming a 2-way CW contact...".

Does anyone have statistics on the pass/fail rate for the Tech test?
All I ever see is postings by people who pass it, which statistically
means that everyone passes it the first time - is this true?

Yes, I know about statistics (I am amazingly intelligent, remember?),
but I see plenty of "surveys" done based on people's postings on this
net (I've done one myself).

Does anyone actually know the pass rate for each of the written exams,
on a nationwide average, or at least for a statistically-meaningful
sample?

2189. TOKO transformers...

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-10 18:55:55 UTC
From: mikem@Ra.MsState.Edu
Message-ID: <39tqbr$dn@Isis.MsState.Edu>
Source record: 256980

Does anyone know anything about a company called TOKO.? They make rf transformers. I have the specs for building an rf transceiver using the MOTOROLA LM1871 rf transmitter/encoder and its companion receiver chip. They give several values for tunable inductors and transformers made by TOKO. They also specify a Q factor for the inductors and transformers and I don't know much about that. Does anyone know if I can possible substitute another transformer in the place of the TOKO transformers? The Q values they specify are 115 and 75. Any advice on this topic would be really appreciated.

mikem@nova.msstate.edu or moncrief@dial.msstate.edu

Source record: 257040

: Arthur Chandler (arthurc@crl.com) wrote:
: : Is it tougher to learn Morse code when you're ...um.... more mature?
: : :<) In other words, do younger folks have an edge when trying to learn
: : CW -- especially at the faster speeds? Or do you think that, given equal
: : desire, someone 60 could learn 13 wpm or 20 wpm just as fast an an 18
: : year old?

I thought I commented before, but haven't seen it appear ... so here
is my comment.

At the age of 65, my grandmother (WA7FFG) decided to become a ham ...
my grandfather (K7OQY) had just become a "Silent Key" and she was
hoping to continue with his/their on-the-air friendships AND because
she was very lonely.... so... she obviously had MOTIVATION.

With that "motivation" she passed her Novice/Tech licenses at 5 wpm.
She struggled but couldn't pick up much speed. So ... over a two
week XMAS vacation, practicing two or three hours at least, per day ..
she moved her speed from 5 wpm all the way up to 20 wpm... that's in
TWO WEEKS! I would not have believed it if I hadn't been there
with her helping her. Motivation and desire are clearly necessary
to learn CW and to increase speed .... but it very definitely CAN
be done even when starting at a later stage of life. Ever since,
I have found complaints that learning CW and/or increasing speed to
higher levels (5-13 wpm) to be completely hollow .... you simply
have to have the desire/motivation (IMHO).

Cheers

2191. GB2RS News 13th November 1994

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-10 19:13:10 UTC
From: dave@llondel.demon.co.uk
Message-ID: <784519990snx@llondel.demon.co.uk>
Source record: 257041
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.info

Good morning. It's Sunday the 13th of November and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

Now this week's headlines:-

Twenty people have won prizes in recent competitions

The RSGB apologises for a backlog in processing book orders

And the RA will shortly announce which organisation will be issuing amateur licences from next Spring.

We start this week with some prize winners:

The winner of the RSGB draw at the Leicester show is by Mr M C Eddyvean, G7SQF. He wins a Christmas hamper worth 100.

The winner of the RSGB 'Introduce a Friend' membership promotion draw is Mr T B Saggerson, G4WSE. He wins a scanner.

Major prize winners at the LIVE '94 Amateur Radio Village are: Mr J R Groves, G7SNZ who wins a TH-22E 2m handheld; Mr A Rowe, G6AVP, who wins a KPC3 packet controller; Mr J Irlam, G3JBT, who wins an HF-150 short-wave receiver; Mr M B Chapman, G4ZKE, who wins an Alinco VHF/UHF hand held; Mr S M Gambles, G4GI, who wins an FT-416 2m hand held; and Mr P J Holt, G8YQJ, who wins an IC-281H 2m mobile. Twelve runners up received RSGB or Practical Wireless subscriptions. All winners have been notified by post.

RSGB Headquarters apologises for the delay in despatching book orders recently. This has been due to the enormous demand for two new publications which has stretched resources somewhat. Every effort is being made to clear the backlog as soon as possible. Customers are asked to be patient as calls regarding late delivery just add to the workload.

The Radiocommunications Agency has stated that it will shortly be able to announce who will be dealing with amateur radio licensing when the existing contract runs out next Spring. Licensees will be written to individually by the RA with details of the new arrangements.

RSGB members are reminded that the ballot papers for Council nominations must be received at RSGB Headquarters by 12 noon on Tuesday the 29th of November. The ballot paper and proxy voting form are part of the Society's Annual Report and Accounts which was posted to all members on the 17th of October. Any member who has not received this document should contact Fay Huxley at RSGB Headquarters as soon as possible.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

From Ascension Island, N6TJ will sign ZD8Z from now until Thursday the 1st of December.

From St Christopher-Nevis, WB8GEX and WZ8D will sign V47NF and V47WZ respectively from Saturday the 19th until Sunday the 27th of November on all bands from 160 to 6 metres, on SSB and CW.

And from Cayman Islands, W5SJ will be active as ZF2SY from Saturday the 19th until Wednesday the 23rd of November. Activity will be mainly CW on the WARC bands also 40 and 80 metres.

Now the rallies we know of for today, Sunday the 13th of November:

The Barnsley & District Amateur Radio Club Amateur Radio Rally is being held at the Metrodome Complex which is in Barnsley Town Centre, next to the bus and railway interchange. Follow the 'Metrodome' and rally signs from junction 37 of the M1. The event features amateur radio and computer trade stands, clubs and groups, plus a bring and buy stall. There are ample parking facilities and a separate car park for disabled visitors.

The Donegal / Tir Conaill Radio Club Annual Mobile Rally is being held at Jackson's Hotel, Ballybofey, County Donegal. Doors open at 12 noon. The event features the stands and a junk sale. Refreshments will be available throughout the day.

The Midland Amateur Radio Society - Stockland Radio Computer Rally is being held at the Stockland Green Leisure Centre, Slade Road, Erdington, Birmingham. Doors open at 10am. The rally features the usual traders, local clubs and a bring and sell tables. Refreshment are available.

Next the two events we know of for next weekend, Saturday the 19th and Sunday the 20th:

Next Saturday, the 19th, the Carrickfergus Amateur Radio Group Rally is to be held at the Downshire Secondary School, Downshire Road, Carrickfergus, County Antrim. Doors open at 12 noon. The event features the usual trade stands and a bring and buy stall. Further details from Hugh, GI0JOF, on 01960 351807.

Next Sunday, the 20th, the Bishop Auckland Amateur Radio Club Radio Rally is to be held at the Newton Aycliffe Leisure Centre, Beveridge Arcade, Newton Aycliffe, County Durham. From the A1M take the A167 to Aycliffe town and follow the rally signs. Doors open at 11am, or from 10.30 for disabled visitors. The event features trade stands covering radio, electronic and computer interests, an RSGB Book and Information stand and a bring and buy stall. Refreshments will be available and talk-in will be on 2 metres, channel S22. Details from Mike, G0PRQ, on 01388 766264.

Now news of a Rally cancellation:

The Leeds and District Amateur Radio Society announces that, due to circumstances beyond its control, the Christmas Rally, scheduled for the 4th of December has had to be cancelled. Details from G0IBU whose address is correct in the RSGB Call Book.

HF contest news next:

The WAE RTTY Contest finishes today, Sunday the 13th, at 2359 UTC. See the November RadCom, page 19 for further details.

The RSGB 2nd 1.8MHz CW Contest will be held next Saturday, the 19th from 2100 until 0100 UTC. See the October edition of RadCom, page 81, for details on frequency, exchange data and category of entry.

Next some VHF contest news:

The next RSGB 1.3GHz and 2.3GHz Cumulative Contest takes place on Thursday the 17th of November from 2030 to 2300 UTC.

The fourth RSGB 432MHz Cumulative Contest will take place on Monday the 28th of November from 2030 to 2300 UTC. For further details of both of these Cumulative Contests see July RadCom page 82.

And now the solar factual data:

The period from the 31st of October to the 6th of November saw some very small solar flares, particularly at the start. Solar flux and geomagnetic levels have declined. At the time of preparing this bulletin geomagnetic levels were still very unsettled.

The sunspot indices have generally declined over the period, from 89 on the 31st, down to 39 by the 4th November, giving a mean of 64. Solar flux levels also declined every day from 97 units on the 31st of October, to 81 units by the 6th of November. The period averaged 88 units. The 90 day solar flux average on the 6th November was 81 units.

The geomagnetic field declined from 'sub-storm' levels with an Ap of 38 on the 31st, down to unsettled conditions by the 6th November. There was only one relatively quiet day - the 3rd, with an Ap index of 10; the period averaged an Ap of 21 units. The state has been 'mag alert' for most of the period. Not all of the x-ray flux data is to hand but levels were declining, and were at A8.5 on the 1st of November. The aa indices, as reported by the British Geological Survey for the period from the 25th to the 31st of October, started at quiet levels. The daily index was down to only 8.0 nanoTeslas on the 27th but by the morning of the 29th, levels increased considerably with the magnetic storm, reaching 194 nanoTeslas (about K7) by mid-day,. Storm levels were maintained to the end of the period which averaged 35.4 nanoTeslas, about K4.

The monthly sunspot number for October was RI 43.8, with a maximum of 60 on the 14th and a minimum of 16 on the 1st, 2nd and 3rd. The smoothed sunspot number for April 1994 was 33.8 +/-5.

I'll repeat the figures. Spots - 64; Flux - 88; Ap index - 21; X-ray flux about A8.5. October spots RI 43.8

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period 31st of October to the 4th of November, are still declining and averaged 8.2MHz. The darkness hour lows varied little from day to day and averaged 2.5MHz. The daily highs are now around noon, and the lows between 05.00 and 06.00 hours.

And lastly the solar forecast:

This week the active side of the sun should be rotating away. There is a small chance of flare activity in the first half of the week. Solar flux levels are expected to decline to the 80s. The geomagnetic field is expected to be at quiet levels up to the 18th, then the passage of a coronal hole with possible proton enhancement could give storm conditions. Ionospheric MUFs during daylight up to the 18th in the south are expected to reach 30MHz and in the north about 25MHz; then much will depend on the geomagnetic levels. Darkness hour levels are expected to reach about 10MHz. The lower bands are expected to be best for east/west paths.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G 0 Victor Kilo and G 7 Tango Victor series, and Novice calls in the 2 0 Alpha Juliet and 2 1 Delta November series.

--

GB2RS is prepared by the Radio Society of Great Britain
and is broadcast in the 80m, 40m, 6m and 2m bands.

Message-ID: <milewski-1011941236480001@darkstar.uoregon.edu>
Source record: 257043

I had been using a Vibroplex Bug alongside a straight key up until this summer.

Now, in addition to the straight key, I've started using a Jones keyer.

I tried several others before I sprung for the Jones keyer and am glad I did. First of all, the Jones keyer is heavy. I place it in one spot at the operating position AND it STAYS there. The feeling is solid, much more so than any of the other keyers I tried.

As with any keyer, there are a few adjustments that you'll want to make as you use it to more fully customize the unit to your style. For the most part, the Jones keyer is easy to adjust although a bit more cumbersome in this aspect than the Bencher.

However, overall the Jones Keyer is the best keyer I've ever played with.

The FCC can't actually arrest anyone - they don't have that power accorded to sworn peace officers. However, in the event of a "raid" they routinely enlist the services and assistance of the U.S. Marshal's Service who are sworn law enforcement officers and can arrest someone provided there's cause for such arrest.

Richard Alan Burton, ex-WB6JAC and WB6YIO served two prison terms for radio-related offenses. Among other offenses committed by Burton were threatening a Federal officer (in this case the F.C.C. Engineer-in-Charge of the Long Beach CA office Larry Guy). Burton was singled out because he (and several others) were running amok on Southern California VHF repeaters in the late 1970s and early 1980s, incurring the wrath of the Southern California DX Club and other such organizations who had certain contacts in the Reagan White House and wanted them silenced, particularly in the light of the 1984 L.A. Summer Olympic Games.

Well, I failed the tech test the first time, too. I just handed them
another $5 and took it again. :)

I don't think that people post their failures too often since they
can't boast about it (what else is news for? *grin*). I'd just do what
everyone else does and keep on studying until you can get it.

Good luck!

Gee, Cecil, I've heard of the bit bucket, but never the Morse Code pool.
I guess the preferred stroke is the paddle, no?

>73 de KB2PWM

I don't care for the Vibroplex. I want my paddles to have (essentially) zero overtravel. When the contact closes, the paddle stops moving. The Vibroplex seems "mushy" to me.

The Bencher is too hard to adjust. I'm using the Jones Key from Palomar now. Three and a half pounds. Trivial to adjust. Zero overtravel.

I've also used the Kent. It's less expensive and also has a nice feel.

Try before you buy. This is very subjective.

>
>Gary

How much do used, tunable notch filters cost? Where can you get them? Can
you you make them yourself? I operate packet on 145.53, 145.67 and 145.69.
This causes problems when there is heavy activity. Sometims people
cross freq digipeat from 145.69 to users on 145.67 and that causes problems
too. It would be nice if I could put some notch filters on these signals.
Things have been working but they could work better. Any info would
be appreciated. Thanks.

2202. 1750 meters?

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-10 22:23:30 UTC
From: dmunroe@vcd.hp.com
Message-ID: <Cz2ov6.63I@vcd.hp.com>
Source record: 257050

Recently I learned that the FCC allows unlicensed transmissions under 1 watt on 1750 meters. This is 160 - 190 kHz.

Apparently power companies and something called GWEN use this band, but who else? What's the best propagation you could hope for on a longwave band like that at those power levels?

As luck would have it, I remember _CQ_ had an article about 1750 meters some time ago and I passed it by. I believe they even had a transmitter schematic.

I just recently bought a rather simple CW only radio. Didn't want to spend a ton of money to get into the hobby. BUt I soon realized working from afew freinds house I really enjoy it.

So then I did the only thing I knew how to do. BUY SOMETHING THAT WILL LAST YOU THE REST OF YOUR LIFE. I also wanted something very pretty ditting on the desk and I bought the Bencher gold and black Iambic Paddle. I just passed my upgrade a few weeks ago and let me tell you I can key about 25+ wpm on that thing. I can only copy at 5-8 or so! But I have a few freinds that nopw that and are quite tolerant I send to them at 20 like they are accustom to hearing and they send back at a nice rate for myself.

Scott

The Boston ARC maintains 13 ham radio related lists here at Netcom:

barc-list: Information, discussion and anouncements for the Boston Amateur
Radio Club and hams in Eastern Massachusetts.
w1aw-list: ARRL bulletins, news, and information
newsline-list: Redistribution of Amateur Radio Newsline
letter-list: Redistribution of the ARRL Letter
qrp-l: QRP (low power) operation, design, construction
barc-races: RACES in Massachusetts and emergency management
fox-list: Fox hunting and Radio Direction Finding
ky1n-list: VE exams in New England
fieldorg-l: ARRL field organization discussions
ham-tech: Technical discussions and questions about Amateur Radio
arrl-exam-list: Amateur radio license examinations scheduled in the US and
in some foreign areas.
arrl-nediv-list: Bi-monthly bulletins from the ARRL NE Division director
arrl-ve-list: Announcements to VEs and VE teams.

These lists are automatically maintained by Majordomo. To sign up or
inquire about these lists, send mail to listserv@netcom.com with the
following in the body (subject is ignored) of the message. <listname>
is the name of the list to subscribe to.

To subscribe: subscribe <listname>

To unsubscribe: unsubscribe <listname>

For more information about a list: info <listname>

For more information about Majordomo: help

To post (to the two-way lists), send your message to <listname>@netcom.com

Mail should be sent to netcom.com, not world.std.com or think.com, since
those aliases are obsolete.

Please *do not* post subscribe/unsubscribe requests to the list itself.
Please keep your mailing address up to date. If your account is being
changed or shut down, please update majordomo. If your mail bounces for
'no such user' or 'no such machine' or too many of any other bounce (disk
full/can't deliver in 3 hours), you *will* be removed from the lists. Feel
free to resubscribe when the problem is fixed.

These lists are sponsored by N1IST and the Boston Amateur Radio Club.
If you have any questions, I can be reached at n1ist@netcom.com
For more information on the Boston ARC, subscribe to barc-list

SB DX ARL ARLD066
ARLD066 DX news

Thanks to Bob, WB2CJL, Gary, NI6T, Bob, W5KNE, QRZ DX, Chod, VP2ML, The DX Bulletin, Gary, K8BN, Don, WB2DND, Tedd, KB8NW, the Ohio/Penn DX Bulletin, the Yankee Clipper Contest Club PacketCluster network and the Contest Corral column from the pages of QST. Thanks.

SYRIA. A eight member team will activate YK0A November 23 to 30. Omar, YK1AO, arranged issuance of the license and secured an operating site inside a Syrian PTT training facility on the outskirts of Damascus. The primary objective is to make YK available on CW, RTTY and the low bands. Secondary to that is to operate a two or three transmitter Multi/Multi in the CQWW CW Contest. Some SSB and WARC band operating is possible. QSL via W6OAT.

CHAGOS ISLANDS ON 160 METERS. VQ9SS and VQ9QM should soon be active again on this band. VQ9SS plans to be in both the CQWW CW Contest and the ARRL 160 Meter Contest.

TONGA. Paul, KK6H, will sign A35RK from November 24 to sometime early in February. He will operate mostly 160 through 30 meter CW. Plans are to be active in the ARRL 160 Meter contest and CQ World Wide DX CW on 160 meters. QSL via KK6H or the W6 bureau.

UAE. A61AD will be on 160 and 80 meters around 0200z from November 11 to 16. QSL via WB2DND.

ANTARCTICA. Nigel, VP8CMR, has been worked on 14260 kHz after 2230z. Plans are to be active on 17 meters from 1500 to 1900z. He will be at the base until February 1995. QSL to Nigel, Halley Base, BAS, Via Port Stanley, Falkland Islands.

TAIWAN. Tom, WB4IUX, has permission to sign BV/WB4IUX. He should be on the air in late November or early December, with plans to

operate 80 and 40 meter CW almost exclusively. He may get on 20 meter SSB to spread the word that he is up and running, and to provide his operating schedule.

ZAMBIA. Ely, IN3VZE, will be active as 9J2CE until November 20. Listen for his SSB on 20 and 40 meters. QSL via IN3VZE.

MARIANA ISLANDS. A group will sign KH0AM during the CQ WW CW Contest. Some activity will take place before the contest on the WARC bands and some RTTY. QSL via JE1CKA, Tack Kumagai, PO Box 22, Mitaka, Tokyo 181, Japan.

JAMAICA. Walter DJ6QT is now signing DJ6QT/6Y5 until December 1. Look for his print in the WAE RTTY contest using the call 6Y5X. QSL via his home call.

CARIBBEAN DXPEDITION. Dieter, DL3KDV, will be active from J6, J8 and J7 starting sometime this month. Listen for him in the CQWW CW contest. Dieter prefers QSL cards via the bureau.

VIRGIN ISLANDS. Listen for N9RJ/KP2, operated by N9RJ, N9KZJ, WB9CEP and W2CGI, from November 12 to 20. Plans are to be on 80, 40, 20, 17, 15, 10 and 6 meters. QSL via WB9CEP.

MARTINIQUE. F6AOI, F6BFH and F9IE will be on all bands with CW and SSB from November 11 to 27. They will sign FM/ their home calls.

ARUBA. Jeff, KR0Y, will sign P40F from Aruba November 21 to 29 including an effort in the CQWW CW Contest.

GIBRALTER. Dave, N7RK, will be active from ZB2 November 10 through 15 as N7RK/ZB2. He will be on 80, 40 and 20 meters, but may try 160 meters. QSL via CBA.

GAMBIA. C56/G0MRF is not listed in 1994 Callbook. Direct QSLing is via G8PDW, or bureau cards may go addressed to G0MRF.

THIS WEEKEND ON THE RADIO. Information on the European DX Contest, RTTY, appears on page 126 in July QST. Please note that W/VE stations are no longer required to send their state/province as part of the exchange.

OK/OM DX Contest, sponsored by the Czech Radio Club, runs from 1200z November 12 to 1200z November 13. Exchange signal report and serial number. OK/OL/OM stations will exchange a 3 letter district code. For details check page 126 in October QST.

The 1994 Japan International DX Phone Contest, sponsored by Five-Nine Magazine, is from 2300z November 11 to 2300z November 13. Exchange signal report and serial number starting with 001. Japanese stations will exchange signal report and two digit prefecture number.

Hello folks.

I am interested in putting together a special event station. I need to know if there are any rules regarding this. Do I need to get approval? OR can I just inform folks about it, set up the radios, and start my pileups?

I plan on making a cert. and qsl card for the event. Working 3 bands phone and cw for atleast 24 hours. Any thoughts please respond!

| voltage between a hot leg and ground 115/120 vac and the voltage
| between each hot leg 230/240 vac?

No - it's 240v from "hot" (we call it "active") to "neutral", which
in turn is grounded elsewhere. Unless you are referring to our
3-phase system, in which case it's 415v 'tween phases, and 240v
from each phase to neutral (whence comes the 240v single phase).

: year old?

It's definitely easier when you're young. Learning Morse is in some ways like learning a new language, and in some ways like learning to play a musical instrument (sense of rhythm). Both of those are easier for young people to learn.

You can still do it when you're older -- it just takes longer. And the adults do have an advantage over the kids in the written test, so I guess it all balances out...

I believe Australia is like Europe in that the 240V is not balanced
with respect to ground. i.e. one wire is 240VAC and the other
wire is 0 V.

The most current orbital elements from the NORAD two-line element sets are carried on the Celestial BBS, *(205) 409-9280*, and are updated daily (when possible). Documentation and tracking software are also available on this system. As a service to the satellite user community, the most current elements for the current shuttle mission are provided below. The Celestial BBS may be accessed 24 hours/day at 300, 1200, 2400, 4800, or 9600 bps using 8 data bits, 1 stop bit, no parity.

Element sets (also updated daily), shuttle elements, and some documentation and software are also available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

Mike:
Even a low power local channel AM station will blanket all receivers
nearby. This can be proven by driving by a station while tuned to
another. As you enter the "near field" of the transmitter, all you will
get is the nearby transmitter, even if your radio is not tuned to that
station.

Since the station will be transmitting with 50,000 watts, your problem
will be much more severe. If the proposed new location permits the
tower(s) to be located at some distance from roads and residences, the
severity of the problem will be reduced, but in many cases never
eliminated completely. FM stations of the low power variety (10 watts)
have been known to interact with other stations in town and blanket TV
receivers. Because of the frequency assignments, this problem will not
happen with the AM station, but equally annoying problems are likely to
occur.

If this AM station will have a directional pattern, problems may be
severe along the direction of the major lobes, but nonexistant in the
nulls.

To make your best case, try to locate a currently practicing RF
engineer, or the station engineer from a competing radio station to

explain things to you.

Bob Garland
former broadcast chief engineer and builder of the offending FM
mentioned above (and then there were the people without TV sets who were
getting interference on their TV's ...)

>It's absurd to even ask for a submerged reef to have "country" status!

Don't be too annoyed at the DXCC; our own FCC does some unusual
prefix assigning: Midway Island, KH4, belongs to the State of
Hawaii, KH6; so why should it receive a different prefix?

Note that Kingman Reef only has a tiny bit of dry sand
exposed above the higher high tide mark, yet has its own
prefix: KH5K.

Not related to this: The State of Hawaii is discussing with
the feds the possibility of annexing both Johnston Island,
KH3, and Palmyra Atoll, KH5, so as to extend our fishing and
undersea mining limits.

Actually the tests are HELD at Md Radio Center in Laurel on the third Saturday of each month, but given by the Laurel Amateur Radio Club (which, incidentally, is one of those groups which does not charge for the exams). MRC cannot give exams, being a dealer, but they checked with the FCC to make sure it was legal for a VEC to do it in their store. (And if you go, be prepared for a good wait--usually pretty crowded!)

I know a lot of people who have not passed the No code tech on the first try. Remember, it's a combination of the Novice and Technician theory exams. If you pass only the Novice theory exam, you still get a csce for it, then all you have to do is pass your technician written (the second half of the no code ticket) Even then, I've known folks who have failed both at the same time. Just don't give up. If you can't pass both on the same try, just study the Novice theory. Pass it, get your csce, then study the Tech question pool (if you have a good no code tech book, it should seperate the novice pool from the tech pool).

Hi Folks!

I am looking for a HAM with a HF to locate a sailboat in the carribean,
probably just north of Columbia. The boat is the "Carina" (ka-ree-na)
out of Portland, Oregon and the skipper is Greg Miller.

I know he was checking in daily with the "manana net" in Mexico, but
I do not know which net he would use off Columbia.

The message is very simple: "Call one of your brothers ASAP"

If this is not the proper place to post this sort of thing then please
point me in the proper direction!

If the pro-code folks posted the number of hostile anti-code articles
you do this would no longer be the most read rec.radio.amateur newsgroup.
Why don't you give it a rest, Gary, or at least take this over to
.policy?

There is now a license available for those not wishing to learn the code;
but as we've read on here no one need be without HF access, for 5wpm
can be attained in as little as 5 days (admittedly a lower bound).

Why don't you put your energy towards something more worthwhile, such
as helping to prevent the death of the more than 1000 babies per hour
worldwide from disease and malnutrition? [Oops! Sorry to inject a
bit of humanity into Usenet.]

I think that code should remain a part of the hobby at some level. Granted, I think 20 wpm might be a little much to test on, but there should be some knowledge of code on entry-level tests. I've found out through experience that it does get through where voice is not understandable. As far as emergency communications goes, I feel that this point is essential. Of course, I'd never throw away my microphone and put my CW keyer in its place, but I also wouldn't throw away my CW keyer.

I would be in favor of reducing some of the code requirements, but it should not be totally eliminated.

By this time they are probably extremely scarce. You'll be lucky if your local store can find one in good working order through a regional search, which usually covers several states. Haven't checked to price lately, but they are probably still at the $20.00 mark. Here in the Richmond area, they are gone completely, without a trace of ever existing.

Good luck finding one (and if you find two, let me know!)

Do you know if they have gotten their new system up and running? From what I've heard, they should soon be getting licenses processed in under 4 weeks once the new system is online. Any truth to this? They were taking as long as four months for a while.

Radio Shack had a VHF/UHF SWR meter in their 1994 catalog. I no longer see it in their new 1995 catalog, and I assume they have dropped it from their line.

I would suggest you look at a Pro AM meter. It looks very much like the Radio Shack meter (probably Pro Am built them for R/S), and they are about the same price.

Good Luck

Rick, WB7UGZ

> I noticed today that the local Radio Shack now has the new 2 meter
> amplifier in stock. I bought one but have yet to hook it up.

I played around with one in the store over the weekend and tested it out into some area repeaters. It seems to work very well, and sometimes means the difference between not getting into the repeater and having an understandable signal. Not a bad piece of equipment. But with all of the interest we've had in it, at least in this area, I don't think they're going to be on the shelves for too long. If you're interested in it, you will probably want to get and get it now. The warehouse tends to run out of the most popular items very quickly. One store I work at had 4 in stock, my assigned store was sent none, and I'm sure that's going to be the case around the country...if your closest store doesn't have any available, check elsewhere.

It does not seem to draw much power, wither. I hooked the amplifier up to a 2.5 amp power supply, and the supply showed no signs of strain to put a full 30 watts out of the amplifier. There might even be enough current left to run an HT off the same supply at 3 watts or so.

: any examinees who could suggest anything for us. Please send your
: e-mail directly to me. Thanks.

Hi Yuzuru,

This isn't the ultimate cure-all or anything like that but what I used to to when I ran the VE team out of Alamogordo, NM was to take the exams on a first come - first served basis. I would attach a numbered label (paper clipped) to the exam. They would be graded in the order received.

The VEs would have numbers also. 1, 2, 3. No. 1 would get the exam first and it would go down the line--none of this helter-skelter grade em as they come up. As number 4 was finished the first VE would pass the exam to the second VE and take exam No. 5 and grade it.

Might not be the best way but for two years it worked great for me and the team. I'd be interested in other's methods...although I am no longer a VE. I'd love to be one but I like selling ham radio equipment now....and it pays more. <GRIN>

2235. Ham Radio & More

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-11 09:10:32 UTC
From: jwood@iglou.iglou.com
Message-ID: <1994Nov11.091032.1114@iglou.com>
Source record: 256930
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

I have been asked by e-mail by many for this list. The list can change at any time. Ham Radio & More is a national listener call-in show, hosted by Len Winkler, KB7LPW. It has aired on the originating station, KFNN, 1510AM, in Phoenix, Az. since 4/21/91. The show has been on the Talk America Network since 11/28/93. The show is on every Sunday at 6:00pm EST. There are guests each week, prize give-a-ways, listener calls, trivia, and more. It's mostly non-heavily technical, and more about the aspects involved in amateur radio, and who is doing what.
In addition to the following stations, the show can be heard via satellite on Spacenet 3, Transponder 9, 6.8 audio.

Hartselle, Al. WHRT, 860am
Decateur, Al. WAJF, 1490am
Phoenix, Az. KFNN, 1510am
Big Bear, Ca. KTOT, 101.7fm
Denver/Boulder, Co. KBCO, 1190am
Hartford/Newington, Ct. WATR, 1320am
Chicago, Il. WKTA, 1330am
Alton, Il. WBGZ, 1570am
South Bend, In. WIWO, 1580am (tape delay)
Huntington, In. WPDJ, 1300am
Orleans, Ma. WKPE, 1170am
St. Louis, Mo. WBGZ, 1570am
Biloxi, Ms. WVMI, 570am
Fayetteville, Nc. WEEB, 990am
Raleigh, Nc. WCRY, 1460am
Lincoln/Hasting, Ne. KICS, 1550am
Philadelphia, Pa. WIFI, 1460am
Oklahoma City, Ok. WKY, 930am
McAlester, Ok. KTMC, 1400am
Central City, Ky, WMTA, 1380am
Portland, Or, KBNP, 1410am
Castledale, Utah, Channel 26, TV

Any radio station can air the show at absolutely no charge, no contract. Call KFNN, 1510am, for clock information and other details at 602-241-1510.

To get the show aired in your city, have your fellow hams call a local small talk station and tell the program director to air the show.

Sending a few FAX's helps, too.

Thanks again & 73,

Jeff, N8PPB

Hi Fuat,

I am very interested in each Callsign, QSL-Manager, etc. data base. So I have tried the qrz server with my callsign (DK3VN). The server says, it needs a callsign. What??? I have my callsign about 25 years and it is not a callsign? Oh my dear I am a pirate for 25 years ... and I don't know it. ?:-|

Hmm... hmmm..., I got it: may be only US callsigns are real callsigns! :)

So I have tried yours (N2YGN) and please see what I got:

"Search Failed: You must supply a callsign to search for in the text box.

Back to the QRZ Callsign Database"

Sorry, I don't. I switched to an other one ... :-)))

A nice weekend and have fun ..

Regards
Waldemar, DK3VN

OM -

I think the article you want is "2M RX from Radio Shack Weather RX",
in QST Mar 83, p. 46. Also check QST Jun 83 for Feedback.

Similar articles also ran in HAM RADIO Jan 75, p. 56: "Retune WX RCVR
to 2M FM"; see Feedback in HAM RADIO Feb 76, p. 72. Also in HAM RADIO
Apr 89, p. 28.

Another similar one is in 73 Magazine Mar 76, p. 128: "Realistic WX
Radio Converted to 2M".

The above info is from the FBTO Index from Doodah Publishing, PO Box
7368, Nashua, NH 03060. I have not read the articles, themselves.

I agree absolutely that it is hazing and a filter to discourage licensing
of the kind of people that inhabit the CB bands and Internet newsgroups.

I'm not sure, however, that this is anything less than EXCELLENT.

Perhaps as an alternative, for those with material physical problems,
a written paper on number theory or even on cuniform literature could
be offered. Just make sure that those who want to get the ticket prove
that they REALLY want it and are willing to work for it!

>The only reason for a government test is to use it as a forced recruiting
>tool for Morse operators. If the mode needs government force in order to
>remain viable, then perhaps it *is* time to retire it. But if you believe

I'd like to see a post by someone from the ARRL on this. I *believe*
that the international agreement on allowing amateur radio operation and
designating specific frequency bands for amateur operation has a provision
that applicants for amateur privileges in the frequency bands below 30 MHz
must have a "demonstrated ability" to send and receive by ear in the
International Morse Code. I'm not at all sure if there is a speed
requirement levied, and if so it probably is 10 WPM or less since many
countries use 10 WPM as the requirement, while the U.S. has used 13 WPM
since 1936 (by ARRL request to the FCC at that time; it was 10 WPM
prior to that).

If, in fact, the code speed requirement is by international
agreement, then the FCC *cannot* just "drop it." To do so would
violate an agreement to which the U.S. is a signatory.

Can someone knowledgeable on the *current* international agreements
please elaborate on this issue? It might shed some light on this
debate.

>to make something.

It's true we don't have to chip our own galena or wind our own spark coils anymore, and good riddance I say, but today's surplus, and new, gear is much better, and much more available than what we had in the past. Most kids are already digit heads, and the rest of us are learning, because doing things digitally just works so much better. Building is better than ever because of the marvelous digital and analog chips available to us today. We can assemble stations that would make our fathers or grandfathers green with envy. And we can do it for lots less money.

>I think we need to raise the entry level skills and really TEST for
>evidence of these skills. I am really saddened by much of what I read in
>the 'mags', here on the I.N., and what I hear on the air these days.

I don't think entry level knowledge is really any lower today than in the past. Amateur radio is a learning by doing endeavor. All of us started knowing a lot less than we do today, at least I hope that's true, otherwise we're falling down on our obligations to keep up with the state of the art. The purpose of testing should be to assure the government, as much as is possible with a test, that we know the rules of the road, that we know how to practice radio safely, and do so without causing interference to other services. I think the tests are a little lax in these areas, but we don't want to make them so stiff that you have to be a graduate engineer to pass. The purpose of amateur radio is to be a lifelong learning process. If we make the entrance exam too tough, we won't get the students into the school of amateur radio that we need to keep it a viable institution.

>So, why don't other contests use a more interesting exchange?

Rich, it may have something to do with being able to compare scores from year to year that the contests tend to keep the same exchange. The North American QSO party uses name and qth; Sprint uses serial #, name and qth. There is a rtty and JA contest that uses age and qth (yl's can use either 0 or 99, cannot remember which). I like the serial #, name and qth format as it kind of personalizes the qso and gives u an idea of how the other stations are doing.

Sri I missed u in the test but cu in the phone portion.

>Things have been working but they could work better. Any info would
>be appreciated. Thanks.

Asking how much used cavity filters cost is sort of like asking how
high is the sky, there are a wide variety of answers, all correct
in one way or another. Most filters you'll see at hamfests will go
for between $15 and $75 each, but some will go for much more. It
depends on the band, Q, and power handling ability of the cavity,
as well as on the design. There are dozens of different possible
designs for notch cavities. Some are better than others, some are
more complex than others, some are more expensive to make than others.
It really depends on what you need as to what the right filter will cost,
and it depends on what's available. The law of supply and demand comes
into play.

Notch filters are narrow, but notching a FM signal only 20 kHz away at
2 meters is a tough chore. The skirts of the filters would overlap,
so insertion loss would be fairly high, and ultimate rejection not
so good. Also, since the skirts would overlap, some of the modulation
of the desired channel would be cut. This introduced asymmetry would
distort the demodulated FM waveforms. Using notches for the 53 and
69 combination would be feasible, but I doubt you'd be able to use
them for the 67-69 pair. That's simply too close; so close the modulation
sidebands overlap. Whoever coordinated that in the same area should be fired.

>Recently I learned that the FCC allows unlicensed transmissions under 1 watt
>on 1750 meters. This is 160 - 190 kHz.

Yes, there's also a 50 foot limit on the antenna *and* feedline. Most
Lowfers put the transmitter at the antenna base for this reason.

>Apparently power companies and something called GWEN use this band, but who
>else? What's the best propagation you could hope for on a longwave band like
>that at those power levels?

The Lowfers have achieved 1,000+ mile range using long term correlators
on slow synchronous digital signals. Hand sent Morse signals are also
used, but at much shorter range. Harmonics of the power frequency are
a nuisance here, as well as heavy atmospheric noise.

There is no skywave such as we are familiar with at MF and HF. The
signals are all surface wave, following the contours of the Earth.
Signal strength drops rapidly with distance due to the losses in
the Earth/Air interface. High power stations can achieve global
coverage at VLF, but 1 watt stations with short antennas can't
match that.

The first issue of Communications Quarterly had a construction article
for a correlator with a 10 second or 100 second bit time. That is
equivalent to a fractional Hertz bandwidth of 0.1 or 0.01 Hz. It easily
gives error free copy on digital signals totally undetectable by ear.
This same technology could be applied at MF, HF, and even VHF/UHF, but
it's usually not necessary because signals are much stronger in those
ranges, and noise levels are much lower.

In general, I'd expect the 60-year-old to take longer. But he or she ought to have no more difficulty learning. What's more, there's so much difference in learning speed from person to person that many 60-year-olds will be faster learners than many 18-year-olds.

>an HT off the same supply at 3 watts or so.

Ah, lets think about this for a moment. 13.8 volts times 2.5 amps is
34.5 watts. If the amplifier is putting out 30 watts with only 34.5
watts DC input power, its efficiency is 100*30/34.5=87%. That's nothing
short of amazing. Even if we assume the 2 watts drive is passed through
to the output, the amp is still 83% efficient. Unless it's running Class D
switchmode, I'm dubious. I suspect the supply is putting out more on the
order of 3 amps. That'd give an efficiency, assuming pass through of
driver power, of 69%. That's more believable, but still almost too good
for a common base transistor Class C amplifier.

The answer you seek is in Article 32 of the international regulations.
It's printed as an appendix in the ARRL's FCC Rulebook. It does indeed
say that applicants must be tested on their ability to send by hand and
receive by ear texts in the International Code. There is *no* speed
requirement, and there is a method, used by the Japanese, of taking an
exception footnote to the regulation. That means any national administration
is free to take exception to the Code test requirement simply by filing
a footnote with the ITU. The US is already in technical violation of
Article 32 because a sending test is no longer required, and because
alternatives to receiving by ear are allowed as accomodations to the
deaf. Making it offical by filing a footnote is just paperwork.

2252. What wattage soldering iron best for soldering PL259 connectors?

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-11 15:31:14 UTC
From: wstrahl@nwscb.nw.att.com
Message-ID: <Cz40G2.AEs@nntpa.cb.att.com>
Source record: 256994

I am seeking net-wisdom re: best size soldering iron for installing PL259 connectors on RG8-type coax. I had been using a 100W soldering gun but that seems to take too long to heat the connector enough and the tip life is shortened from the 'excessive' ON time. Something with greater mass (a soldering IRON) would probably do a better job.

The ALLIED and NEWARK catalogs show soldering irons in 100, 150, 200, and 300 watt sizes. What has been your experience soldering the connectors with an iron? What do you feel the best wattage-size is? I was thinking about getting the 150 watt model but thought I'd seek expert opinions first! Yes, I know commercial grade crimp connectors are good, but I think soldered PL259's will continue to be good enough for me.

>Well, I failed the tech test the first time, too. I just handed them
>another $5 and took it again. :)

I thought the $5 fee was good for the entire session - i.e., if you
failed and the VE lets you test again, you needn't pay the fee again. I
could be misreading this - perhaps you came back at a later date and
retook the test!?

My wife attempted the no code tech exams, passed the novice portion but
failed the tech portion (she didn't study but was told to give it a shot
anyway). She just retook it a month later after studying and passed.

BTW, she tried books but did not really have the time to devote (we have
a 7 month old daughter now - we have time for little). Her commute to
work DID provide time and she listened to the W5YI/Gordon West tapes to
and from work and picked up enough to attempt the exams. After a couple
of computer exams at home, she was ready.

How often, in Australia, do you hear of folks being electrocuted in
their homes? In the USA (110v for most household stuff) it rarely
occurs, you have to do something really stupid like knock a radio into
the bathtub while you're in it, to end up dead. You may get "bit" now
and then, but it's not generally fatal. I sure as hell wouldn't want
240v on my hair dryer, toaster, small power tools, etc.

BARTG * GB2ATG * NEWS * BARTG * NEWS * GB2ATG * BARTG
This is the - British Amateur Radio Teledata Group - News Broadcast
Service for all Amateurs and Short Wave Listeners interested in RTTY
Amtor, Pactor and Packet Radio.

This news is broadcast during the first full week commencing Monday
each month, to the following schedule..

Evening transmissions at 20:00 U.K. local time on 3.584 MHz. Mark.
RTTY on Monday-AFSK, Wednesday-AFSK and Friday-FSK.
Pactor-FEC on Tuesday.
Amtor-FEC on Thursday and Saturday.

Morning transmission at 10:00 U.K. local time on 7.041 MHz. Mark.
RTTY on Sunday-FSK.

Both frequencies could be +/- for QRM.

An edited version of this bulletin is available on the Packet
network as a BARTG at GBR. file thanks to:
Andy (G3ZYP) BARTG Publicity Officer at GB7MXM.#36.GBR.EU.

It is also posted on the "INTERNET" system via the INFO-HAMS list
on UCSD.EDU. thanks to Iain (G6ARO) who is available on the
"JANET" network as Iain@HUMBER.AC.UK

News for November 1994. Bulletin No. 023.

Contests.
The Troy Amateur Radio Association (TARA) run their annual RTTY Sprint from 2100 UTC. December 10 until 0100 UTC. December 11. Work stations once per band. One point per QSO. States and DXCC countries are multipliers. All 5 HF bands 10 - 15 - 20 - 40 - 80. Logs must be submitted by January 17 to:
Bill Eddy, NY2U, C/O TARA, 2204 2nd Street, Troy, New York 12180.

Notes of interest.
Ghana 9G. A second group of central Arizona DX Association members

and friends from the UK will be in Ghana from November 20-30. They plan to operate a multi-multi effort in the CQ-WW CW contest. Outside the contest they will be active all bands with CW and some RTTY. QSL their home calls.

Indian Ocean. 5 Operators from Japan will be visiting several rare locations between October 23 and November 20. They hope to be QRV from 3B6, D68, FR, FH and 5R8. with SSB, CW and RTTY.

Thailand HS. Reiner DL2VK will be in Thailand for approximately 6 months signing HS0/DL2VK. He operates mostly CW but plans to use some Packet, Amtor and Pactor.

VE8RCS is the call sign of the station at Alert, Ellesmere Island, located 450 miles from the North Pole in CQ zone 2.
Victor Echo Eight Very Cold Spot, top of the world.

IA5/IK0SXU was on Monte Cristo Isl. IOTA EU-028.

V47WK was on IOTA NA-110.

U.A.E. A6. Don, WB2DND will be in Dubai from November 11-16. Look for him using RTTY on 14090 at 1300z.

South Shetland Isl. VP8. The International RTTY DX Association (IRDXA) has donated a Hal RTTY Terminal for the use of HF0POL, the Polish Antarctic expedition base on King George Island in the South Shetland group. The new HF0POL operator is Andy Grotha, SP2GOW who has been schooled for RTTY by Wald, SP4KM. It may be several months before Andy gets to the base and appears on the keys. KYFC.

Uganda 5X. Paul, WF5T will be in Uganda during the month of November. He will sign 5X1XT and uses both CW and RTTY. QSL to WF5T

Thanks this month to..
G3ZYP, GU0SUP, VK3EBP, DXNS, ARRL/ARLD, KB8NW/OPDX/BARF80.

BARTG caters for all DATA interests with information-components-kits -ready built units and software from experts. Members receive a 120 page quarterly journal devoted to data modes. Beginners guides for most data modes are available. The group sponsors HF and VHF RTTY contests, administers its own DX and members award scheme and runs an annual rally.

This copy of BARTG News is posted by Iain Kendall (G6ARO) who can be contacted via Internet e-mail at.. iain@humber.ac.uk Items for inclusion in the broadcast may also be mailed to this address, as well as any queries regarding membership or services offered by BARTG.

2257. Re: TA-33Jr power?

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-11 16:31:02 UTC
From: bill@a3177092.ssr.hp.com
Message-ID: <3a0686$3oj@c3177208.ssr.hp.com>
Source record: 256942

In article <39e08o$5ge@maggie.austin.wireline.slb.com> Wayne Wright <w5xd@slb.com> writes:

>Has anyone ever destroyed a Mosley TA-33Jr by running more than the
>rated 300W to it? How much power and what mode? I have one I keep

When I got my TA33jr (used, 30 years ago) it had one of the driven
traps fried from an HT-41 (900W out) being used on 15M.

The power limit of the TA33jr depends primarily on one thing: Spiders.
The main reason the traps fail is because the little buggers put webs
across the coils that pick up pollen and other carbon based conductors
that allow the turns to become RF shorts. The high current induced in
the shorted turns melts the coil form, distorts the coil and either
detunes the trap (bad) or finally results in a "dead shorted turn" (real
bad).

Two things to do: Clean the traps and seal the elements. Make very
sure that the end caps are in place on the driven element and that the
trap caps are in good shape and well sealed. There are drain holes on
the traps -- be sure these are pointed DOWN! Critters can migrate from
either end of the element: Do not expect to be able to push extra watts
into the thing unless you have disassembled the driven element traps,
cleaned them and re-sealed them. Don't run more than 400W of AM (if
you're one of those Old Farts so inclined). I run an SB-220 at about
1500W PEP out, and have for several years, but I don't tune it over about
700W into the antenna, and then limit myself to <5 seconds of carrier.
I also keep a set of spare traps...

If you have bad plastic nipples (and who doesn't?) all the bits and
pieces are still available from Mosley. Call them and have them send
you a parts list, get all the end pieces and trap caps, some of the
element lube (conducting lubricant) and sealant. Mosley can be found
at:

Mosley Electronics, Inc.
1344 Baur Blvd.
St. Louis, MO 63132
Technical: (314) 994-7872
Orders: (800) 325-4016

I have had nothing but first class service from Mosley over the years
and will be upgrading to a TA-53M when I change QTHs. It's nice to deal
with a company that understands what "Customer Satisfaction" is worth.

[chopped - bdt]
>I'm looking for a way to generate high quality Morse audio for
>code practice

> I've tried a couple of computer programs playing through both the computer speaker and a
>Soundblaster, but neither method is of acceptable quality when recorded on tape.

>
>I'd like sine wave output with a smooth keying envelope.

Bear in mind that the bulk of cassette tape recorders do not have
record level controls. A circuit in the tape deck determines what
the 'correct' level should be. This doesn't work well for material
that has periods of loud sound and periods of quiet. (Morse code
comes to mind) It will bring up the level, and hence the background
noise between characters and round off the trailing edges of the
tones.

If you're not already doing it, use a tape recorder that allows you to
set the recording level and experiment with various levels.

Another problem, particularly at higher speeds, is called 'key click'.
It is the sound caused by a too-fast attack and decay of the sound. The
steep leading and trailing edges create a clicking sound that is quite
distracting. I cannot suggest a fix for that one short of creating
your own sound source with a more gentle attack and decay.

Good luck with the code. It's not easy. It may not be all that useful,
but the sense of accomplishment is great. Besides... unless and until
the laws change, it's required for advancement.

(This extra thinks that the high speed Morse code requirement should be
replaced with different, suitably difficult challenge of the candidates
choice.)

Could anyone tell me which of the latest
dual band Yaesu mobiles that will open
up on the transmit side and cover the band
of frequencies from 450-470 Mhz? I am curious
because I would like to be able to access
Class D CB/ business band repeaters, with
phone patch and be able to access ham repeaters
without having to have two radios occupying
limited under-dash space. Any info would be much
appreciated.................

I bought the HR-2600 new right after they came out with the product and have never regretted it. Used it mobil until the band closed and contemplated the Chipswitch until I heard it didn't meet advertised promises. But that was 2 years ago. Now, I too am considering using it as a 6 meter driver but haven't made the step yet. Its on the closet shelf waiting for the sun spot cycle to start over again.

>

Hi all,

I just passed the tech+ tests a couple weeks ago at age 32...I learned the code when I was probably 12 but never took the tests...Hadn't heard a dot or dash in 20 years...Spent 3-4 days (about an hour in the morning and an hour in the afternoon) with Supermorse and passed the code test...My dad learned the code at age 65 in 2-3 weeks and passed 5 wpm on the first try...I think he learned the code faster at 65 than I did at 12...All I had to learn the code was a buzzer...I didn't even have anyone to send to me...Just sent to myself...My dad used cassette tapes...

>of ham radio can last now that the skills and knowledge that use to be
>required to obtain a license have been reduced to that required to
>"operate" a door-bell.

here we go again....

when did you think this happened? 1990's? 1980's? 1970's? 1960's? 1940's?

one division of the company i work for made a fair amount of money on amateur equipment from the 30's into the 70's. but i forget, you aren't an appliance operator if your equipment says "Collins" or "Johnson" or "Drake" even tho the most technical bit of work is assembling patch cables and integrating the station (work made obsolete by progress in electronics technology).

BTW, everything new here is surface mount and uses lots of custom logic to reduce parts count. the crazy part is the makers of this stuff have tried to interest the "common ham" in some this technology only to be told that "real radios glow in the dark". or that "you can't understand this solid=state stuff".

>I worked hard to enter ham radio and flunked my first novice code test.

you worked hard to pass a test. someone else found it easy but maybe has a problem dealing with the social aspects of a person-to-person radio service.

>I passed all of the code tests thru 20wpm the hard way by showing true
>proficiency (sp) by copying and sending 1 minute w/o errors and really
>studied to learn the theory necessary to earn an extra class rating.

1 minute, one time, is a demonstration of truly acquiring a skill?
That'd be like saying if your first ball in the game is a strike, you can just write down "300" for the total score for all three games since you've demonstrated you can roll a strike one time.

those that are truly proficient seem to not be hung up over code tests...and would volunteer that maybe it should be 5 minutes of 10 error free...1 of 5 means you could have 80% wrong or not have enough to even begin to have been considered to have "copied" the message. if you REALLY want to have a morse test...that is.

and all of that is nothing compared to the work required in getting a BSEE. maybe we should waive writtens for those holding a BS in a technical subject.

how come all the OM's virtually let the service die in the 70s? no operators means no service as well.

>Every baby learns to walk by trial and error and most of us walk today!
>Lets start expecting more instead of less knowledge of those who would
>join this wonderful hobby.

let's start seeing some serious leadership from those who claim age alone is equal to experience and knowledge instead of pointless arrogant bashing by those who think time in grade alone is enough. or that mere achievement of a piece of wallpaper alone is enough.

73 or something...

On rec.boats, there is a continuing thread of two people who sailed from Northern California to Mexico, and then out into the SO. Pacific to the Marquesas Islands, and beyond. They report in daily via the Internet, using Amateur Radio. There is also another sailor who uses Ham radio to access the Internet from his boat directly. I am a newbie to Hamdom, and in fact, am not too familiar with the various digital modes available, so the best solution is to tune rec.boats, and put out a message there. Someone will be glad to help out!

Source record: 256948

-Strahl,W.A. (wstrahl@nwscb.nw.att.com) wrote:
8{P I am seeking net-wisdom re: best size soldering iron for installing PL259
8{P connectors on RG8-type coax. I had been using a 100W soldering gun but
8{P that seems to take too long to heat the connector enough and the tip life
8{P is shortened from the 'excessive' ON time. Something with greater mass
8{P (a soldering IRON) would probably do a better job.

8{P The ALLIED and NEWARK catalogs show soldering irons in 100, 150, 200, and
8{P 300 watt sizes. What has been your experience soldering the connectors
8{P with an iron? What do you feel the best wattage-size is? I was thinking
8{P about getting the 150 watt model but thought I'd seek expert opinions
8{P first! Yes, I know commercial grade crimp connectors are good, but I
8{P think soldered PL259's will continue to be good enough for me.

8{P Wayne Strahl - W9II wstrahl@cbnewsa.att.com

Wayne, you are right! The best heat range to use is in the 150W to 200W
guns. I, myself, use one of either 2 mini-torches to put on connectors.
I hv a CUB and a Micro-Flame from Shack that I use. These make short
work of installing PL259's! I use the micro-flame more frequently
because of the concentrated heat source. You do hv to be careful though
so you do not burn the coax. After a few installs you can and will get the
hang of putting them on w/o burning all up! The guns work almost as well
in my book. It just takes just a bit longer to heat and make solder flow.

Hope this helps! 73 de Frank - KA3UWW

The weather is cooperating for the SSOK balloon launch on Saturday, Nov 12.
The launch from Central Kansas should go off at 9AM (1500Z).
this will be a slow rising balloon with a GPS receiver sending packet data
on its location and altitude on 144.340 mhz.
The idea is to get to 125-thousand feet, verified by the GPS.
I will run the HF net on 7.155 mhz starting well before the launch.
WB0DRL, whose package and balloon this is, will chase the balloon in an
airplane.
Others will chase on the ground.

jaevans@clark.net (John A. Evans) reports:

>.....failed the tech portion (she didn't study but was told to give
> it a shot

I've seen a number of statements like this, and someone who replied by e-mail to my original post said that in the VE group of which he is a member, they encourage people to take written tests beyond the ones they studied for, so as to keep a certain failure rate, the idea being that if you report a 100% success rate, this might sound rather suspicious. This messes up any attempt to do statistics except for the very first written test, if this is a widespread practise.

> split the circuit into two 115/120 vac circuits? ie. is the
> voltage between a hot leg and ground 115/120 vac and the voltage
> between each hot leg 230/240 vac?

For exactly the same reason that you can't get 2 lots of 115 V AC in Europe. Household mains is derived from a Star-Connected 3 phase system whereby the 'cold' or neutral wire is connected to the ground at the substation. In other words the 'phase' or live wire is at the full mains voltage with respect to Earth.

Ah .... this is true grasshopper (ref - the old Kung Fu TV series) ...
however do you know on what basis the Japanese took an exception
to the regulation??

My understanding is that "technically" the 92% of the the 1 million
operator license holders (there's only 500,000 station licenses)
are limited to 10 watts output on the HF bands. This was explained
to me (during my 10 years in Japan) that these license holders are
NOT supposed to be able to have international communications ... in
other words, it is only for "domestic" communications.

If that is indeed the case, perhaps the FCC could implement a similar
strategy .... low power, domestic communications only, no code ......
hey ... that sounds like CB to me. hmmmmmmm

2274. New ARRL InfoServer files

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-11 21:01:36 UTC
From: mtracy@arrl.org
Message-ID: <1994Nov11.210136.13809@arrl.org>
Source record: 256955

Greetings all,
I have just completed a major update of the ARRL Email Information Server (info@arrl.org). I have added nearly 100 new files and updated a number of others. In addition, the processing software has been changed (courtesy of Jon Bloom, KE3Z) to automatically split large files when they are mailed. Because of this, many files that were previously available in parts should now be requested as a single file (as an example, part97.txt replaces part97.pt1, part97.pt2, part97.pt3 and part97.pt4).

If you have been a long time user of this service, please retrieve a new index listing for a list of what is availble now (or just grab the new.txt file to see what has been updated).

For those that are not familiar with this service, send an email to info@arrl.org with any subject (it is ignored) and the following text in the body of your message:

help
index
quit

If you have any questions about this service or any of the information on the Info-Server, please direct them to me at mtracy@arrl.org.

Best Regards, Michael Tracy, KC1SX, ARRL Technical Information Services

2278. Re: I just failed the Tech test!!

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-11 21:34:34 UTC
From: phb@syseng1.melpar.esys.com
Message-ID: <phb.784589674@melpar>
Source record: 256960

Just as a personal opinion, no one should feel badly about failing the test (code *or* written). Back in '57, I went to the FCC office to try and upgrade from Novice to General and failed the code. Since my rural home was beyond the distance limit, my next try was for a Conditional, proctored by W4FJ. I passed the code OK, but got word back after a couple of weeks that I'd failed the written. After some more studying, Ted again graciously agreed to proctor and this time I passed.

In those days, of course, a Novice *had* to qualify for a higher grade within one year (Novice term was one year, non-renewable), the code *had* to be passed before the written could be attempted, and credit was only issued for the code test if passed and the written failed at the FCC office; candidates for the Conditional were supposed to be retested on both even if the code was passed the first time.

I think today's rules are much fairer to the candidates, I think today's exams are perhaps *more* difficult than those of yesteryear (there is a lot more breadth of information to be covered, compared with '50s exams), and provided that a VEC session is fairly and honestly administered (and I'm sure that the vast majority are) the atmosphere must be *far* less intimidating than visiting the FCC office, especially that first visit. Bureaucracies are so *cold*..... :-)

And regarding the "question pools," you *have* to memorize the regs, frequency allocations, etc., but when it comes to the theory if you don't understand it to some degree you will *never* memorize all the possibilities unless you have a *very* exceptional memory. Besides, question pools have been around for the commercial exams for decades, and the FAA issues them for all aviation ratings. They're good study guides!

SB PROP @ ARL $ARLP046
ARLP046 Propagation de KT7H

ZCZC AP60
QST de W1AW
Propagation Forecast Bulletin 46 ARLP046
From Tad Cook, KT7H
Seattle, WA November 11, 1994
To all radio amateurs

SB PROP ARL ARLP046
ARLP046 Propagation de KT7H

Solar flux was headed down last week, and it should continue toward a minimum just below 80 around November 17 through 19. The next peak is expected November 25 to 27 with a flux around 94.

The roughest day last week was on the 6th when the A index was 24 and the K jumped to 6. Recurrent coronal holes should cause more instability around November 18 through 20 and 25 through 29.

Sunspot Numbers for November 3 through 9 were 53, 41, 46, 46, 23, 33 and 34, with a mean of 39.4. 10.7 cm flux was 87.3, 84, 83.4, 81.1, 82, 80.1 and 78.9, with a mean of 82.4.

The path projection for this week is from Omaha, Nebraska to Honduras.

80 meters should be open from 2300z to 1300z, peaking from 0200z to 1100z. 40 meters may be open around the clock, with the best period from 0000z to 1130z. 30 meters looks good at all times as well, with the best time around 2330z to 1200z. Check 20 meters around 1330z to 1400z and again from 1600z to 0000z. 17 meters should be open from 1430z to 2230z, and 15 meters from 1500z to 2100z. Check 12 meters from 1600z to 2030z, with the most likely propagation around 1700z to 1800z. 10 meters may be open on some days from 1630z to 2030z.

>and then, but it's not generally fatal. I sure as hell wouldn't want
>240v on my hair dryer, toaster, small power tools, etc.

Speaking as a sometime electrician, 240 volts can be somewhat safer than 110 volts. When you come in contact with 240, it normally knocks you away from it. You may get a burn, but you won't likely to be forced into a spasmodic grip where you can't get free of the voltage. The latter happens with 110 volts. That happened to me once. A drill with a case short caused me to spasmodically grip it after pulling the trigger. I couldn't let go. I managed to knock it out of my hand with the board I had in my other hand or I'd be a goner now.

A lower voltage isn't necessarily safer than a higher one. The body's response to different voltages is different. How the shock occurs, and where the current path travels through the body, are more important than the voltage (at household levels anyway).

It's true the Japanese government imposes a low power limit on it's
code test free licensees, but then it's coded licensees don't have
a 1.5 kW limit either. That's an internal decision, freighted more
on the dense population and concerns about RFI than any other factor.
The code test free Japanese amateurs are *not* limited to domestic
communications. I've worked many polite Japanese code test free
operators when the propagation is favorable.

>If that is indeed the case, perhaps the FCC could implement a similar
>strategy .... low power, domestic communications only, no code ......
>hey ... that sounds like CB to me. hmmmmmmm

Not to me. BTW Japan has a CB service too. It's totally different
from their amateur service. Like our anonymous CB, it's a zoo
of Samurai wannabes (they don't have the ignorant redneck trucker
stereotype to emulate over there). The difference in culture of
the two services is as marked over there as it is here. A Morse
Code test has nothing to do with it.

>in my book. It just takes just a bit longer to heat and make solder flow.

Golly gee. I just did my first PL-259 connector, and all I used was a 25W
iron, with a brand new tip.

(I changed my tip from a pointy one, to one that has something like a
chisled edge).

I remembered someone mentioned to me, it's not the wattage that counts, but
the _heat transfer_, so, use a larger tip for the job.

(Oh yes, it ruined my tip as well, but i could still use it for other
PL-259s after that...

Am I sprouting rubbish?

Rgds!

It might be if it *worked* that way. But Morse Code as a behavior
filter simply doesn't work. Proof of that is everywhere, from the
NALs that seem to cluster around Extra Class calls to the fact that
many of the worst behaving internet hams having Coded licenses.

>Perhaps as an alternative, for those with material physical problems,
>a written paper on number theory or even on cuniform literature could
>be offered. Just make sure that those who want to get the ticket prove
>that they REALLY want it and are willing to work for it!

Ah, the *effort* theory of licensing. It doesn't matter whether the
knowledge demonstrated is in any way relevant to the basis and purpose
of the service, or to the national goals set forth in the Communications
Act of 1934, or Part 97, just make them do menial rote work, IE *haze*
them, before granting a license. If this worked, college fraternities
would be models of decorum. Guess what, they aren't. Instead they are
often mean spirited narrow minded little cliques with an unwarranted
superior attitude.

My favorite is the Jones key, but it may be out of your price range since
it costs about $140. The Bencher is also nice and it costs less than
$100 in the painted black base version.

If they suspect the power supply, then get a 12v battery and hook it up to the rig in place of the Astron. Since the problem occurs during receive, you don't need a very big battery. If the problem goes away, the Astron is the cause, otherwise it's something else.

Ah, but if they didn't do this, we'd have fewer of those "zero to
extra" jumps. When I first tested, I was encouraged to do this. I
passed the 3B and just missed the 4A; another guy in my class got zero
to extra---and probably wouldn't have tried it without this kind of
encouragement.

Anyone know what this "jones key" is going for. I've seen ads in the past, and never got one because they wanted like $200 for it! Is that still the case or is it lower now? And if it still is, is it really worth the price?

If it's better, they can have my Bencher. It's a nice key, and it suits me fine, except for one thing. It needs more weight.

How to Use the WB7TPY
Packet <-> Internet Gateway

First, some brief operational notes:

(1) Messages must not contain any foul language, or commercial purpose.
(2) Messages can only be sent to countries that the United States has
a third-party agreement. All others will be destroyed.
(3) Messages from the internet should be less then 5K in length.
No files should be sent.
(4) If you have questions, please do not hesitate to contact me either on
packet radio: WB7TPY@WB7TPY.AZ.USA.NA -or-
Internet : david@stat.com

(5) Have fun. Use the gateway as much as you like. That is what it is
there for.

From Internet to Packet

Send mail to the internet address of:

gate@wb7tpy.ampr.org

The first line of text must contain a full packet address, preceded with the
word "Packet:"

For example, mail to my packet address, would have the first line of text;

Packet: wb7tpy@wb7tpy.az.usa.na

** NOTE: this line MUST be left justified.

From Packet to Internet

Send as private mail (never a bulletin) to the packet address of:

gate@wb7tpy.az.usa.na

The first line of text must contain a full domained internet address,
proceeded with the word "Internet:"

For example, mail to my internet address, would have the first line of text;

Internet: david@primenet.com

*** Remember, this has to be left justified

> GMR nor of the General Motors Corporation \/ |___

Hey wow... That last statement is one I like... ;-)

also, is/are there any code practice programs for UNIX?
or an on-line copy of the written exams?

I've been thinking about getting a Ham license for a long
time, and have periodically sat down and done some studying,
but hard-copy study discourages me sometimes -- I'd like to
be able to write a script or program that will take the
source of the written and generate a virtual exam that I could
take, and see how I would actually do -- something with the
correct number of questions from the correct subelements,
just like a VE would make up.

So if any of you know where I could get either the text
of the exams, or better yet an existing program like the
one I spoke of (preferably for UNIX, that's my OS of choice ;-)
that would be great!

Thanks.

Uh, Gary... how about a little reductio ad absurdum?

In 1940, to get a license one had to send AND receive Morse perfectly for at least one full minute, draw a schematic of some part of a transmitter (from memory, part selected by examiner) and explain the function of each part shown on the schematic. Some knowledge of electronic engineering mandatory.

In 1994, to get a license one has to find where the examining session is, make some marks on a paper and hope the marks landed on the right spots. Some knowledge of Ohm's law optional.

Without comment as to the validity of either test, I point out that the level of knowledge required to pass the former is much, much greater than the level of knowledge required to pass the latter.

-Oh yes, it's VERY important to keep those who are ignorant of electronics
-away from ham radio, where they might be able to learn by doing and
-by meeting folks who can teach them.

What we need (imho) is some way to convince new hams to continue to learn about ham radio. Too many people just memorize the answers to the questions and don't sit down afterwards to really learn the material. I too have been asked how to measure the output voltage of a 12V power supply with a DVM (by a new tech - that question *is* on the test), and an extra was complaining about a lousy TV picture after he extended his CATV coax with speaker wire...

While I agree that it is not necessary (or even possible) to be an expert about everything in ham radio, but hams used to take pride in their technical knowledge. How can we be depended on to perform emergency communications when so many of us can't rig up an antenna, set up a portable station, much less than actually fixing broken equipment out in the field or jury-rigging up a workaround for some critical problem in an emergency?

What can we do about this? Good question. Some people just need a bit of elmering. I run (with quite a bit of help) a weekly workshop here in Boston where people can come, get on the air (maybe that way some will get hooked on new modes or bands and even upgrade), work on equipment (we have a decent bench in the shack), practice their CW (thanks WX1G) or just get together and talk about ham radio. Offering classes, and actually explaining the material, really helps. Many new hams have gotten all of their information from Radio Shack and Now You're Talking. At least having someone around to answer questions helps. As for those who just want to chat on 2M and have no desire to learn any more than how to change battery packs, I am not sure.

73,
/mike

ps. Kit building workshops really do get people interested in the technical side of ham radio. BARC just finished a run of Dave Benson (NN1G)'s 40-40 transcievers, and at least 10 of them are now on the air. If you can, have someone come in and walk the group through the block diagram and schematic (thanks WB2CPU). It is such a good feeling to have a QSO with a radio you built yourself, and one that you understand how it works.

That's intersting in order to get the "Near Field" effect described I have to
drive within 50 yards of the tower, 50,000 watts on WOAI 1200. I cannot get
close enough with my truck to my 1kw AM to get this effect. The fence around
the base of th tower prefents me from getting that close.

>Since the station will be transmitting with 50,000 watts, your problem
>will be much more severe. If the proposed new location permits the

>have been known to interact with other stations in town and blanket TV

>receivers. Because of the frequency assignments, this problem will not
>happen with the AM station, but equally annoying problems are likely to
>occur.

The only problems I have ever had with Clean FM Transmitters we on
Non-Comercial FM's interfering with channels 5 and 6 on CATV and Channel 6
On-Air. In all cases a simple FM trap eliminated the problem. I have neven
seen a 10 watt FM have this problem, now 50Kw FM on 89.9, The houses within
the first mile had some problems. They all had Outdoor TV antennnas with
Preamps. Removing the AMP's or changing them to a good quality amp solved
the problem.

>the level of knowledge required to pass the latter.

No, just different. I'll ignore the Morse test since I think that's irrelevant anyway. As to the diagrams, there were four different oscillator circuits, and two PA circuits, that had to be memorized. You had to know the difference between a grid leak resistor and a screen resistor, the difference between a bypass capacitor and a tank capacitor. Useful knowledge no doubt, but not very deep. A ham from that era would be totally lost taking today's exam. He'd have no idea what many of the modes in use are.

It's true there are no vacuum tube MOPA transmitter diagrams on today's test, but that's mainly because today's ham will likely never encounter one. The ham test in 1940 didn't cover loose couplers either, but that was critical knowledge in 1920. Times change, circuits change, tests change. Ask a new ham from 1940 about synchronous HDLC and all you'd get is a blank look. The 1940 test didn't even touch on TVI, or ANSI exposure standards, or how to deal with pacemakers around RF emitters.

Today's test isn't as deep when it comes to vacuum tube circuits as the test of 1940, but it's breadth is much greater. If the test today went into the level of detail that the 1940 test did on vacuum tube oscillators for each of the modes available to today's amateur, it

would run several thousand questions.

>consider it a compliment.

Maybe, but there's something disappointing about it just the same. Before,
the questions were coming from someone who was trying to work up to a
Novice license. Nowadays, you're hearing them from Extra Class license
holders.

: In article <CynGJI.1t6@news.arco.com>, rll@apnissun1.corp.arco.com (Richard L. Lamb)
says:
: [chopped - bdt]
: >I'm looking for a way to generate high quality Morse audio for
: >code practice

you need to use a sine source with a gated output that will only switch on or
off when you are close to the zero crossing point. this will keep the "clicks"
out of the audio stream.

you also have to have manual control of recording gain (kill the dolby system
or dbx processor you might be using as well). put out a tone to set the level
just below saturation (helps to have a 3 head deck for this) to start.

as things go, initial experiements here with recording a soundblaster output
have not been all that bad. given the "quality" of the playback box we
use (a $20 panasonic mono cassette recorder) for tests, it will probably
be enough.

: VEs to handle all the paperwork during the licensing exam session.
: I am a newly accredited VE, and we administered our first exam
: session last night. There was no major disaster, and I have just
: sent all the necessary materials, both used and unused, to the
: ARRL/VEC. However, we got a bit disorganized when nine candidates
: turned in answer sheets one after another, and four VEs had to
: grade them, and hand other exam elements, and also had to issue
: CSCEs.

been there, done that...8)

: I would very much like to know how experienced VEs handle their
: paperwork efficiently. It is probably just a matter of common
: sense, and there are probably more than one best way to do this,
: but I would appreciate any tips from other VEs, or even from
: any examinees who could suggest anything for us. Please send your
: e-mail directly to me. Thanks.

: 73, Yuzuru Suzuki, AA1JA (e-mail address: ys@isr.harvard.edu)

first off, we don't worry about keeping the candidate roster up to date.
we fill that out after the session.

when people come in, we fill out a worksheet that has the check-in info
the candidate roster has on it, and we use a file pocket to put all the
candidate's paperwork in.

the file folder gets labeled with name and what elements the guy came to take.
the folder will initially have the 610, copies of licenses/credits and the
signed off CSCE.

the usual flow will be to check 610 for errors, inspect ID, check for
complete documents (original against copy, etc.), find out what they want
to take, fill out roster and label folder, get CSCE signed by candidate,
collect money, add name and address to CSCE, organize folders into groups
according to test elements required, rearrange seating as needed and start
test.

we're usually able to get two rooms adjacent to each other or with a
connecting closet so it's easy to set up one room for CW and the other room
for writtens..usually the CW room is also used for general/advanced/extra
testing as well.

when a candidate finishes a test, the results are graded and they go in his
folder. we either circle the test element for passing or X it for failure.

when a candidate is finshed, we fill out and sign off the CSCE if needed and the 610. candidate gets the CSCE copy and he's out the door.

On a typical saturday, we do about 20 people in about two hours over all, if we have to give all the elements...if everyone is just needing element 2 and 3A or there's a smaller crowd (reduced grading time) we can be done faster. larger crowds take longer.

it can help to have 3 VEs be "graders" and a couple more folks to act as expediters and troubleshooters to make sure things keep moving and you don't accidentally hold someone up.

after the session, you check the paperwork out again to make sure everyone signed off on stuff (sometimes the 3rd VE will sign off the CSCE but in the bustle get distracted and miss signing the 610...arrrgh!), then fill out the real candidate roster including all the detail about what exams they passed or failed, etc.

the typical session here is about 5 hours for me as the liasion from start to finish (dropping the results into the airborne box for shipping and printing out a set of PSAs announcing next month's exam and the results from this exam.)

you use printer mailing labels to make the file folders reusuable.

i think that's about everything....i might suggest using off color pens for marking the answer sheets...like something florescent and not all the same to make checking easier.

In an article, dickrb@lsid.hp.com (Dick Bingham) opined:

>No, you are NOT alone. I too wonder how much longer the excellent hobby
>of ham radio can last now that the skills and knowledge that use to be
>required to obtain a license have been reduced to that required to
>"operate" a door-bell.

Heck, I've seen several postings on rec.boating in which the writer asks why he (or she) cannot operate their ham transceiver on the marine SSB bands because they have a General Radiotelephone License. And then continue on to ask how come they didn't get call signs with their license.

These are people licensed to operate and maintain marine radio stations, radar equipment, and all types of shore-based transmitters who do not have even a rudimentary knowledge of these subjects. The amateur license is not the only one to have been rendered irrelevant due to lax testing requirements.

>I think we need to raise the entry level skills and really TEST for
>evidence of these skills. I am really saddened by much of what I read in
>the 'mags', here on the I.N., and what I hear on the air these days.

What! Actually make someone learn something? Boy are you gonna hear it. Heck, some old timers have actually forgotten stuff. And haven't kept up with modern technology. And, after all, isn't most of it useless anyway because people just buy their rigs and plug them in? There are lots of reasons why a new kid should just be given a license, if he (or she) wants one. Just like their high school diploma.

Just a note to remind everyone that there is an active Ham Radio channel
on IRC EFnet. There is also one on the UnderDog Net, but not as active.
If you are looking for a good server to use for EFnet IRC, try a one of
these:

irc.mit.edu
irc.bu.edu
irc.colorado.edu
irc.rutgers.edu

For UnderDog Net, Try:

sci.dixie.edu

When you access IRC, just join channel #HamRadio. See you there!

KENWOOD
Kenwood Comm. Corp.
P. O. Box 22745
Long Beach, CA 90801-5745

November 5, 1994
Dear Amateur Radio Club,

Kenwood is interested in developing a new way to communicate important information about Amateur radio to clubs, this is part of the Kenwood Information Highway!

We want to know if your club would like to be part of a Kenwood mailing list. This list will be composed of Amateur radio clubs throughout the United States. It is Kenwood's intention that this will be a new direct communications vehicle to our customers. Information that we will mail to you will include new product introductions, new technical brochures, radio modifications, and detailed explanations of advanced features such as cloning, cross-band repeater operation. In addition, we want to listen to you about Amateur radio. We can anticipate such ideas as visiting clubs to talk about new radio product designs and features that you want us to provide for you. We want to hear what is happening in the world of Amateur radio users.

If we see that there is interest on your part to hear from us, we can look for new and exciting ways to help and support you also. The opportunities of how we can create a real team effort in supporting Amateur radio as a fun hobby are only limited to our imaginations.

If your club is interested in receiving additional mailings from Kenwood, with opportunities to receive direct support to your club in the form of radio information, promotional activities and services, please fill out the enclosed form to be placed on our Kenwood Club List. I'm sure you will not be disappointed. I can foresee regular communications bewteen us with interesting and valuable information that can be used as a regular part of your club meeting activities. I hope you can envision this is as being an exciting opportunity. This

could be the beginning of a GREAT relationship!

Very truly yours,
KENWOOD COMUNICATIONS CORPORATION

Dear fellow hams:
I recently bought a Kenwood IF-232C computer interface (@ hamfest :)
which I intend to use with my TS440SAT HF rig.

The IF-232C came without manual or docs.

I suspect it to be just a TTL <-> RS232C level converter, which is fine.

Can anyone:

1. supply me with docs for the Kenwood IF-232C?
(I'll gladly pay for duplication/postage costs)

2. point me to where I can find out about the serial ASCII protocol used
to control Kenwood HF rigs? All I know about this interface is that it
works at 4800 baud.

Thanks for any help anyone can provide.
I would appreciate a cc of reply postings to ken@boxhill.com, in case I miss it
in the newsgroup.

Want to confuse a CW op? Use that series. "dit dah dit dit dit" is the
standby (/AS) prosign.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 12/2330Z NOVEMBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 12 NOVEMBER AND FORECAST FOR 13 NOVEMBER - 15 NOVEMBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 80/20

GOES satellite data for 11 Nov
Daily Proton Fluence >1 MeV: 7.2E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 1.3E+07 (normal)
X-ray background: A3.3
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
13 Nov 14 Nov 15 Nov
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 13 Nov: 80/20

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 11 Nov
Learmonth 5 2211 1222
Fredericksburg 5 6
Planetary 7 8

Observed Kp for 11 Nov: 2233 2212
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
13 Nov 6 Quiet
14 Nov 6 Quiet
15 Nov 6 Quiet

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH

12 Nov normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND

Just out of curiosity, is that because "[Amateur] Extra Class [licensees]"
spend proportionally more time on the air, or what?

Just because NALs positively correlate with Morse Code speed doesn't mean
that Morse Code causes bad behavior.

Please note the Followup-to: line.

: >The only reason for a government test is to use it as a forced recruiting
: >tool for Morse operators. If the mode needs government force in order to
: >remain viable, then perhaps it *is* time to retire it. But if you believe

: I'd like to see a post by someone from the ARRL on this. I *believe*
: that the international agreement on allowing amateur radio operation and
: designating specific frequency bands for amateur operation has a provision
: that applicants for amateur privileges in the frequency bands below 30 MHz
: must have a "demonstrated ability" to send and receive by ear in the
: International Morse Code.

That's absolutely the case, but several nations ignor the treaty
for some aspects. Even the USA presumes a send ability and only
tests for receive.

: I'm not at all sure if there is a speed
: requirement levied, and if so it probably is 10 WPM or less since many
: countries use 10 WPM as the requirement, while the U.S. has used 13 WPM
: since 1936 (by ARRL request to the FCC at that time; it was 10 WPM
: prior to that).

There is absolutely no code speed requirement. One (1) wpm would
be sufficient in any true legal sense.

: If, in fact, the code speed requirement is by international
: agreement, then the FCC *cannot* just "drop it." To do so would
: violate an agreement to which the U.S. is a signatory.

And not one other country would be able to do anything about it.

: Can someone knowledgeable on the *current* international agreements
: please elaborate on this issue? It might shed some light on this
: debate.

See my comments above, although all of this has been rehashed
every two to three months.

Oh dear...I've gone MONTHS and MONTHS without getting into the no-code argument, but here goes.

IMHO:

1. At first, the code was an essential skill, and it made sense to test for it.

2. Then it became a way to exclude people, keep the bands for only the dedicated, and keep the bands from turning into an international cb.

3. NOw, however, our bands are SO valuable that there is and will be tremendous commercial pressure to take them away from us. Our only hope of keeping much is the influence of commercial manufacturers who can make big bucks selling appliances to very large numbers of new hams. So we need slews of no-code hams to make the market worthwhile.

4. So, I say eliminate the code test, BUT set aside at least a little of each band EXCLUSIVELY for CW.

>And not one other country would be able to do anything about it.

That's also true for treaties on slaughtering whales, pollution of Antarctica and so on. Most civilized countries abide by the treaties once they have signed them. While it wouldn't make international headlines if the USA were to opt out of this one treaty, I suggest that it would need a better justification than the "cruel and unusual punishment" approach that I have heard here so far. Yes, some other countries ignore or attempt to get around some of the treaties, but in general we think less of them for doing it.

This topic (abandoning the treaty) is probably still being discussed at least once a week over on r.r.a.policy, and interested readers are invited to continue the discussion there, since it really does fall under the "policy" heading.

In article <Cz3B9C.3sx@news.hawaii.edu>,
Jeffrey Herman <jeffrey@math.hawaii.edu> wrote:
>jangus@skyld.grendel.com (Jeffrey D. Angus) writes:
>
>
>>Is it just me, or is there really an (in my opinion) alarming number of
>>people asking questions like;
>> Can someone draw a bridge rectifier for me?
>> How do I hook up my microphone?
>> Will my power supply I use on 2 meters work on HF?
>>When I was a Novice, I sat down with my Elmer ...
>
>
>Sounds to me as if the people asking the above questions are yearning
>for an Elmer. Why not extend the same helping hand to them that your
>Elmer extended to you rather than rambling on about ``in the old
>days...''
>

Jeff Herman is stating an argument that I agree with in principle. In
fact, it is an argument I offer in the intro to my Amateur Radio
Elmers Resource Directory:

->[...]
->
->Even more importantly, Elmers provided an outlet for the impatient
->newcomer who wanted "to know everything, and right away." Faced with
->such a request, a good Elmer will smile and proceed to lead the novice
->through some project or operating experience. Several hours, days, or
->weeks later, the novice would have his answers, but would have earned
->them. Even better, the sense of accomplishment would boost the novice's
->confidence and nudge him or her down the road to being a model,
->experienced ham operator.
->
->Many present hams feel that such an experience is missing today. In
->today's hustle-bustle world, the response to such natural curiosity and
->desire to learn is, more often than not, "I'm too busy" or "RTFM." As a
->result, the quality of new hams declines and the knowledge and operating
->habits they develop in their first formative months and years leave much
->to be desired. And the very same hams who claim that they "can't
->understand the new generation" also, in almost the same breath, lament
-about the "decline of amateur radio."
->
->[...]

However, in this case, Jeff Herman is demonstrating his uncanny ability to offer criticisms that boomerang back on himself. Jeffrey Angus *is* in my Elmers directory, and has offered much in the way of Internet Elmering if feedback from him and the users of my directory is any indication.

Jeff Herman, however, is noticably absent from my directory despite at least one invitation to join (perhaps he was intimidated by my one condition that he provide cheerful technical assistance to *any* sincere correspondent). This can remedied in time for the next monthly posting of the directory. What say you, Jeff?

2342. Exclamation Mark in the Morse Code

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-13 08:32:30 UTC
From: ys@isr.harvard.edu
Message-ID: <3a4iuu$1dr@scunix2.harvard.edu>
Source record: 257016

Apparently, before 1939, "- - . . - -" or <MIM> was used as the exclamation mark. Today it is used as the comma, of course. I have this information from "The Language of Maritime Telegraphy" by Barry Johnson in Morsum Magnificat, No. 34 (June 1994), pp. 40-42. I would like to know if <MIM> was really used as the exclamation mark before 1939. The following are excerpts from this article:

* <MIM> - This was the official prosign for the exclamation mark before it was officially changed to the comma as from 1 September 1939.

* There's also the marked contrast between theory and practice in punctuation. I never heard <MIM> used as a comma, though it was the most used punctuation signal for the one mark which was not prescribed - '!'.

As of this writing (at least at my site), no one has stated that what you are thinking of is the 240Vac service in the U.S. It's more like our 120Vac service, neutral tied to ground. So, you can't get 57.5Vac by going between any side and ground (or earth for you non-U.S.ers... :)

Unless otherwise stated, expressed view are my own. They may not be the opinions of my superiors, the U.S. Navy, the DoD, nor the U.S. government.

: so I am looking for an index of these magazines to find interessting articles.

: The magazines are availible at the Kaiserslautern University Radio Club
: and of intreresst to the whole university community.

Each December issue contains a comprehensive index of that year's QSTs.
Also, your club might consider buying the FBTO Index, published by Didah
Publishing, PO Box 7368, Nashua, NH 03060. It contains an index of ALL
the issues ever published (up to 1990) of QST, CQ, HAM RADIO, and 73, in
addition to a full index of the RSGB's RADIO COMMUNICATIONS since 1979.
It is available in either printed version, or on computer database for
easy searching.

For QSTs since January, 1993, a Digest of Articles has been prepared and
posted on this newsgroup. The compiler is not very skillful, but he
means well. :-) Back issues are available from the following archives:

ARRL telephone BBS

Dave Austin <daustin@solano.community.net> wrote:
>It seems like pretty nice stuff.

I couldn't let this pass without comment.

PC Electronics ATV gear is junk. It puts out a double sideband signal with no output filtering whatsoever, and the signal is far too broad and just plain dirty. If you use it, you WILL interfere with other users anywhere within 8 MHz of your carrier frequency, _on either side_. If you have one on 421.25, you _will_ radiate significant amounts of energy out of the amateur band, and the folks immediately below 420 MHz are government users who do not take kindly to being iterfered with. If you put one on 434 MHz, you _will_ radiate in the satellite band and weak signal band.

Don't believe me? Put one on a spectrum analyzer.

The owner of PC Electronics refuses to do anything about his junk, either; he has stated in print that he thinks ATV should have priority on the entire 420-450 MHz amateur band.

Help stamp out crap on the amateur bands. Don't buy PC Electronics gear.

[I am reposting an article that appeared in this month's newsletter of the Boston Amateur Radio Club. The article was prompted by the tragic death of a fire fighter earlier this year, who was a close friend of the article's author, Terry Koen, N1IWF.

Terry's telephone number is listed at the end of the article. Tnx and 73, Phil K9HI.]

A CHALLENGE TO THE CLUB

by Capt. Terry Koen, N1IWF
Boston Fire Deptartment, Engine 33

This past summer, Boston Fire Dept. Lt. Stephan Minehan, was killed in the line of duty when he could not be located, and it had become obvious that he was in trouble and he could not find his way out of the burning warehouse.

In reminder of this tragedy the challenge is for some one to DESIGN and BUILD a transmitter or transponder that could be turned on by both a fire fighter or a tracking team trying to locate a fire fighter.

The directional radio finder would need to be sensitive to both direction and altitude, so that not only a bearing could be determined for a lost/ injured fire fighter, but also what floor the fire fighter is on.

The transmitter needs to fit in a box approximately the size of a box of cigarettes. The directional finder can be almost any size, so long as it can fit in a Boston FD Communication van.

It is also important that the design of the transmitter allow for the building of many transmitters. It is obviously advantageous that once a fire fighter or communications van turns on a transmitter associated with a fire fighter, that the transmitter has a way of identifying itself uniquely from the other transmitters. It is even more important that the operator in the van can choose which transmitter to turn on. This is not an insignificant challenge; multi-path and reflected signals are a problem, but they can be overcome. Perhaps with multiple antennas connected to the radio direction finder. Anything worthwhile is rarely easy, but what is worthwhile more than saving a life?

Perhaps it will take a few of you homebrew people to come up with a solution. But I am willing to talk with you about the rigors the electronics would need to be able to withstand, the hostility of the RF environments involved, and to help you with life-like testing.

For more information on this challenge you can reach me at Engine 33,
(617) 725-2880 ext. 2833.

2350. K1BV DX Awards Directory FB

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-13 15:55:17 UTC
From: johnr36213@aol.com
Message-ID: <3a5ct5$516@newsbf01.news.aol.com>
Source record: 256906

Let me add that K1BV's director is the most comprehensive awards compendium ever published! I've been using it for years and have tallied more than 300 awards to date. The book pretty much eliminates the blatant ripoffs -- Easter Island and Pitcairn awards, for example -- so you don't generally kiss your moola goodbye. The detail and up-to-the minute information puts even the formerly venerable RSGB awards book to shame. If you're into colleting wallpaper, this is the book for you.
An unsolicited testimonial.....

From: wa2ise@netcom.com
Message-ID: <wa2iseCz85Mq.4Hq@netcom.com>
Source record: 256893

Something I found helps a lot in soldering the PL259 connector onto the coax braid is to file off the shiny plating around the solder holes down to the brass before placing the connector onto the coax.

Pre-tin the filed areas before putting it on the coax. This way, you won't spend a lot of time heating the connector trying to get the &^@#$# solder to wet the plating as your coax melts.

That's the character for the comma. I repeat there is no morse code for the exclamation point

Well, "--..--" is the comma...

I've never seen an International morse (!), but the old American morse
used, "_ _ _ . " if I'm not mistaken.

Just wanted to know if anyone in Reno reads this newsgroup. If
so I would like to know some of the VHF/UHF frequencies that are used in
Reno. I am studying for my exam and would like to listen in on a
scanner. I am aware of a couple of repeaters but I know there must be
more.

Yes, but how have these Extras and Advanceds gotten this far without having learned this stuff before now? I think it's a clear indictment of the test difficulty levels and published answer pools. Why are we awarding our most prestigous license class to people who have so little technical ability? A valid question asked by a Novice or a Tech *can* be called dumb when asked by an Extra. If you say it doesn't happen, let me tell you about the conversation I heard recently between three hams, one an AA6??, about how many micros were in a pico (that's how they framed it). Not one of them had a clue.

I agree. My wife passed her general written exam, and probably never
would have tried it without the encouragement of the VEs. The positive
attitude about chances for success are very encouraging to a lot
of people who come to exams with little confidence.

My wife was pretty high for days after passing. She was sure that
she didn't know enough to even attempt it.

When my 8 year old first took his novice exam, he answered 40 out of
the 30 questions. The second time he missed the passing mark by quite
a few. The third time he passed, but achieved a pure guessing score
on his technician (which he subsequently passed on his third try).

What was great for him, was that at each attempt he did better, which
encouraged him to study harder. The VEs were extremely supportive
and encouraging to him at each step.

He is now working on his general, and doesn't see what will stop him
from extra.

In many ways the VE exams are the doorkeepers of amateur radio. The positive,
encouraging attitude of all the ones I have met creates a warm invitation
to the hobby -- and I am grateful to them for it.

>: not, what's the biggest leap anyone has heard of? I took someone to an
>: exam site, and he went from Tech + to Advanced in one leap -- passed the
>: 13 wpm, general, advanced, and even the extra exam. Couldn't quite handle
>: the 20 wpm, however.

I don't think it is too hard. I have an EE background, and went from
zero to General in my first exam. I think I missed Advanced by only
one question, but I hadn't even opened the book because I was too busy
helping my wife and kids study for their exams.

[Actually I had a two-year novice license in 1970, so I wasn't going
from exactly zero].

It turned out well though, because I had intended to stop at Advanced
(daunted by the 20 WPM) -- but I found a CW program for my computer and
decided to go for Extra, which I passed the next month.

I think what it takes is just a lot of commitment and interest (I enjoyed
reading the ARRL books and understanding how it all fits together -- people
who take the just-study-the-Q&A approach are really missing out).

I think that everybody should become an Extra. Maybe there need to be
higher classes of licenses. Even though I have an Amateur Extra License,
the folks out there talking CW at > 35WPM and who can design antennas and
radios should have additional recognition.

I guess I am saying that I thought it was a little too easy.

2376. The Amateur Radio BBS...

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-14 06:21:21 UTC
From: howardl@wb3ffv.wb3ffv.ampr.org
Message-ID: <Cz8uzL.57D@wb3ffv.wb3ffv.ampr.org>
Source record: 256920

```
+-------------------------------------------------------------------------------+
HOW TO ACCESS THE WB3FFV AMATEUR RADIO TELEPHONE BBS !!!

I have placed a BBS system on-line that is mainly oriented towards the
Amateur Community (but there are plenty of other wares on-line). Through
user support I hope to keep the latest and greatest ham software on-line.
The BBS also offers access to nearly all of the Internet (USENET) NetNews
groups, plus access to Internet E-Mail. Below is the information that is
needed in order to access the BBS via Telephone, Telnet, or FTP. Please
pass it around to as many ham's as possible.

System Name: WB3FFV
User Login: bbs

410-661-2475 - 12/24/48/96/14.4/16.8/19.2/21.6/28.8
(V.32bis,V.32terbo,V.34,V.FC,HST,V.42bis)

410-661-2598 - 12/24/48/96/14.4/16.8/19.2/21.6/28.8
(V.32bis,V.32terbo,V.34,V.FC,HST,V.42bis)

410-661-2648 - 1200/2400/4800/9600/14400/23000
(MNP2-5, V.32bis, V.42bis, Turbo-PEP)

TELNET/FTP - wb3ffv1.sed.csc.com (20.2.1.80)

Data Settings: 8 Bits, NO Parity, 1 Stop Bit
Times: 24hrs/365days (except for routine maintenance)
Software: UniBoard UNIX BBS Software (Version 1.30b)
Misc. Info: Machine is an Pentium-90/MP running UNIX System V Release 4.2
and features more than 4 Gigabytes of on-line file storage.
Most transfer protocols are available!!

I attempt to keep the latest and greatest HAM software on-line, and encourage
all to upload anything new that they come up with, as it is of benefit to all.
Here is a sample of a couple pieces of software that is available for DOWNLOAD:

KA9Q TCP/IP Software for the PC (Latest OFFICIAL release + TEST Versions)
KA9Q TCP/IP for the Atari-ST, MAC, & Amiga
KA9Q TCP/IP for UNIX based systems
KA9Q TCP/IP (The NOS release) [UNIX, MS/DOS, Amiga]
KA9Q TCP/IP (Version by G1EMM, PE1CHL, PA0GRI, Etc.)
N2GTE Packet Message Switch [GTEPMS]
WA7MBL BBS for the PC
W0RLI BBS for the PC
MSYS BBS for the PC running KISS TNC's
AA4RE BBS for the PC (plus BETA versions)
F6FBB BBS for the PC
```

G8BPQ PC-Node (Version 4.08)
Various BBS utilities and enhancements
Several MORSE CODE Tutors
TheNet software by NORD><LINK
Modifications for many HAM Rigs and Scanners
Digital Signal Processing software (DSP)
DX and contesting programs

If you are interested in using UUCP to connect to the BBS, this can also be done as I support Anon-uucp. The login to the system is 'uucpanon', and there is NO password. The listing of avalible archives are stored in a file called 'FILES', and it is located in the /var/spool/uucppublic. To retrieve the files listing just use the following command:

uucp wb3ffv!~/FILES /usr/spool/uucppublic (ASCII Text)
-or-
uucp wb3ffv!~/FILES.Z /usr/spool/uucppublic (16-Bit Compressed)
-or-
uucp wb3ffv!~/FILES.gz /usr/spool/uucppublic (GNU Gzipped)

This will move a copy of my files listing into your uucppublic directory.

If you want to access the BBS via Telnet all you have to do is TELNET to wb3ffv1.sed.csc.com, and login is 'bbs' with no password required. To use anonymous FTP just ftp to wb3ffv1.sed.csc.com and login as 'anonymous'. This system is currently attached to the Internet via a dialup SLIP link, and should generally be available 24hrs, but at times the modem will drop the line. Also since this isn't the fastest link, I will be limiting the maximum number of anonymous sessions for the moment.

If you have any questions or problems, feel free to contact me at one of the numbers/adresses below. Good Luck...

Internet : howardl@wb3ffv.ampr.org | Howard D. Leadmon
UUCP : wb3ffv!howardl | Advanced Business Solutions

In further defining my "question" and obtaining data for a senior independent study project, I have the following questions:

I would like to hear how people make contributions to the public good of the Net. I have understood these contributors in a previous paper to be "Netizens", or Net Citizens (a net.citizen). Examples of contributions have been people who volunteer their time to write up FAQs, make code freely available which increase functionality or efficiency (B-News, C-News, Gopher, Lynx, Mosaic, etc etc), producing summaries of answers to Usenet posts, lists or indexes compiling real-life information or net information.These are just a few examples I can think of. I would like to hear of

1) Other examples, or occurrences of contributions that fit as contributions to the Whole of the Net (whether it be for Usenet, Internet, IRC, WWW, etc etc.)
2) What have you found to be especially valuable contributions?

My basic criteria is looking for how people "give back to the Net," or nurture the net. I am not as interested in hearing how people produce something for the net for a profit. Inherently, what gets produced will be less useful when the prime concern is profit rather than the purpose.

I am also more interested in the actual deed rather the the name of the person who did the deed.

I am interested in people's cooperative building of the Net and its resources. I see this as the actual construction of what the Net is. This is how the Internet and Usenet, etc are different than Compuserve or AOL where the commercial provider "defines" what is available to their "subscribers." I am interested in hearing how Netizen's "define" the Net they use. I ask to better understand the affect we all have on the Net, and in turn on the rest of the world ("In Real Life"). I am also interested in hearing how people have contributed to the Net for the needs of the job, whether or not the benefit is immediately apparent.

In addition to the actual contributions on the Net, I am interested in any recommendations people could make on theoretical references. I mean books or articles that would be valuable background in defining "the public good," or "public spaces."

Lastly, I am also interested in how people's efforts online have made valuable contributions to the world off the Net and to those not connected to the Net. All contributions to the Net effectively help the rest of the world via helping those connecting to the Net, but I am also interested in how elements in our society which are not directly connected to the Net are affected.

Please reply either publicly in followup, or email me at hauben@cs.columbia.edu. I will contribute my resulting paper to the Net.

Some of my contributions to the Net are available at my WWW home page at http://www.columbia.edu/~hauben/index.html

thanks,
-Michael

Jay,

I also could not let your posting go by without commenting.

Yes, PC Electronics ATV transmitters are AM double sideband. To the best
of my knowledge, all other amateur ATV trasmitters on the market transmit
AM double sideband with the exception of a very few built by Wyman
research of Indianna, and HF Technology of Illinois that transmit FM
on the 23 and 13 centimeter bands. These units require approximately
12 megahertz of spectrum to operate. The FM transmitters are used widely
in Europe, but are not very popular here in the USA.

I will not go into the pro's and con's of either system here.

AEA did build an ATV transmitter for a period of time that was advertised
as VSB transmitter. After reading their advertisements, I would have to

say that AEA was very misleading in their ads. They advertised that by using their Vestigal Sideband transmitter, that more of your energy was put out the antenna on the upper sideband. This was not true, because they used nothing more than a simple saw filter to take out the lower sideband of their AM DSB signal. The fact also remained that when used with an amplifier, the lower sidband was re-inserted during amplification.

Have you really looked at the PC Electronics transmitters on a spectrum analyzer? There really is not much energy past about 1.24 Mhz away from the main carrier with the exception of the color burst signal at 3.58 Mhz and the sound sub carrier at 4.5 Mhz away from the main carrier. Most of the other energy is probably about -40dbm or so. You are correct in saying that if you put a AM DSB ATV signal on 421.25 Mhz that you will also be transmitting outside the amateur bands.

The trick to all this is filtering. I happen to own quite a few PC Electronics transmitters, and find that they work very well. I have had a problem with one transmitter, and one receiver that Tom, W6ORG fixed with no questions asked, even though the transmitter was almost 1 year old. I will have to admit though, that at times that I have talked to him on the phone, he has not seemed to be very informative about the questions that I was asking. I suppose that I would probably be that way also if I had to work in the amateur radio industry.

I also happen to own and operate what is called the Valley Vision ATV repeater here in central California. It has been on the air for several years now, and has most recently been on the air continuously 24 hours a day since October of 1993. When the repeater is not being used, it is still on the air transmitting and goes through several I.D. screens. When someone puts a video signal on the input of the repeater, the I.D.'s go off and their picture is retransmitted. Most of the hams in this area want the repeater on full time so that they can build and test different receiving devices, antennas, etc.

My repeater consists of PC Electronics receiver, PC Electronics controller, PC Electronics transmitter, Elktronics ID board, Lindsay antennas, Mirage D-1010 ATVRN ATV repeater amplifier, International Crystal interdigital filter, and a DB products harmonic filter.

When I first put up the repeater, I did have problems with lower sideband energy bothering a link receiver that had its receive antenna about 3 feet from my ATV transmit antenna. I was using a small cheap home brew interdigital VSB filter. The real problem was that the link receiver was operating on 422.75 Mhz, exactly 4.5 Mhz below my main 427.25 carrier. The other problem was that associated link transmitter on 425.75 generated a third harmonic that completely destroyed my ATV receiver on 1277.25 Mhz. I worked with the owner of the repeater that used the link receiver and transmitter, and between us, we worked out the problems.

Since there did not seem to be any way to reduce the third harmonic from the link transmitter because of the close spacing of the antennas, I had to change my ATV receive frequency to 1265.25 Mhz. That solved the

problem. Next I went to work on the LSB audio sub carrier problem. The homebrew interdigital filter that I was using on the 427.25 output was a 4 pole design. At first I tried lowering the audio sub carrier injection of the ATV transmitter, but found to get it low enough not to effect the link receiver, the audio was very noisy on all the ATV receivers. I looked at the ATV signal on a spectrum analyzer, and found that even though my home brew filter was rolling off the lower sideband signal, it was not attenuating it enough. The solution was to turn off the audio sub carrier, and order a proper filter. I bought and installed an International Crystal Mfg. interdigitial filter, and that took care of the lower sideband problem. After installing the filter, I was able to turn up the ATV audio sub carrier injection to normal levels (-10 below main carrier) with absolutely no effects to the link receiver on 422.75 Mhz. The filter is located after the amplifier.

I have again looked at the ATV transmitter on a spectrum analyzer. I have found now, that with the proper filter installed, that all the LSB energy below 1.25 Mhz below the main carrier is greater than -50 dbm below the main carrier. In fact, about the only thing that can be seen above the main carrier is the color burst and the audio sub carrier.

I know that most folks that have link receivers and transmitters do not understand how ATV operates. Do you happen to operate links in the 420 Mhz band? I have actually had several people that did not believe that they could operate near the ATV signal. I invited them to join me on narrow band QSO near the ATV signal. They could not belive that they could not hear the USB audio sub carrier on their narrow band FM rig. In fact, since our ATV transmitter is horizontally polarized, I can hardly even detect the ATV main carrier on channel with my narrow band FM rig on a vertically polarized antenna.

You say in your message that we should not use PC Electronics equipment. What brand do you think we should use? There are only about 3 or 4 manufacturers of ATV equipment here in the U.S. As far as I know, they all produce double sideband AM transmitters for the 420 Mhz band. I assume you know that AEA quit manufacturing their VSB transmitter. Even if someone was to make VSB transmitter, that the LSB signal would be re-inserted when the user stuck it into an amplifier.

So, what do you propose that we do to operate on ATV? You should probably understand that ATV is becoming more popular, and there are lots of folks getting on to this mode every day. I believe that perhaps you should read up on ATV and the way it works.

By the way, after reading your message, I assume you either operate a link system, or satellite in the 420 Mhz band, which do you operate?

Okay, consider this: 10 or more years ago no one had a public forum
in which to pose these most basic questions. Don't think these questions
didn't exist for they did - it's just that there was no worldwide
audience as we have on here (and on the other newsgroups). One either
had to search out someone to answer these most basic questions or
at least be pointed in the right direction (I was always told to
``... go look it up in the Handbook, then if you still don't understand
come back and I'll explain...'').

You can do the same: Gently tell them where to go (look up the info)
and if they still have questions then come back. Most libraries have
enough radio and electronics books on hand to answer just about any
question.

But I do have to admit, it *is* much easier to just type Pnews
and pose a question to the experts on these groups. You get
your answer(s) quickly and you've boosted a few egos in return.

Maybe the distinction between `looking it up' and `posting it
to the newsgroup' is lessening. At least by posting an article
one is *writing* and thus is forced to recall spelling and rules
of grammer.

Jeff NH6IL

: Ah, the *effort* theory of licensing. It doesn't matter whether the
: knowledge demonstrated is in any way relevant to the basis and purpose
: of the service, or to the national goals set forth in the Communications
: Act of 1934, or Part 97, just make them do menial rote work, IE *haze*
: them, before granting a license. If this worked, college fraternities
: would be models of decorum. Guess what, they aren't. Instead they are
: often mean spirited narrow minded little cliques with an unwarranted
: superior attitude.

: Gary
: --

Geez, more of Gary's confounding logic:
"Effort equals hazing equals fraternities equals narrow minded little
cliques, therefore requiring effort to gain Amateur Radio priveleges
is wrong."

Gary, do you really think people don't take more pride in things they
gain with effort than in things they gain without??? You think hams
are (generally) well behaved because they know a little electronics, a
few regs, or even Morse Code? Nope. There are two reasons hams are
(generally) good and responsible operators: First, most of the
Amateur community sets a good example for new hams; Second, people
take pride in their achievements. They work hard for the priveleges
their license grants. Pride fosters mutual respect.

Fortunately, the things we are asked to work hard on...theory,
practice, regulations...are relevant and beneficial to Amateur Radio.
Actually, requiring advanced number theory or cuneiform literature
(though suggested in jest) would probably have the same effect. And,
heck, since everyone is so super-consciencious, they'd surely just go
ahead and learn everything they really need to know on their own
anyway, right Gary?

Nope, trick answer! I noticed that Super Morse uses the "!" to
represent the prosign _AS_ ("wait"). Since there are no prosigns on
the computer keyboard, it has to use something. It is kinda
misleading.

I have sent many messages via the gateway, and they never get through.
I have sent plenty to k3sro, and he said he got none (on the phone).
So much about the gateway.
I would like an acknowledgment saying if the message passed the gateway or
not. At least then I would know whom not to blame.

How to find the Rec.radio.amateur.misc Frequently Asked Questions list
---

This article will tell you how to find the answers to frequently-asked
Questions (FAQ) from rec.radio.amateur.misc. The FAQ articles are posted on
the 7th and 21st of each month. This article is posted on the 14th and 28th
of every month as a reminder of where to find the FAQ.

The FAQ articles are intended to summarize some common questions on the
rec.radio.amateur.misc newsgroup and Info-Hams mail list as well as to help
beginners get started.

Besides the monthly posting, the FAQ is always available via anonymous FTP
and from e-mail servers. This article contains instructions for obtaining a
copy of the FAQ. It also contains the table of contents from the FAQ so
that you know which questions are covered by it.

Please provide a copy of the FAQ to any new or soon-to-be Hams you know.

Regular FAQ postings can help save network bandwidth and maintain a good
signal-to-noise ratio in the newsgroup. However, they can't do it alone - you,
the reader, have to use them. If you are a new user, please print and review
the FAQ articles and look at the instructions in the news.newusers newsgroup
before posting any articles. If you are an experienced user, please help by
refraining from answering frequently-asked questions on the newsgroup if they
are already answered by the FAQ articles. Instead, send e-mail to the user who
asked the question. (It will be helpful if you include the part of the FAQ
that answers their question, but not the whole thing.)

--How to obtain a current copy of the FAQ----------

There are 7 ways to obtain a copy of the FAQ.
1) World-Wide Web (WWW) and Mosaic
2) NetNews
3) Anonymous FTP
4) An Electronic Mail Server
5) Mail List Subscription
6) Gopher
7) Wide Area Information Server (WAIS)

Option #1: World-Wide Web (WWW) and Mosaic

The World-Wide Web (WWW) has experienced explosive growth in usage in 1993

and 1994. WWW clients like Lynx (in ASCII text) or Mosaic (X/Mac/Windows) can display the FAQ from many different sources. Each source is named by a URL (uniform resource locator.) If you are one of the growing numbers of people with Internet access, Option #1 is your choice. The following URL can be used to find the FAQ:

http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/ham-radio/faq/top.html

Other services listed later in this article are also accessible with WWW at the following URLs:
news:rec.radio.info
file://ftp.amdahl.com/pub/radio/amateur
file://ftp.cs.buffalo.edu/pub/ham-radio
file://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/faq
file://grivel.une.edu.au/pub/ham-radio/buffalo/ham-radio
file://nic.funet.fi/pub/ham/info
gopher://cc1.kuleuven.ac.be/
gopher://jupiter.sun.csd.unb.ca/
gopher://gopher.univ-lyon1.fr/
gopher://ftp.win.tue.nl/
gopher://gopher.win.tue.nl/
wais://rtfm.mit.edu/usenet

For more information on WWW, see the comp.infosystems.www newsgroup. Also, the help options on your WWW client should be able to point you to lots of information all over the world.

Option #2: NetNews

If you are familiar enough with NetNews to look through previous articles on your system, Option #2 above may be the easiest for you. The FAQ is posted so that it should not expire from your site's news spool until the next one is posted. Unfortunately, some news administrators do not honor the expiration dates meant to preserve the FAQ.

Look in rec.radio.amateur.misc, rec.radio.info, rec.answers, or news.answers. If the FAQ has expired at your site, try Option #3 (and ask your news administrator to honor expiration dates for articles cross-posted to news.answers if he/she can.)

Option #3: Anonymous FTP

Anonymous FTP uses the File Transfer Protocol. It is only available to sites which are directly connected to the Internet. If you don't know how to use FTP and can't find a friend to help you, continue to Option #4. If your site is not connected to the Internet, you should also continue to Option #4.

The following sites have copies of the FAQ:
site name & address path to FAQ articles
--- ---
ftp.amdahl.com pub/radio/amateur/faq.[1-3].Z
located in western USA, FAQ updated daily

ftp.cs.buffalo.edu pub/ham-radio/faq_ham_[1-3]
located in eastern USA, FAQ updated monthly
rtfm.mit.edu pub/usenet/news.answers/radio/ham-radio/faq/part*
located in eastern USA, FAQ updated monthly
contains news.answers archive - most UseNet FAQs are here
grivel.une.edu.au pub/ham-radio/buffalo/ham-radio/faq_ham_[1-3]
located in Australia, FAQ updated monthly
(Ham files mirrored from buffalo/funet/ucsd daily)
nic.funet.fi pub/ham/info/faq_ham_[1-3]
located in Finland, FAQ updated monthly

Remember, when connecting to the remote system, use the login name of
"anonymous" and, as a courtesy to the site administrators, your e-mail address
for the password.

Option #4: Electronic Mail Server

If you can't use Options 1 or 2, your only remaining option is electronic mail.
You can retreive a copy of the FAQ by sending a message to
mail-server@rtfm.mit.edu

The body of your mail will contain a command for the mail server software.
To get all of the FAQ (consisting of 70K of e-mail in 3 parts), place the
following in the first line of your message:
send usenet/news.answers/radio/ham-radio/faq/*

Leave out the subject of your message because the mail server will ignore it.

--- begin sample mail message ---
To: mail-server@rtfm.mit.edu
From: me@here.org
Date: Mon Aug 14 22:27:33 PDT 1995

send usenet/news.answers/radio/ham-radio/faq/*
--- end sample mail message ---

Option #5: Mail List Subscription

If you prefer, you may get the FAQ and other periodic Ham Radio information
as it gets posted. All the information posted to rec.radio.info can be
obtained through the UCSD list server via the "radio-info" mail list. To
subscribe, send an e-mail to
listserv@ucsd.edu
Similar to the e-mail server listed above, just send a single-line message
subscribe radio-info
If you need more information, the listserv program also accepts a "help"
command. Just keep it on a separate line in the message.

Option #6: Gopher

You can access gopher servers on TCP port 70 (gopher protocol) at the
following locations which carry the Ham Radio FAQ:
cc1.kuleuven.ac.be

jupiter.sun.csd.unb.ca
gopher.univ-lyon1.fr
ftp.win.tue.nl
gopher.win.tue.nl
For more information on gopher, see the comp.infosystems.gopher newsgroup.

Option #7: Wide Area Information Server (WAIS)

In addition to the other services mentioned above, rtfm.mit.edu offers a
WAIS server on TCP port 210. Use the "usenet" database to access the FAQ.

For more information on WAIS, see the comp.infosystems.wais newsgroup.

Table of Contents

Dates indicate last modification.

Part 1 - Introduction to the FAQ and Amateur Radio
** Table of Contents (10/94)
** Introduction to the FAQ (11/92)
* How to Contribute to the FAQ Articles (6/93)
* Please Send Questions to the Newsgroups, Not the Editors (9/94)
* Call for FAQ Editors (8/94)
* Acknowledgements (6/93)
* Notes on "Netiquette" (1/93)
** What is Amateur Radio? (11/92)
** Who can become a ham? (6/93)
** Where can I locate information and books on Amateur Radio? (9/93)
** How much does it cost? (9/92)
** Where can I take the tests? (9/93)
** What are the tests like? (6/93)
** What can I do with a ham radio license? (5/92)
** What can't I do with an Amateur Radio license? (pre-4/92)
** I'm interested, who will help me? (11/92)
** Should I build my own equipment or antenna? (11/92)

Part 2 - Amateur Radio Organizations, Services, and Information Sources
** Where can I find Ham Radio information with a computer? (8/94)
* Mosaic, World-Wide Web, Gopher, and WAIS (8/94)
* The rec.radio.* newsgroups (2/94)
* The ARRL e-mail server (1/93)
* The KA6ETB e-mail "HAM-server" (10/94)
* The Internet File Transfer Protocol (FTP) (2/94)
* Access to FTP archives via electronic mail (1/93)
* The Ham-Radio mail list: rec.radio.amateur.misc by mail (9/93)
* Telephone BBS's with Ham-related information (9/93)
* Callsign servers and geographical name servers (1/94)
* FTP access to FCC Part 97 and FCC Amateur Radio question pools (1/94)
* Lists of radio modifications and extensions (2/94)
** Can I send ARRL or W5YI electronic mail? (11/92)

** "Why doesn't the ARRL do...?" (11/92)
** What magazines are available for Ham Radio? (pre-4/92)
** How do I use the incoming and outgoing QSL bureau? (11/92)
** Are there any news groups for CAP? (11/92)
** What's the name of the QRP club that issues QRP numbers? (9/93)
** How do I become a 10-10 member? (9/93)
** How do I join MARS? (9/93)
** How do I join RACES? (pre-4/92)
** What organizations are available to help handicapped hams? (pre-4/92)
** I am looking for a specific ham, can anyone help me find him? (6/93)
** Can I post my neat new ham related program on rec.radio.amateur.misc?
(pre-4/92)
** Where can I get ham radio software for my computer? (9/93)
** Are there Dialup News services or BBSs for Amateur Radio? (4/92)
** Where can I find VE sessions in my local area? (9/93)
** Why isn't XXX available electronically? (1/94)
** I'd like to volunteer to help ham radio through electronic
information services like those mentioned in this FAQ list.
Where should I start? (2/94)

Part 3 - Amateur Radio Advanced and Technical Questions
** What are the different US amateur classes and what can each of them do?
(pre-4/92)
** What is the best way to learn Morse Code? (10/92)
** What is the standard for measuring Morse code speed? (pre-4/92)
** What is the standard phonetic alphabet? (10/94)
** I'm confused. What do all those abbreviations mean??? (6/93)
** What do all those "tones" mean? (pre-4/92)
** Where can I learn more about Amateur Radio if I live outside the US?
(9/93)
** How can I get a "reciprocal license" if I am a licensed ham from another
country or if I am a FCC licensed ham who wants to operate in another
country (on vacation)? (9/93)
** My apartment or housing complex does not allow outdoor antennas, now what
do I do? (9/93)
** I got TVI...HELP!!! (9/93)
** On what frequencies do JPL and GSFC retransmit the shuttle audio?
(10/92)
** Can I take my HT on an airplane and operate it if I get the permission
of the captain? (4/92)
** How do I modify my current Amateur license? (9/93)
** I'm confused about XXX, should I ask the FCC? (9/93)
** Is there any information on antique radios? (pre-4/92)
** Where can I buy vacuum tubes? (9/93)
** What do I need to get started in packet radio? (9/93)
** What do I need to get started in satellite communications? (9/93)
** What is available to get started in ATV, SSTV and WEFAX? (9/93)
** What are these contests I sometimes hear, and how do I participate? (9/93)

--Asking Questions---

If you have questions about Amateur Radio (a.k.a. Ham Radio), please read the FAQ. If your question is not answered there, check if you have any other sources (i.e. Mosaic/WWW) before proceeding. If you still don't have an answer, post your question to the most appropriate rec.radio.amateur.* newsgroup. And be sure to mention where you have already looked for the answer so people won't mistakenly tell you to try them again.

Thank you for doing your part to conserve network bandwidth!

--Submitting changes for the FAQ----------

If you have comments or updates for the FAQ, send e-mail to
hamradio-faq@amdahl.com
This will send mail to all the people on the FAQ editorial review group.

--Call for FAQ Editors----------

As with any volunteer effort, new volunteers are often needed. We need a new editor to post the Ham Radio FAQ. Preferably this should be someone who has enthusiasm for Ham Radio, experience with UseNet, and the ability to work with the other editors. No single person can know all the various aspects of this diverse hobby so the editorial review group is intended to make a greater combination of experience.

The FAQ is currently posted with the AUTO-FAQ software, which is written in PERL. So it would be a plus for volunteers to post the FAQ to have PERL installed on their system and be able to use "cron" or "at" so that postings can go unattended.

Anyone who wants to make their contribution to the Net as a volunteer should contact hamradio-faq@amdahl.com.

SB NEWSLIN @ ALLBBS $NLIN.900
Amateur Radio Newsline #900 11 Nov 1994

Amateur Radio Newsline is produced as an audio service by Newsline, a service of the Westlink Radio Netowrk. The transcribed version is produced by Dale Cary, WD0AKO from materials provided by Newsline. and is jointly distributed to online services and bulletin board networks by Steve Coletti and Dale Cary.

Copyright owner is Newsline. Permission to reuse all or part of either this written or the audio form requires that the item be taken in it's entirety, not be subject to any further editing or commentary, and that full credit given to Newsline as the source.

Permission is granted to all amateurs who want to transmit the audio version in it's entirety over nets or repeaters. The text version may be used for packet distribution as long as it is sent in its entirety and the BIN header is kept intact.

NOTICE: When Newsline is transmitted in it's full form over voice or digital forms of Amateur Radio, it is recommended that the closed circut advisory be deleted. Audio, Computer, and Packet retransmissions must be made without the editing or deleting of any other part of the Newsline content. Unauthorized additional commentary to the original message is also prohibited. To do so is a violation of copyright and subjects the initiator to legal action by Newsline.

Newsline may also be excerpted for code practice transmissions just like any other news item from any other permissable/public source.

Any other use is not allowed without the expressed permission of Newsline.

Editorial comment, news items and all other business should be directed to
Bill Pasternak, WA6ITF, Newsline's Producer and Editor-In-Chief.

Ham radio is there as the grim search continues at an Indiana plane crash site, the Dayton Hamvention announces a date change for 1996 and its number 900 for Newsline. All this and more on Newsline report number 900 coming your way right now!

(*****
AMERICAN EAGLE CRASH

Amateur radio was called upon to help in the aftermath of the October 31st American Eagle plane crash. The twin-engine French built turboprop slammed into a northwest Indiana soybean field, killing all 68 passengers and crew.
The devastation of Flight 4184's crash makes recovery a wide spread an tedious operation. With scores of investigators and relief workers on site, the need for communications was critical. The Salvation Army was among several agencies sending crews to the crash area. Pat Mc Pherson, WW9E, is the Salvation Army's local disaster service director. He says hams manned key relief stations through out the area.
"What we have hear, in the Salvation Army actually, are number of vehicles, including five disaster canteens. One is a staging canteen, area canteen, where we bring in our people and our supplies initially and then disperse them to the areas. We have two canteens on the crash site. One serves all of the responding personnel, the other is actually on the recovery area with recovery teams. We have also a canteen at the emergency or temporary morgue. We have our Salvation Army counselors and canteen people there. We also have a canteen at a counseling site near the emergency morgue. So what we found out, at least from my point of view, is I needed communications between all of these different entities and my people in Chicago." Pat Mc Pherson, WW9E.
Mc Pherson is part of SATERN, the Salvation Army Team Emergency Radio Net. SATERN members were called into action shortly after the crash.
"The disaster area that we were serving extended to about 100 miles, at least the range we needed to communicate from Chicago to Remington, IN were a temporary morgue was setup and was actually the command center for the entire operation there." WW9E.
Amateur radio frequencies on 2 meters and HF were active around the clock with disaster related traffic. Mc Pherson says hams have an important role in crash relief efforts.
"It affects our efficiency. It affects the number of necessary errors of going back and forth. Because if you didn't have communications you would just have to make a number of trips that you wouldn't have to. You can understand when I am 50 to 60 miles away from the scene to be able to make a decision right there when I have no other means of communications and to help out in the situation, there's a dynamic you really can't formulate very easily just way beyond what you can normally do." WW9E.
Amateurs from several clubs provided communications assistance. Hams also responded from Illinois. Amateur radio is credited with once again providing a vital service in the wake of tragedy.
The use of amateur radio during the American Eagle crash is another example of how valuable hams can be during disasters.
Peggy Coulter, W9JUJ, is the ARRL's Indiana Section Manager.

She praised what hams at the crash site did.
"I think it's wonderful, I think it's great to link the different places together." Peggy Coulter, W9JUJ.
One other note on the role hams played in the crash aftermath. Disaster officials found that hams can sometimes do what cellular telephones cannot. Cellular coverage is marginal in some parts of the crash site area making amateur radio all the more valuable.

(*****
FREE FEMA TRAINING FOR HAMS

Still with emergency preparedness, the Federal Emergency Management Agency, FEMA says that it has available at no cost, several home study courses on disaster preparedness response. According to a posting by KD6RXY these courses can be converted to college credit if desired. Courses of interest for RACES and ARES emergency communicators are Emergency USA, Hazardous Materials Orientation and a Citizens Guide to Disaster Assistance. Emergency Coordinators and other leadership personnel may also find the course Emergency Program Manager of interest. For further information please write to FEMA-EMI Home Study Program, 16825 South Seton Ave, Emmitsburg, Maryland 21727.

(*****
HAMVENTION DATE CHANGE

After four decades of fighting the uncertainty of weather conditions in Ohio in late April, ham radio's greatest show on earth is changing its date effective in 1996. That's when the Dayton Hamvention will abandon its traditional last weekend in April for a much warmer and less rain vulnerable mid May date. Ken Allen, KB8KE is chairman of Hamvention '95.
"We had received comments over the years, increasingly of late from attendees and people in the flea market, some of the other exhibitors that they really would like to see us move later in the year. Also the HARA Arena people were interested in seeing us move it later in the year because of possible conflicts with their hockey team that is based there." Ken Allen, KB8KE.
Starting in 1996, that's a year and a half from now, the Hamvention will be held the third weekend in May. Hamvention '96 will take place the weekend of May 17, 18 and 19. The 1997 Hamvention will take place May 16, 17 and 18 and 1998 will be May 15, 16 and 17.
Why no change for 1995? Many of the regular exhibitors at the Hamvention work up their convention schedules one, two or even three years in advance. Giving them only six months notice would not be fair to them. Therefore no change is planned for the 1995 Hamvention. It's still slated for the weekend of April 28, 29 and 30 at the HARA Arena in Dayton.

DARA SCHOLARSHIPS

The Dayton Amateur Radio Association is also accepting applications for its annual scholarship awards program. DARA Scholarships are open to all FCC licensed radio amateurs who will graduate from high school in 1995. The club offers eight scholarship awards valued at $2000 each. For more information and an application form please write to the Dayton Amateur Radio Association Scholarship Committee, 45 Cinnamon Court, Springboro Ohio 45006.

(*****
W1AW FAVORS THE SOUTHEAST

ARRL headquarters station W1AW has reoriented its beam antenna system on 20, 15 and 10 meters to provide improved coverage in the south-eastern United States, The league says that its main 120 foot high tower now has its upper bay of antennas pointed west with the lower bay fed in phase and pointed toward the south. The reorientation work was performed by W1AW station manager WA1MBK and station operator WB9RRU and the ARRL wants to know how the W1AW signal is now coming in.

(*****
FCC EMPLOYEES JOINING INFOPIKE

The FCC which is leading the way to the Information Superhighway has also joined it. This as of October 3rd when complete issues of the independent newsletter "Communications Daily" began to be distributed electronically each business day to all 1,844 FCC employees.
Under an agreement announced by FCC Chairman Reed E. Hundt, all employees will access the Daily via the Commission's internal network or will obtain printed copies after the publication is downloaded to a printer. The journal will go to all field offices as well as distribution in its Washington headquarters, but only FCC employees will be allowed to access to it.

(*****
NEW UK AGE LIMIT

The Radio Society of Great Britain reports that the United Kingdom has lowered the minimum age for obtaining a full Amateur Radio license from 14 to 10. The new age limit brings with it a provision that the young applicant must have held a U.K. Novice Class A or Class B ticket for at least one year and then pass an examination for a Full Class A or Class B ticket.

TAPR MEETING

The 1995 Annual Meeting of the Tucson Amateur Packet Radio group takes place March 3rd, 4th, & 5th, in St. Louis, MO. Hosted by the Missouri Amateur Packet Society some of the brightest and most enthusiastic of today's packet developers and users will be on hand for the session.

Tucson Amateur Packet Radio is a non-profit research and development corporation working on the advancement of digital communications and education. This year's annual meeting will be the first held outside of Arizona. As such, it presents a unique opportunity for those unable to travel to Tucson to attend such gatherings.
For full details on registration contact Tucson Amateur Packet Radio, 8987-309 East Tanque Verde Road #337, Tucson, Arizona 85749 or by Internet Electronic mail to TAPR@TAPR.ORG.

(*****
DX-HS QSL

In DX word that the QSL Manager for the Radio Amateur Society of Thailand, HS1HSJ, has had a number of personal problems resigned. That duty has been taken over by Dallas Carter, K3WUW. HS1ASN will serve as his assistant. This means that QSL requests for E22DX, E28DX, and HS8AS should now be directed to the Society address, at GPO Box 2008, Bangkok 10501, Thailand.

WEST RECOVERING

Famed ham radio instructor Gordon West WB6NOA is recovering from eye surgery following a surfing accident off of Newport Beach, California where he had suffered a detached retina.
It was not until Halloween weekend, a few days after the accident that Gordo became aware of the problem. He was teaching his regular No Code Tech and a General code class in Irvine, California. On the third and final day affected eye went out on him. Gordo, being the trooper he is, continued to teach despite the problem. He then checked into St. Joseph's Hospital in Orange for corrective surgery.
We spoke to Gordo on the phone. He is now home recuperating and hopes to be back in the swing of things within two to three weeks. In the meantime, get well wishes can be sent to Gordo at his home address of 2414 College Drive, Costa Mesa, California 92626.

NEWSLINE 900

And finally, it was a mere 900 weeks ago when Jim Hendershot WA6VQP first said.

"The following is a QST. This is WestLink." Jim Hendershot, WA6VQP.

The date was September 27th 1977. The big story that week and that year was a decision by the FCC to deregulate repeaters. Quite literally to make the ownership of relay communications devices available to every ham. And it was repeater deregulation that was directly responsible for the creation of the Westlink

Radio Network. The organization that would later become known as Newsline.

"The FCC dropped its deregulation bombshell last week. Bob Thornberg, WB6JPI reads the details from the ARRL Directors letter." WA6VQP.

"This is Directors letter number 1697 of the American Radio Relay League dated September 22nd, 1977.
The FCC on September 21st, 1977 at a meeting, acted on docket 21033." Bob Thornberg, WB6JPI.

None of those who started the Westlink Radio Network could be called professional news people. At least not back then. In fact, it wasn't until late 1979 when Alan Kaul, W6RCL joined the team that a sense of professionalism took hold and the service took on a definite direction. Alan, who is now a network producer for NBC news recalls those early days.

"The early days of the WestLink Radio Network were pretty exciting times because they were unpredictable. Nothing was really scripted. There were no rules. There was no format to follow. We just sort of did whatever came into Bill's mind every week. Ad libed alot.
I remembered that I was interested in some stuff. I was able to travel to some far and distant places like Bangkok on a story about boat people.
To Teheran on a story about the American hostages in 1979. We found that we could get some stuff into the newscast that was really interesting that people wouldn't find out about anywhere else.
The World Amateur Radio Conference had been meeting and it was covered extensively in Bangkok, of all places. There were reports on the BBC and we were able to get stuff, information long before it ever appeared in print in any other American publication.
In Teheran, during those early days of the American hostage crisis. In the first month or two, I meet a ham that had been living in Teheran. And was operating clandestinely, and sort of explained what was going on. The kind of fears that radio amateurs had. The fact that it was impossible to bring a radio into the country with a BFO. So that you could receive morse code, unless you had special permission from the government.
So it was quite an interesting sort of travel log. Those were some of the things we were able to pass on to our listeners." Alan Kaul, K6RCL.

Today the Westlink Radio Network is known as Newsline. It has a dozen automated outgoing telephones in key cities throughout the United States. Most sponsored by radio clubs and individual amateurs as a service to their local ham radio community. There is also a worldwide volunteer staff of broadcast professionals providing story information and technical support. Each week an

estimated nine thousand hams call in and record the newscast for replay over repeaters and bulletin stations worldwide. How Newsline has grown into such a widely heard ham radio bulletin service will be covered in part two of this special report on the history of Newsline, next week.

[ANARTS - Australian National Amateur Radio Teletype Society]

A.N.A.R.T.S. News Bulletin 835 13th November 1994

AMTOR BBS updates

VK2AGE, Gordon, should be back on air with his BBS on 16th November on his return from his holiday in Europe. Whilst over there, Gordon visited John G0SPO (erstwhile VK2CFJ). John moved to England to be near his family, and you may remember him as one of the ANARTS team of relay officers. John had to change residence in England as he ran foul of a council that would not let him put up a HF antenna of his choice, but is now in an area without that problem.

VK6TN, the W.A. AMTOR BBS, will be off air 28th november to 3rd December while the operator has a rest period.

Presence of VKs in RTTY contests

It is pleasing to see results of VK activity in RTTY contest reported in Amateur Radio magazine, although the reports are from last year's contests. In this stage of the solar cycle, scores are not likely to be all that high, but at least the VKs are being represented.

How about it? Make a New Year's resolution to take part in at least one contest a year -- just to keep the VK flag flying and keep those far distant stations looking for us.

Support RTTY and the later digital modes -- it's all good fun and there are lots of friends to be made out there.

IPS WEEKLY REPORT
---

4 NOVEMBER - 10 NOVEMBER

ISSUE No 45

DATE OF ISSUE: 11 NOVEMBER 1994

INDICES:

DATE 04 05 06 07 08 09 10

10CM 84 83 81 82 80 79 80
A 15 12 27 8 4 12 (13 ESTIMATED)
T 14 -10 71 27 -3 25 33

SOLAR ACTIVITY WAS VERY LOW ALL WEEK.

THE GEOMAGNETIC FIELD AT LEARMONTH (WA) WAS MOSTLY QUIET, OR QUIET TO UNSETTLED. THERE WAS A BRIEF ACTIVE PERIOD ON 6TH, AND ON THE 9TH NOVEMBER THE FIELD WAS UNSETTLED TO ACTIVE THROUGHOUT THE DAY.

IONOSPHERIC F2 CRITICAL FREQUENCIES WERE NEAR PREDICTED NOV-EMBER VALUES ON 4TH AND 8TH-9TH NOVEMBER, AND SLIGHTLY ABOVE ON 10TH. FREQUENCIES WERE DEPRESSED BY UP TO 20 PER CENT DURING LOCAL NIGHT ON 5TH, THEN NEAR NORMAL. ON 6TH AND 7TH FREQUENCIES WERE ENHANCED BY UP TO 50 PER CENT EARLY IN THE UT DAY, BECOMING DEPRESSED BY UP TO 40 PER CENT FROM 1600UT, AND AT OTHER TIMES, NEAR PREDICTED VALUES.

FORECAST (11 - 17 NOVEMBER)

SOLAR: VERY LOW.

GEOMAGNETIC: QUIET.

IONOSPHERIC: ABOUT 10 PER CENT ABOVE PREDICTED NOVEMBER VALUES.

Notes of Interest:

SYRIA - The following is from the Northern California DX Packet Network:

"WA2TMP, K3NA, K6ANP, N6TV, NW6P, W6OAT, W6OTC and W0YK will activate YK0A between November 23 and November 30, 1994. This DXpedition will be the first ever operation by foreigners officially sanctioned by the Syrian Government.....The primary objective of the DXpedition will be to make YK available on CW, RTTY and the low bands. A secondary objective will be to operate as a two or three transmitter multi-multi in the CQ WW CW DX Contest November 26 and 27.

The group foresees some SSB and WARC band operation as time and band conditions permit. QSL via W6OAT."

KAMPUCHEA - The operation by XU3DWC, between August 1993 and December 1993, has been accepted by the ARRL DXCC desk.

For next week's bulletin send your bandpass and notes of interest to Bob, WB2CJL at I5FLN.ITA.EU or at W5KSI.#NOLA.LA.USA.NA

73 es Good Hunting de Jules W2JGR at W5KSI.#NOLA.LA.USA.NA

[via HF AMTOR]

The items in this week's bulletin are courtesy of Kirsti, VK9NL, the HIDXA, Chod, VP2ML, The DX Bulletin, Bob, W5KNE, QRZ DX, the Yankee Clipper Contest Club PacketCluster network and the Contest Corral column in QST. Thanks.

BHUTAN. Despite poor propagation conditions, a successful demonstration of Amateur Radio was carried out for the Deputy Minister of Communications and staff. Jim Smith, VK9NS, reports that A51MOC is now the official call sign of the Ministry of Communications.

PACIFIC TRIP POSTPONED. Masa, JE1DXC, has run into transportation problems. His trip that included stops at 3D2, T2 and T30 has been postponed with no rescheduling date mentioned.

ANTIGUA. Ratko, YU1NR, continues to be active as V29NR. Recent spots show most of his activity being on 17 meters. Try 18115 kHz at 1510 and 1700 to 1730z. Also check 24951 kHz around 1600z. QSL via YU1NR.

CENTRAL KIRIBATI. Ron, ZL1ALO, reports his T31RW trip has been moved back until around April or May 1995.

HAITI. Missionaries HH1D and HH1T are Darlene, KB8CTC, and husband Tim, KB8CTD. They operate between 14260 and 14kHz around 2200z and 7288 kHz at 1000z running a TS-450S from a solar charged battery system.

IRAQ. YI9CW has applied for authorization to operate on 30 meters.

THAILAND. DL2VK will be signing HS0/DL2VK for about 6 months. Most activity will be CW, though packet, AMTor, PacTOR and SSB may be used.

HEARD ISLAND. Tony, WA4JQS, plans ahead. He is working on obtaining permission to visit the island in 1997. Until then he and WA8JOC, WD8SDL and W9OEH continue work on refurbishing 3Y0PI antennas.

UNITED ARAB EMIRATES. Don, WB2DND, should be in Dubai from November 11 to 16 and operate A61AD. Most operations will be early mornings and late evenings with Don having to do so around his work schedule. Check 160 and 80 meters around 0200z. He has a sked with WA2UDV and N1QMM on 14240 kHz at 2100z and takes calls afterwards. QSL via WB2DND.

TONGA. Paul, KK6H, should be on the air as A35RK from November 24 to February 7. Most operating will be CW on 160 through 30 meters. QSL his home CBA w/SASE.

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by packet to the President (Col) VK2CTD, or the Secretary (Pat) VK2JPA at VK2RWI.

News items may be sent to Broadcast Officer PO Box 60 Blacktown 2148 Australia, or by packet to VK2JPA at VK2RWI. Email addresses for the Broadcast Officer are :

patl(at)pitt.conmusic.su.oz.au

The Society welcomes news items on any digital subjects from anywhere in the broadcast coverage area. We are looking forward to news from your areas to let other amateurs know what you are doing in the hobby. Hope to hear from you.

73s de Pat VK2JPA Broadcast Officer
That concludes the broadcast for this morning/evening.

Silent Key

Keith Laws VK2BKL, of Lakemba

It is with deep regret that I announce the passing of my friend Keith Laws Sunday morning 23rd October 1994.

Keith passed away enjoying his new found hobby of flying his ultra light aircraft in the Oberon area, fortunately his flying instructor was with him at the time and was able to take over the controls and land the ultra light plane. Keith and I along with many others shared the common interest and hobby of amateur radio especially on the 6m band, he was a person who put 100% effort into any project he put his mind to and as such was always finding ways to improve his station as well as help others to improve theirs.

After obtaining my AOLCP in 1966 in 1966 I was greatly influenced by Keith in the mysteries of 6m operation.

During his period of operation on 6m. Keith made many thousands of contacts all over the world, his call sign being heard whenever the band opened to ZL or JA or local sporadic E.

There are still fond memories of the 6m fox hunters all with full size 3el 6m beams attached to their vehicles proceeding at a great pace to find the hidden transmitter followed by the get together always attended by Keith and his good wife Val.

Keith was an amateur in the true sense loyal to his hobby and always there to help others. Keith was born in Berlin on 27-5-1930 and lived in England as a young man he then moved to Australia and married Valerie, they had two daughters Kay and Debbie, who married and gave birth to Trent and Mitchell now living in USA, and Debbie's son Shane.

Keith was first licensed on 2-12-1958 as VK2ZVL in the Botany area he then in true amateur style drove around Sydney in his Volkswagen complete with 3el 6m beam looking for the right location with the loudest signals and least noise on 6m to live ; he decided on Lakemba and stayed there till his end.

Keith was a person who enjoyed his family and his hobbies which included Amateur radio, boating, flying, cars, motor bikes.

He will be sadly missed

Norman Deitch VK2ZXC

VK2 Div. President's message

This is Michael Corbin VK2PFQ

Last Friday the 11th November was an open meeting of the Council of the W.I.A. N.S.W. Division. This meeting was well attended, many and various matters were discussed and the gallery was well behaved.

As you know by now, Mrs. Morris is no longer with us. Peter Kloppenberg VK2CPK has been good enough to fill the vacancy on a temporary basis.... for at least the next three weeks anyhow. I wish to publicly thank Peter for his continued support. The hours he spends in the Office are invaluable. For instance, Peter started on Friday at about 10.00a.m.....he left at 1.00a.m. on Saturday morning. What a bloke!

In order to balance the budget this year, Council has decided, for the moment, not to fill the position of Administration Secretary. It is expected that a new secretary will be appointed in the new year. The position will be advertised next month.

The present condition of the filing system leave a lot to be desired and it is to this end that I am requesting anyone with time to spare to come in and give us a few hours free work. The main problem is, is that everything in the files is out of order/mixed up or together/in the wrong place/not stapled and/or fixed together/not cross referenced or not on any data base. I do not seek to level blame on anyone for this state of affairs...All we want to do is .... clean it up.

If we are to run the Institute like a business, as should be the case...then our files need to be organised in a more professional manner. One cannot expect any new office person to operate effectively in the position of Secretary with the Office records being in the state that they are in presently....and knockers please note, nobody is blaming Mrs. Morris for this state of affairs. It's just years of neglect, with lots of well meaning folk each doing their well meaning bit .....nobody in particular is to blame, I think we probably just outgrew ourselves. Anyhow, after all, the place ran for years on voluntary labour. I feel it's now time to adopt a more professional and business like approach. Updating our files is part of this professional approach....so if you have a few hours to spare and wish to delve into the past history of the Institute as well, then come in and give Peter Kloppenberg a hand.

On the correspondence side, by this I mean the unanswered letter department...enormous inroads have been made into a file, which was at least 4 inches thick...to give you an idea. There was a Lever Arch file of the normal size, filled, so full, you were unable to close it. The previous secretary, you will recall, when he resigned, "promised" to come in and liaise with Mrs. Morris and give some indication where he was up to with the correspondence......

to the best of our knowledge, this was NEVER done...Indeed, he claims to have left all relevant information in the office and....you guessed it....it disappeared. One wonders whether he left it in "the usual place"????? In the back room..... on the safe....there is definitely no truth in the rumour that it was stolen by the tooth fairy...Perhaps this time it was the "Scarlet Pumpernickel"....We didn't get his keys back either Hmmmmmmmmmm!!!!!!!! Anyhow once more, I digress.

The reason I brought this matter up was to make you aware of the great job Pixie Chapple VK2KPC is doing answering all that OLD correspondence...Some of it dates back to August 1993!!! The file is now only 1 inch thick and diminishing rapidly. Pixie is answering all letters but she can only answer those which she knows exist. If you have outstanding correspondence which remains unanswered....Having been gobbled up by whatever sort of Monster lurks behind the safe in the back room....Then, please bring it to the attention of our efficient Secretary. Council guarantees answers...what we don't guarantee is that we will give you the answer you want!!!

As today's Broadcast is rather long...more on the happenings at the Meeting next week. Now on with the final instalment of the IARU Region 3 Singapore Conference Courtesy David 9VIRH/VK3QV...AND I quote...

"Working Group "A" considered operational requirements for the satellite service and recommended that member societies endorse the phase 3-D project and find ways and means to collect private and other donations to support it.

The IARU Region 3 Awards Manager submitted his report and was amazed to find out that the majority of delegates in the working group had never heard of it. Anyway, a total of 1900 awards have been issued, 400 of these in the last two years. Details can be found in the latest NZART Call Book.

And now, the Morse Code, a topic briefly touched upon a few weeks ago....the working group and, ultimately the Conference, endorsed the continuation of the requirement in the ITU Regulations for competency in Morse Code by hand.

I P H A came next....now what is I P H A...it is an international organisation to assist handicapped people to obtain their amateur radio licence. It is located in Region 1, although in the USA the Handy Ham organisation operates along similar lines. Member societies are requested to inform the Region 3 secretariat and the IPHA Region 1 Co-ordinator of facilities available in their country for the support of disabled radio amateurs.

Commonly accepted Amateur Licences...again briefly touched upon earlier but nevertheless, a repeat of the recommendation... that

Region 3 societies obtain simplified reciprocal operating and licensing procedures by an international amateur radio permit and by TR61-02 and recognition of existing, informal, agreements.

The emergency communications aspect of amateur radio created considerable interest, specially paper no 35, presented by the WIA in which WICEN was mentioned as an amateur representation with emergency authorities. Interesting to note that in Thailand the amateurs were finally allowed to operate on HF outside Bangkok after they organised an emergency network during a severe typhoon some years ago, while Malaysia came with the story that, after the control tower of an important airport was burnt out, amateurs provided initial around the clock air communications until the tower was partially restored.

The Region 3 News Letter, which is published twice a year, was discussed and it was decided that the editor should establish a roster system of member societies to supply copy for publication. Unfortunately, this publication is hardly known in Australia. According to the rules, established at a Directors meeting in Bandung in 1990, copies can only be sent to a societies head office for distribution to interested parties. It is unknown how many copies the WIA receives at Head Office, one thing is for sure, your Queensland Council members haven't seen a copy for many years.

ARDF was also discussed and, as you are aware, Townsville will host the Second Region 3 ARDF Championships, sometime in 1996 or 1997, depending on the outcome of talks Wally, VK4DO will have with Region 1 officials so that there will be no clashes in dates.

Of importance is, that the Rules for the Region 3 ARDF Championships and the Appointment of IARU Region 3 International Class Referees is approved. Further, that the first IARU Region 3 International Referees, qualified at the 3rd meeting of the ARDF Committee, are also approved.

This means that Wally's appointment as International Region 3 referee is now a reality. Still on ARDF, a problem exists with Mongolia. Being a former member of the USSR, Mongolia is in fact a member of Region 1 but, for the Mongolian Radio Sports Federation to become a member of Region 3, many hurdles will have to be overcome, not the least the ITU. The Conference adopted a proposal that the MRSF be treated as if it were a member of Region 3 for participation in ARDF activities and for PARDC......Now...What does PARDC stand for....it stands for Promotion of Amateur Radio in Developing Countries. As a result of a proposal from New Zealand the name is now changed into STARS 3, Support of the Amateur Radio Service in Region 3, describing all the promotional and support activities necessary in all the countries and societies in the Region, regardless of their state of development. Of vital importance is the acceptance of Amateur Radio by a country's administration and that's where a lot of education is necessary.

The subgroup recommended the inclusion of youth and women in the growth of amateur radio. Further, that organisations like the Asia Pacific Tele-community be encouraged to hold future seminars on amateur radio with as wide participation from member societies as possible. The STARS-3 Task Force encourages assistance in negotiations with local administrations by supporting local amateurs, providing prototype documents, papers and regulations, prototype syllabus and examination material and provide explanatory material about amateur radio. Region 3 secretariat is encouraged to urge member societies to inform them of all positive news events relating to amateur radio, such as disaster assistance, rescue, medical emergencies etc, so that all administrations are aware of what radio amateurs can give to their country.

Papers on deregulation, self regulation and amateur radio examinations were accepted as information only.

My impressions of the Conference....well organised by the Singapore Amateur Radio Transmitting Society....fantastic company...good and frank discussions and definitely illustrating the need to know at least one or two other languages besides English. I found that by being able to converse in one way or the other in Indonesian, for instance, I gained more knowledge about Amateur Radio in that country than others who did not speak the language...Nevertheless, I think that future conferences will be much busier, probably equating those of Region 1, where sessions often go into the wee small hours, just to have certain propositions finalised....."

....and so end the final part of what was a most informative account of one persons views of the IARU Region Conference in Singapore. There is another account in the latest edition of AR on pages 4 to 9 inclusive. This was written by Kevin Olds VK1OK who lead the Australian Delegation

See you next week.

Federal news

VK Ham Visits Russian Space City

Steve Curtis VK3CAW, from Hamilton in Western Victoria, spent eight days in late September visiting Star City (Zvyezdny Gorodok) in Russia where the MIR space station and launch vehicles are made and where MIR astronauts are trained.

"Only a handful of Westerners have ever seen the facilities and factories there," said Steve, who is a school teacher at Hamilton College, "It's still a closed area, one of the few remaining in Russia these days." It was an undreamt-of experience for Steve, and it arose from a chance encounter last June when he was one of the Australian educators selected to attend the Australian International Space School, held in Sydney that month. The Space School is concerned with introducing space technology to students, and looking at ways it can be incorporated into maths and physics

lessons.

In 1992 Steve had used amateur radio with his Year 11 maths students to make contact with the MIR orbiting space station as a classroom activity to demonstrate in a practical way the mathematics of satellites. In 1993 he again used amateur radio contact with MIR to introduce concepts of gravity and satellite orbital physics to his Year 12 physics students. Steve's students were able to speak to MIR astronaut and amateur, Anatoly Solovyev U6MIR.

Subsequently, Steve's curriculum material and innovative teaching strategy was published for other teachers to use.

Attending the International Space School was the Vice Rector of the Siberian Aerospace Academy, Victor Filatov, who was so enthusiastic about Steve's work he arranged for his trip to Star City, 45 km north east of Moscow.

As it turned out, Steve was the only ham among the seven other people from various countries who toured the MIR facilities. All had deep involvement with the Russian space program, said Steve. Despite it being military-run and closed to the general population, Steve was permitted to take any photographs he wished.

He spent an evening with Anatoly U6MIR, with whom he'd had his first MIR-school linkup back in 1992. During a tour of the MIR training facilities, where there's a full-size working mock-uo of the space station, Steve asked where the 2 m and 70 cm amateur antennas were located on the real spacecraft. The technicians there admitted they didn't know, but Anatoly U6MIR ventured that they had used magnetic-based antennas. True ham ingenuity -- in space!

As a result of his Star City trip, Steve has been asked to inaugurate a summer space school which would take 20 high school students to Star City each year, where they would work with Russian scientists and get hands-on experience with space science and technology. "It's a unique idea; nothing like this is offered by the US space program," he said.

The plan is to organise the first trip to Russia next August and Steve is seeking funding sources to support it. Meanwhile, he's still promoting the use of MIR and amateur radio in high school science and maths courses.

WICEN News

A summary of the recent Bathurst Co-ordinators Conference will appear on next week's Broadcast. In the meantime, we have been informed that JOTA next year will be on 21st-22nd October, so again there will be no conflict with the Hawkesbury Classic Paddle.

This is supposed to be a quiet time for WICEN, but in the past we have had fire, flood, tempest, and earthquake around this time of the year; about all that is left is famine (unfortunately, we may already have this in the form of the drought) and plague (hopefully WICEN will not be involved in that one!), so do not be complacent; keep your equipment ready at all times for a sudden activation.

Events this month include the Hunter meeting on the 21st November, and the closing date for the Newsletter on 30th November.

For next month, WICEN has been requested to assist with the NSW Water Ski Association Ski Racing Division "Lion Island Classic", on Sunday 11th December 1994. Long distance communications are required from Croppy Point to Laughtondale, and this will probably involve 80m. Three stations are needed, from 0900 to 1430, and those interested are invited to contact David Ramsay VK2KLX.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains on the first Monday of each month at 8.30pm on channel 7175 simplex, Hunter each Wednesday at 7.30pm on channel 6900, Northern Rivers each Wednesday at 8pm around 3610 kHz, Central Coast each Thursday at 8.30pm on channel 7125, and Sydney each Thursday at 9.30pm on channels 7150/8275. If there are any other regular nets then we'd like to hear about them.

-- Dave VK2KFU, WICEN (NSW) Inc. Publicity Officer

Dural Report

Here again is another report on activities at the Dural broadcast station.

We apologise for the somewhat-curtailed Broadcast last Sunday evening, but because of a general power failure we were literally operating under torch-light, and many facilities were not operational; we would like to thank the various relay stations who stepped in for us, notably Peter VK2XZP (and others whose names are lost to us), and the Announcer, Peter VK2EMU, for whom the task of reading the text was not easy. This particular matter was not lost upon the newly-formed Dural Committee, many of whom assisted in this "Broadcast under Torchlight"; plans for making the Dural facility independent of the power grid are already in motion.

Possibly as a result of the various power outages that occured as a result of unusually high winds, the power supply for the Dural beacon controller VK2RSY decided to take a holiday; by now all beacons should be operational.

Finally, the 10m SSB amplifier has failed, so we are back to running "barefoot" on 28.320 MHz, which being a converted CB set

was not all that hot to start with, but nobody seemed to have noticed! This amplifier will be returned to service when a new "final" has been obtained.

-- Dave VK2KFU, Dural Engineer

Magazine Roundup

Here again is a summary of the local magazines, which in the author's opinion could be of interest to Amateurs. This week we discuss the November issues of the various magazines.

"Electronics Australia" discusses whether alleged out-of-band operations could merely be "images"; concludes their experiments with stepper motors; builds a simple cable checker; concludes a series on proportional radio control; turns an "XT boat-anchor" into a cheap programmable logic controller; and commences an intelligent solar battery charger.

"Silicon Chip" builds a dry-cell battery rejuvenator; Novices may be interested in a simple DSB (Double Sideband) transceiver; modifies a Nicad discharger for 2-cell packs; and shows how to produce PCB patterns on an X-Y plotter.

"Amateur Radio" summarises the recent IARU Singapore conference; discusses NVIS (Near Vertical Incidence Skywave) antennas; the SMA introduces their new policy on interference; over-voltage protection from field generators receive another mention; a new publication from the RSGB, "The Radio Amateur's Guide to EMC", is reviewed; the redoubtable FM-828 is tuned up, complete with a simple S-Meter; and first-comers to Packet Radio can read how to connect a TNC to a computer and transceiver.

"Amateur Radio Action" reviews a long-forgotten antenna -- the "Carolina Windom"; the Internet and its resources are discussed, along with vertical antennas; a series on Weather Satellites is continued; and a novel antenna-matcher, seemingly too good to be true, is discussed, although another magazine not unconnected with Amateur Radio described what appears to be its principle of operation not so long ago ...

Finally, "CB Action" describes an interesting use of the "near field effect" in a scanner; and provides an index of INternet addresses for Short Wave stations.

Be listening next month for another summary of the local magazines.

-- Dave VK2KFU

News briefs

ABC-Digital, information technology branch of the Australian Broadcasting Corporation, has launched its new "D-Radio" computer-

based radio broadcasting system. The system includes the now-familiar "D-CART" digital audio storage and editing system, digital signal processing hardware, and computer-controlled signal routing,

The "D-Radio" operator's console features a touch-sensitive screen, and performs messaging, audio track selection, and program scheduling. It even has a "virtual console" with an on-screen mixing and fading controls. The heart of the "D-Radio" controller is a Motorola 68040 microprocessor, running the OS9 operating system and 200,000 lines of assembly language code written by the ABC.

The system is to be manufactured by AWA at Lane Cove in Sydney, and will be available for delivery early next year.

* * *

It was reported this week that the Space Shuttle "Atlantis" lost contact with NASA flight controllers last Sunday. The communications breakdown, which lasted for about eight minutes, was attributed to (quote) "crossed radio signals", whatever that means. Hopefully no SAREX (Shuttle Amateur Radio Experiment) equipment was implicated!

* * *

The Sydney Morning Herald's television guide last week featured the so-called "other channel", Sydney's community television channel, which broadcasts from Artarmon on channel 31. Have any Amateurs into ATV told them about the other "other channel"? The article mentions that anyone with an idea for a program community television can contact the Station's programmers on (02) 649-9622. Your program could reach up to 200,000 viewers each week.

* * *

An article in the Seattle Times of 5 November reported that (quote) "Microwave interference has stalled crane operations on the $74 million Seattle Center Coliseum renovation project." Broadcast towers on nearby Queen Anne Hill and consumer microwave ovens (!) on the same hill are suspected, but "I don't know if we'll ever be able to pin that down," said Jack Donovan, construction manager for PCL Construction Services Inc."

Continuing from the article:

... when the crane operator tried the [crane's] electronic controls, they didn't respond correctly and haven't worked since, Donovan said. He didn't think the problem would delay the project ... "Obviously, it's an inconvenience, but to this point we've been able to use alternate means to work around it, " he said.

The crane operators are testing filters or shields aroubd the controls to ward off microwaves. Electronic specialists were called in to work on the problem yesterday.

-- Steve Sumjmit on the Internet "comp.risks" forum

(One has to wonder how much blame will be cast on those poor microwave ovens... if the cranes were so badly affected, one might expect some rather dramatic effects on humans living in the area as well!).

* * *

"News Briefs" looks at communications news items that appear in the mainstream media. Thabks this week go to "The Australian" and "The Sydney Morning Herald", and the Internet "comp.risks" forum. If your local or regional paper runs an item of interest to Radio Amateurs, why not send a clipping to the Divisional Office?

Secrets of the sun

The AUSTRALIA NEW ZEALAND SOLAR ENERGY SOCIETY is hosting the "Solar '94" Solar Energy Conference, fro, 30 November through 3 December.

The theme of the conference will be issues of environment, population, sustainability, survival, and renewable energy. The conference will feature a trade exhibition and technology expo which will be open to the public.

A number of workshops will address;

* Advanced Materials

* Passive Solar and Integrated Building Design

* Photovoltaics

* Solar Thermal and Energy Storage Applications, and

* Solar Energy Economics

On Tuesday, 29 November, pre-conference tours will be conducted to:

* Photovoltaic and Solar Units at the University of New South Wales

* the SOLARCH Photovoltaics and Devices Centre and Solar Thermal Research Groups at Little Bay

* Malabar wind Turbine site

Finally, on the conference's Public Day on 3 December, internationally famous environmentalists Paul Ehrlich and Dr. Davi Suzuki will speak on various issues of renewable energy and other environmental issues.

The "Secrets of the Sun" solar enrgy conference takes place in the Clancy Auditorium of the University of New South Wales, Sydney. For more information about the conference, listeners may contact the conference organisers by phone on (02) 385-4868, or (02) 385-4333.

Thanks to Brad McMaster VK2KQH, who supplied us with details of the conference.

HAM LOG a hit overseas

Local Amateur Robin Gandevia VK2VN, who in the past has shown us how (and when) to make visual contact with satellites, has sent us a clipping from The Canadian Amateur Radio Magazine. They've been reviewing version 2.5 of his HAM LOG station logging program, and they seem to be quite taken by it.

The program has all the usual logbook features one would expect, but (amongst other things) it also:

* prints QSL labels

* provides country details for the station being worked, including handy phrases so you can talk to the other station in his/her language

* has a built-in notepad for recording tuner settings and other details

* has bandplan details, beacon information, Q codes, CW abbreviations, and temperature conversion tables, all available at the press of a button.

A demonstration version of the program can be downloaded from many computer bulletins, and Robin tells us that version 3.0 will soon be available.

Intruders

The ABC TV programme 'Foreign Correspondent' screened Tuesday 8th November 1994 ran an item about Cambodia and the hostages. Footage showed government forces in the rebel areas and one scene of the front line communications.

The scene showed army personnel using HF communications, most likely back to headquarters, in both voice on sideband and CW.

What was significant however was that the equipment was an Amateur band transceiver - an ICOM IC 75A with a displayed frequency of 7088.8 KHz, which is within OUR exclusive international 40 metre bnd. The close-up of the transceiver showed the frequency - 7088.8 - had been programmed into memory 22 and it was in the lower sideband mode.

Unless there has been recent amendments or alternate use registered with the ITU, the use of this portion of the spectrum

would appear to be an intruder.

The ITU frequency table - Asutralian Table of Frequency Allocation October 82 - shows 7000-7100 kHz Exclusive Amateur and Amateur Satellite with footnote 510 for use in natural disasters, and footnote 526 of additional allocation and 527 alternative allocation for use of the "fixed service' in certain North African and Middle East countries. There is no reference that the portion 7050-7100 is other than EXCLUSIVE Amateur.

If one studies television and press footage closely one will observe the apparent high usage of Amateur based equipment throughout the world - in service other than in the Amateur Radio Service - it no doubt keeps us supplied but at what cost? ...

supplied by Tim Mills VK2ZTM

IPS WEEKLY REPORT
---

4 NOVEMBER - 10 NOVEMBER

ISSUE No 45

DATE OF ISSUE: 11 NOVEMBER 1994

INDICES:
DATE 04 05 06 07 08 09 10
10CM 84 83 81 82 80 79 80
A 15 12 27 8 4 12 (13 ESTIMATED)

SOLAR ACTIVITY WAS VERY LOW ALL WEEK.

THE GEOMAGNETIC FIELD AT LEARMONTH (WA) WAS MOSTLY QUIET, OR QUIET TO UNSETTLED. THERE WAS A BRIEF ACTIVE PERIOD ON 6TH, AND ON THE 9TH NOVEMBER THE FIELD WAS UNSETTLED TO ACTIVE THROUGHOUT THE DAY.

IONOSPHERIC F2 CRITICAL FREQUENCIES WERE NEAR PREDICTED NOV-EMBER VALUES ON 4TH AND 8TH-9TH NOVEMBER, AND SLIGHTLY ABOVE ON 10TH. FREQUENCIES WERE DEPRESSED BY UP TO 20 PER CENT DURING LOCAL NIGHT ON 5TH, THEN NEAR NORMAL. ON 6TH AND 7TH FREQUENCIES WERE ENHANCED BY UP TO 50 PER CENT EARLY IN THE UT DAY, BECOMING DEPRESSED BY UP TO 40 PER CENT FROM 1600UT, AND AT OTHER TIMES, NEAR PREDICTED VALUES.

FORECAST (11 - 17 NOVEMBER)

SOLAR: VERY LOW.

GEOMAGNETIC: QUIET.

IONOSPHERIC: ABOUT 10 PER CENT ABOVE PREDICTED NOVEMBER VALUES.

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

CLUB NEWS

Radio Veterans Group

Next Thursday 17th November the Radio Veterans Group will be holding their usual monthly get-together. This get-together will be their last one for this year, so George, VK2BGU, has advised the office that this will be the Christmas Party meeting. Anyone with nothing to do next Thursday is invited to attend. You are requested to bring a plate.

Franklin, VK2DYP, has requested that anyone intending to come should contact him on 452 5172. It is important that you bring a plate so that the day will be a complete success.

So -- next Thursday -- Christmas get-together.

Where ?? Amateur Radio House.

Time?? 11 am and it finishes at 2 pm.

See you there

Blue Mountains Amateur Radio Club Inc.

Only two weeks to go to the Blue Mountains Computer and Communications Show Springwood High School, Grose Road Faulcon-bridge on Saturday 26 November 1994.

* Exhibitor/Retailer stands
* Flea Market
* Refreshments (Sausage sizzle and hot/cold drinks)
* Colour TV guessing competition
* Demonstrations HF, VHF, ATV
* W.I.A. Bookstall

Have you got something to sell - computer or radio - then why not take a stall in our Flea Market. Space is likely to be quickly taken up so act quickly. To reserve space contact Alex VK2KAS Publicity Officer on (047) 57 3256.

Hope to see you there - by the way - admission for visitors is free so why not come and browse around.

Alex VK2KAS
B.M.A.R.C.Publicity Officer

INVITATION

The Wireless Institute of Australia in conjunction with WAHRA, AAPRA, SPARC and other groups is pleased to announce that there will be a social function and get-together at the home QTH of Jo, VK2KAA, on Sunday 4 December 1994.

All Amateur Radio Operators are welcome to attend the barbeque which will commence at 5.00 pm.

The QTH is 59 Westbrook Avenue, Wahroonga.

The function will cost $10 per head and in the interests of catering, would you please contact Jo at the above address by Sunday 27th of November to indicate your intention to attend. Pre-payment for the function would be appreiated. Spouses and friends are very welcome. A pool is available so bring your "Cossie". Please bring your own drinks.

Jo's telephone number is 489 4393. She can also be contacted on Packet via VK2AAB or on the Hornsby repeater, on 147.250 MHz.

We are looking forward to seeing you there to celebrate the passing of a turbulent but interesting year.

From the VHF to SHF DX Interest Group

A number of people have asked what's behind the group:

So here it is: The aim of the group is to foster long distance communication in the VHF, UHF and SHF spectrum. The group gives talks, presentations on techniques, and ideas to be used to further the ideal of Amateur Radio in the area of long haul communication in the VHF abd above frequency range. The pool of talents that the group can, and has drawn on, are very keen to pass on their knowledge to assist in this pursuit.

NOTE

The Group's net has a new starting time of 11:00 Australian Eastern Daylight Saving Time (AEDST) i.e. after the end of the morning broadcast. The net is held on 146.5 MHz FM.

The SSB activity night on 2 metres is held every Tuesday evening 20:00 to whatever. This is well patronised and new stations are giving those repeaters a miss and joining in the fun.

A SSB activity night on 70cms is held every Thursday evening 20:00 to 21:00 AEDST. This band needs better patronising (you know the saying use it or lose it!) and if you have 70 cms capability we would certainly like to see you there.

The group's talk night on 22nd November 1994 will begin at 21:30 ADEST and be held at the WIA premises at Parramatta. We will be discussing the construction and what is required to build a two metre low noise preamplifier. (What device to use, techniques, selection of ccts, etc.)

Richard Soulie VK2ARS Publicity Co-ordinator

Club news: Central Coast

The Central Coast Amateur Radio Club ATV Group will be holding a Video Production Workshop on Saturday 19th November at the Club Rooms. The aim of the Workshop will be to produce a programme of interesting newsand information which will be included in one of the regular Gladesville ATV Group broadcasts which are transmitted to air in Sydney an the Central Coast.

Anyone interested in participating first hand in a video production and learning the fundamentals of lighting, audio and video production techniques is welcome to attend.

The workshop will be held on Saturday 19th November, commencing t 2.00 p.m. at the CCARC Club Rooms, Dandaloo Street, Kariong.

-- Bob Fitzgerald, VLK2XRF
CCARC Publicity Officer

AATC

The next general meeting of the Australian Amateur Television Club Inc. is on the 2nd Sunday of the month at 11.00 am at Black Muscat Park - Chipping Norton - today - now !!! now !!! now !!! - dress casual. This meeting is for AATC members and families only.

The technical lecture on the day will be a demonstration of a new 8 channel audio callsign generator -- excellent for calling 8 of your fellow VK mates on radio/tv - an auto cue will follow in month or 2. Also in the number 8 ideas an 8 + 3 channel relay interface off your IBM will be shown minus the 240v - applications are endless. These new projects and more will be at the Wyong Field Day 1995.

A CAD - PCB drawing assistance information day will be conducted one Sunday early in 1995 for any amateur wishing to know how to layout artworks for PCBs that can be used for their own club projects. Please contact Bob Barnes on (02) 587-3491 during business hours.

For more information about the A.A.T.C. listen to the net on Tuesday nights from the Liverpool area on 146.625 MHz - approx 19.30 hrs - or watch us on 1250 MHz from our Oakdale repeater anytime. Also you can ring the Publicity Officer on (02) 587-3491 bus. hours.

AATC Inc. Publicity Officer Bob Barnes VJ2R

Waverley Amateur Radio Society

The next monthly meeting of the Waverley Amateur Radio Society will be held on Wednesday, 16th November beginning at 7.00 pm at the club's new premises at

Rose Bay Scout Hall
Vickery Avenue
Rose Bay

The main purpose of the meeting will be to help construct and test the Society's packet modem kits, so bring along your kit together with all components and a soldering iron. Experienced advice and testing gear will be available which should enable your modem to be up and running by the end of the evening. There are still a few kits available at a very reasonable price.

Don't forget that the meeting will be at our new premises at :
Rose Bay Scout Hall, Vickery Avenue.

Simon Buxton - VK2EII - Publicity Officer

Club news: Liverpool

The Liverpool and District Amateur Radio Club is holding its Mobile Foxhunt and BarBQ on November 27th commencing at 10am. The starting point is the carpark of the Liverpool Swimming Centre.

We would like an indication of numbers interested in attending, so will you please call Paul VK2UPB or Brad VK2QQ on the Liverpool repeater which on 146.625 MHz.

--submitted by Brad VK2QQ

Club News: Manly Warringah

The Manly-Warringah Radio Society's next lecture night is this coming Wednesday, the 16th of November. Phil VK2BDF will tell us everything we ever wanted to know about Operational Amplifiers but were afraid to ask. The doors open at 7:30pm for an 8pm start. The Society's club rooms are located at the Warringah Volunteer Services Centre, Kamber Road, Terrey Hills. Meetings are held every Wednesday night, with business meetings on the second Wednesday, and lectures on the third Wednesday of each month, and visitors are always welcome.

Once again, this month's lecture on op-amps is on this Wednesday evening at 8pm, at the Warringah Volunteer Services Centre, Kamber Road, Terrey Hills. Give a call on the club's 2m repeater on 146.875 MHz if you need directions. Hope to see you there!

-- Richard VK2SKY, Manly Warringah Radio Society Publicity Officer

Coming events

Now, a summary of upcoming events of interest to members and other Radio Amateurs ...

Australian Amateur TV club meeting. . . . . Today
Manly-Warringah lecture night . . . . . Wednesday
Waverley Amateur Radio Society meeting. . . . . Wednesday
Veterans Amateur Radio Group Christmas party+meeting. .Thursday
Central Coast ARC Video Production Workshop . . . . . .Saturday
Chifley Amateur Radio Club picnic . . . . . Next Sunday
Hunter WICEN meeting. . . . . 21 November

VHF to SHF DX Group talk night. . . . . 22 November
Great Lakes Amateur Radio Club meeting. . . . . 25 November
Blue Mountains ARC Computer & Communications Show. .26 November
Summerland Computer Expo . . . . . .26 November
Divisional Trash & Treasure. . . . . .27 November
Solar '94 Conference & Exhibition. . . 30 November - 2 December
Manly-Warringah Radio Society Christmas function . . 2 December
Sydney progressive ARC meeting . . . . . 4 December
WAHRA, AAPRA, & SPARC Christmas Party. . . . . 4 December

Do you have an event you'd like publicised on the weekly broadcast? If so, then please send details to the Divisional Broadcast Officer, Michael Corbin VK2PFQ, by phone on (02) 626-9288, or by fax on (02) 626-6066. Items can also be forwarded to the Divisional Office.

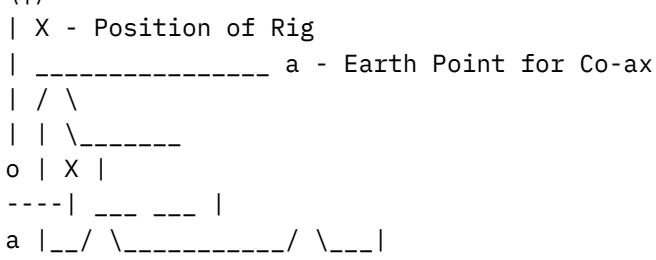
2388. Mobile Installation HELP/FAQ?

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-14 12:53:37 UTC
From: robin@ayjen1.enet.dec.com
Message-ID: <3a7mkh$ik1@nntpd2.cxo.dec.com>
Source record: 256834
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I have just installed my FT900 in the car. I am suffering however from S7 QRM and am wondering
if there are any FAQ`s or anyone has any advice on what to do to clear it up.

From my preliminary investigations it looks to be the Engine Management System as the QRM starts as soon as I turn the ignition key to the first position i.e before the engine is started.

A few details about the installation. The car is a HONDA CIVIC Esi (equiv to a US Si). The antenna
is a G-Whip Flexiten mounted via a horizontal plate underneath the trunk. The Co-ax feeding the mount is earthed at the mount point to the plate. The rig is mounted in the trunk. There is an
Earth connection to the Rig from the car chassis and is approx 12Inches in length. The power is
supplied via the recommended cable straight from connections to the battery terminals.



Any Thoughts

Robin

We encourage people to take the next element when they've passed the one they studied for...but not for the statistics. It's just that they've already paid for the exam, so they might as well. Most people who are really not prepared don't take it. Many who've just looked over the material but not really studied will take it, but usually don't pass. Others who swear they're not prepared take the next element anyway and do quite well. I think they were better prepared than they were willing to admit.

In <3a6ovl$j3n@nspace.ucsb.edu> probert@nspace.ucsb.edu (Dave Probert) writes:

As I am going for an upgrade on Nov 20th, much of what Dave says below rings very true for me.

>[Actually I had a two-year novice license in 1970, so I wasn't going
>from exactly zero].

I am currently a novice. I have been in and out of ham radio since 1971. I have had a callsign for the majority of those years (I'm on my 5th) but always as a novice. In "the old days" I found the FCC examinations very intimidating. I also lived in a city that had quarterly exams only so I couldn't always sync up. I know this is no excuse, but I guess it might make me the longest continuous novice :-(

>It turned out well though, because I had intended to stop at Advanced
>(daunted by the 20 WPM) -- but I found a CW program for my computer and
>decided to go for Extra, which I passed the next month.

My code speed is good (20+), but I too am using a CW program to practice. It's nice, no QSB, QRM, etc.

>I think what it takes is just a lot of commitment and interest (I enjoyed
>reading the ARRL books and understanding how it all fits together -- people
>who take the just-study-the-Q&A approach are really missing out).

I agree wholeheartedly with this. I have read all the ARRL license manuals cover to cover and feel more confident as a result.

>I think that everybody should become an Extra. Maybe there need to be
>higher classes of licenses. Even though I have an Amateur Extra License,
>the folks out there talking CW at > 35WPM and who can design antennas and
>radios should have additional recognition.

For the sake of egos it might serve a purpose. I want Extra just because it's there. I only intend to go for advanced in this first try. My brain can only take just so much.

>I guess I am saying that I thought it was a little too easy.

Dave, I really hope that this is true.

>--

2391. RE: Info-Hams Digest V94 #1214

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-14 13:47:03 UTC
From: ODONNELLP@MAR65.MAR.ORA.FDA.GOV
Message-ID: <941114084703.1110@MAR65.MAR.ORA.FDA.GOV>
Source record: 256868

Steve,
Yes, could be the supply. A friend of mine had a similar problem
generated by his RS35M; in his case, it obliterated an FM stereo receiver
his wife had installed in the kitchen! But get this, only when he had
his HF rig (which was being powered by the Astron supply) on 160 meters!
I've also experienced a similar problem with a different supply (the
small switching supply for the Yaesu 757, can't remember the model #).
In that case, the supply made the radio useless on 10 meters, but only
when I was using my Butternut vertical! When the rig was powered by a
different supply it was fine.....however (don't really want to
confuse the situation), but the "other supply" was an Astron 35M...

Paul

2392. Examination Opportunities Scheduled 11/11/94 to 2/1/95

[[EXAMNT11.11 : 2319 in EXAMNT11.11]]

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Special Note: Amateur Radio licenses usually arrive between 8 and
10 weeks after the test session. The FCC recently has been taking
this amount of time, or less.

The FCC considers their processing time to be 90 days--from the date
they receive the application. The FCC usually receives the application
one to two weeks after the test session (once the VE Team and the
coordinating VEC have completed their processing).

Note: Codeless Technician to Technician w/HF upgraders (who pass a
Morse code test) will effective 6/8/94 receive a new license from
the FCC that reads "TECH PLUS." Such upgrades before that date
would not receive a new license but would need to retain the
existing Technician license plus the CSCE conveying the Morse
code test credit as the only documentation issued for use of
the additional HF privileges.

****

The following test session information is provided by the
ARRL/VEC for the upcoming eight to twelve week period. For
further information, please contact the test session CONTACT
PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 203-666-1541 x282 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "bjahnke@arrl.org" or via MCI Mail to
MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or
how to locate Amateur Radio clubs, instructors, licensing
classes and/or Novice examiners in your area; please contact

the ARRL Educational Activities Department (EAD) at 203-666-
1541 x219. The EAD can also provide information on
recommended study materials. Electronic mail may be forwarded
to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to
MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-666-1541
The 1994 test fee is $5.75. The 1995 test fee is $5.90.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121
(or) 907-274-5546

C = Central Alabama VEC, 1215 Dale Dr SE, Huntsville, AL 35801;
205-536-3904

N = Charlotte VEC, 227 Bennett Ln, Charlotte, NC 28213;
704-596-2168

D = Great Lakes ARC VEC Inc., 3040 Harrison St, Glenview, IL 60025;
708-486-8019

E = Golden Empire ARS, PO Box 508, Chico, CA 95927; No phone.

G = Greater Los Angeles ARG, 9737 Noble Ave, Sepulveda, CA 91343;
818-892-2068, 805-822-1473.

J = Jefferson ARC, PO Box 24368, New Orleans, LA 70184-4368;
504-737-2315. Test fee for 1994 is $5.00.

K = Koolau ARC, 45-529 Nakuluai St, Kaneohe, HI 96744;
808-235-4132

L = Laurel ARC Inc., PO Box 3039, Laurel, MD 20709-0039;
(d) 301-572-5124, 301-317-7819, (n) 301-588-3924

M = The Milwaukee RAC Inc., 1737 N 116th St, Wauwatosa, WI 53226;
414-774-6999. Test fee for 1994 is $5.00.

H = Mountain ARC, PO Box 10, Burlington, WV 26710; 304-289-3576,
301-724-0674

P = PHD ARA Inc., PO Box 11, Liberty, MO 64068; 816-781-7313

R = Sandarc-VEC, PO Box 2446, La Mesa, CA 91943-2446; 619-465-3926

S = Sunnyvale VEC ARC, PO Box 60307, Sunnyvale, CA 94088-0307;
408-255-9000

T = Triad Emergency ARC, 3504 Stonehurst Pl, High Point, NC 27265;
919-841-7576

W = Western Carolinas ARS VEC, 5833 Clinton Hwy - Suite 203,
Knoxville, TN 37912-2500; 615-688-7771.
The 1994 test fee is $5.75. The 1995 test fee is $5.90.

5 = W5YI-VEC, PO Box 565101, Dallas, TX 75356-5101; 817-461-6443
The 1994 test fee is $5.75.

2393. US License Examination Opportunities Scheduled 11/11/94 to 2/1/95

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-14 14:04:00 UTC
From: "Jahnke, Bart, KB9NM" <bjahnke@arrl.org>
Message-ID: <2EC76F15@arrl.org>
Source record: 256837
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

[[EXAMNT11.11W : 2395 in EXAMNT11.11W]]

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Special Note: Amateur Radio licenses usually arrive between 8 and
10 weeks after the test session. The FCC recently has been taking
this amount of time, or less.

The FCC considers their processing time to be 90 days--from the date
they receive the application. The FCC usually receives the application
one to two weeks after the test session (once the VE Team and the
coordinating VEC have completed their processing).

Note: Codeless Technician to Technician w/HF upgraders (who pass a
Morse code test) will effective 6/8/94 receive a new license from
the FCC that reads "TECH PLUS." Such upgrades before that date
would not receive a new license but would need to retain the
existing Technician license plus the CSCE conveying the Morse
code test credit as the only documentation issued for use of
the additional HF privileges.

****

The following test session information is provided by the
ARRL/VEC for the upcoming eight to twelve week period. For
further information, please contact the test session CONTACT
PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 203-666-1541 x282 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "bjahnke@arrl.org" or via MCI Mail to
MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or
how to locate Amateur Radio clubs, instructors, licensing
classes and/or Novice examiners in your area; please contact

the ARRL Educational Activities Department (EAD) at 203-666-
1541 x219. The EAD can also provide information on
recommended study materials. Electronic mail may be forwarded
to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to
MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-666-1541
The 1994 test fee is $5.75. The 1995 test fee is $5.90.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121
(or) 907-274-5546

C = Central Alabama VEC, 1215 Dale Dr SE, Huntsville, AL 35801;
205-536-3904

N = Charlotte VEC, 227 Bennett Ln, Charlotte, NC 28213;
704-596-2168

D = Great Lakes ARC VEC Inc., 3040 Harrison St, Glenview, IL 60025;
708-486-8019

E = Golden Empire ARS, PO Box 508, Chico, CA 95927; No phone.

G = Greater Los Angeles ARG, 9737 Noble Ave, Sepulveda, CA 91343;
818-892-2068, 805-822-1473.

J = Jefferson ARC, PO Box 24368, New Orleans, LA 70184-4368;
504-737-2315. Test fee for 1994 is $5.00.

K = Koolau ARC, 45-529 Nakuluai St, Kaneohe, HI 96744;
808-235-4132

L = Laurel ARC Inc., PO Box 3039, Laurel, MD 20709-0039;
(d) 301-572-5124, 301-317-7819, (n) 301-588-3924

M = The Milwaukee RAC Inc., 1737 N 116th St, Wauwatosa, WI 53226;
414-774-6999. Test fee for 1994 is $5.00.

H = Mountain ARC, PO Box 10, Burlington, WV 26710; 304-289-3576,
301-724-0674

P = PHD ARA Inc., PO Box 11, Liberty, MO 64068; 816-781-7313

R = Sandarc-VEC, PO Box 2446, La Mesa, CA 91943-2446; 619-465-3926

S = Sunnyvale VEC ARC, PO Box 60307, Sunnyvale, CA 94088-0307;
408-255-9000

T = Triad Emergency ARC, 3504 Stonehurst Pl, High Point, NC 27265;
919-841-7576

W = Western Carolinas ARS VEC, 5833 Clinton Hwy - Suite 203,
Knoxville, TN 37912-2500; 615-688-7771.
The 1994 test fee is $5.75. The 1995 test fee is $5.90.

5 = W5YI-VEC, PO Box 565101, Dallas, TX 75356-5101; 817-461-6443
The 1994 test fee is $5.75.

From: mtracy@arrl.org
Message-ID: <1994Nov14.140431.3758@arrl.org>
Source record: 256854

Steven J. King (sjking@freenet1.scri.fsu.edu) wrote:
: Is there such a thing as a mailing list for the ARRL bulletins and/or
: amatuer radio related bulletins from the FCC? Tnx.

Yes, there sure is! It is one of the many ham radio related mailing lists on Netcom. To subscribe to the W1AW bulletin distribution list, send an email to listserv@netcom.com with any subject (it is ignored) and the following text as the body of your message:

subscribe w1aw-list
quit

If you would like to know what other mailing lists are available, include a line with the word LISTS in the above message.

My two cents worth on the alleged dumbing-down of ham radio.

Hasn't it always been the case that "high tech" stuff becomes easier to use and so knowledge of the theory of operation becomes less important? Look at cars...when they first came out a person had to be a mechanic to drive one. Now, lots of people barely know where to put the gas in. How many people know how a TV or VCR or CD player work? Personal computers are the same way. 15 years ago if you wanted a PC you had to build it and write the operating system yourself. Now you can buy them in drug stores. Internet is moving the same way. A few years ago you had to deal with arcane Unix (isn't that redundant?) commands like ftp, telnet, etc. to get on to the net. Now with all the services like AOL, Compu$erve, etc. anyone can do it. We have lots of net lids, too, who post to the wrong groups, post commercial notices, etc. As ham radio technology gets easier to use and people don't have to roll their own rigs, more people are going to be drawn into it. As it becomes unnecessary to build your own gear the necessity to learn the theory becomes less and less. It's just natural evolution. And as more people get on the air, it becomes more important to learn how to get along on more crowded bands...the theory of how the gear works isn't that important anymore. If the licensing requirements need to be more stringent, it's in the area of rules, regulations, and operational techniques. Theory is just not that important any more, no more than knowing how a car works is necessary for one to be a good driver. It's like the code...people who use it will learn it. People who want to build their own gear will learn the theory, too. Not being able to draw the schematic from memory for a class A tube-type amplifier doesn't in itself mean one is a poor operator or shouldn't be allowed on the air.

Guess that's probably more than two cents worth...

73... Mark AA7TA

2397. Re: I just failed the Tech test!!

Newsgroup: rec.radio.amateur.misc

I teach classes for youth on the Tech exam. We always cover the Novice written

portion first, take the test, get the CSCE, then start learning the Tech

material. It is much easier for those not familiar with the terminology and

theory to take one test at a time. It has worked very well for my classes.

2399. QST UHF noise generator

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-14 16:07:57 UTC
From: Allen Wallace <allen@dtint.dtint.com>
Message-ID: <1994Nov14.160757.14170@dtint.dtint.com>
Source record: 256840

In the may 94 QST there is a UHF and microwave noise generator article.

My question is why is there a 2.2 pf capacitor across the output on the
UHF version?

Granted, the reactance of a 2.2 pf cap @ 500 MHZ is only 145 ohms, but
all I can see is that it would roll off the high UHF output.

-->Hope this helps,
-->
-->- Andrew, aa1hx

Actually the MMRA machines have Bay State Service, you can call
anywhere in the state. When the repeaters are linked (there
is the capability to link all 9 in the system) you have to
know the area code of the particular machine you are using also.
(ie some are in 617, some 508 so you need the 1+area code sometimes.

You do need to be a member to get the patch codes. $25/year.

2402. RE: Favorite key paddles

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-14 16:36:10 UTC
From: meh@cbsms1.cb.att.com
Message-ID: <Cz9nGB.BA1@nntpa.cb.att.com>
Source record: 256805

Hello All

I have been seeing all of these responses to the question of
your favorite keyer paddle. I have seen lots of responses in favor of
the Bencher and have to agree that it is a fine paddle. I have used the
Vibroplex also but have to say my favorite paddle is the Brown Brothers
that I have and that I bought for our club to be used on the club station.
I believe there was a key paddle a few years ago that was copied from
the Brown Brothers called the Ham Key and have heard they are now out
of business.
The BB key I have is the one with the iambic lever on the left
and the hand key on the right. I have a Curtis Little Bugger mounted
on the side of the BB and wired up nice and neat with just a single
cord going out the back of the Little Bugger to the keying line of
which ever transmitter I am using.

By for now
Marty

2403. JVFAX 7.0 Bug Fix?

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-14 16:53:06 UTC
From: magliaco@pilot.njin.net
Message-ID: <3a84li$cs7@pilot.njin.net>
Source record: 256862
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.space

Has a release more current than 7.0 been made for JVFAX? Version 7.0 has
a few bugs in transmitting SSTV. On some images the program locks up
transmitting a grey-scale. On other images it rotates the left hand
with the right hand portion of the image.

I heard a rumor the bugs were fixed a new release made, but have not been
able to confirm the new release or even find it.

Does anyone have any other information? Inquiring minds want to know. :-)

People from other countries do it occassionally on vacation or business,
and come out with extras in one session. Clearly anyone who can go
from zero to a higher level in one go, isn't starting at zero really.
However you can pat yourself on the back for the pleasure of getting general
or advanced in one hit. even if you didn't start from "zero".

>Maybe there need to be higher classes of licenses.

Give them a 1x1

<big snip!>

: So the Morse test is irrelevant
: to the 38% of amateurs who use Morse, and is hazing for the 62% who do
: not.

OK, someone'll always argue about the source and accuracy of any
population survey, but these numbers aren't too surprising. Any free
thinking person can examine an open HF band (preferably not on a contest
weekend - to avoid bias) and ask for a show of hands at any
non-specialist radio club, to form his own opinion.

Morse afficionados will do it anyway. Morsophobes will forget it
anyway. The only people who get any benefit from Morse testing are those
who take to it, but would not have tried it otherwise. Countering this
are the people who would have made reasonable HF SSB operators but have
been discouraged.

To see the true effect of Morse testing, I think we have to discard
the "lost cause" people on both sides, and look at the "floating voters"
who have genuinely been influenced.

A scan of the bands convinces ME that arguments about Morse keeping
undesirables off HF are either badly wrong, or just too late :-)

Considering the likely numbers of people actually stopped by the
Morse test, I would not see its removal opening a flood gate to immense
overcrowding. A lot of those wanting HF will do the Morse anyway, it is
those who have been genuinely stopped that make the true difference.

I do not see the end of Morse testing being the end of civilisation
as we know it (tm), I don't think we'd notice much difference.

Morse supporters, like myself, would have to try to encourage others
to take it up, without governmentally-waved big sticks to force them.
Perhaps we might even do better?

Despite all the flame-wars, if it ever happened, the whole thing
could be a big yawn.

Cheers
David GM4ZNX

2407. Morse Code Practice: Perfection or 70% ?

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-14 17:41:11 UTC
From: arthurc@crl.com
Message-ID: <3a87fn$o18@crl10.crl.com>
Source record: 256850

As I work on my code, I note that I can do the slow speeds at 100%; then it falls off more and more, until I find myself at 30-40 % at 20 wpm. No surprises here; but this is my question:
I've heard it said that, for the examinations, being able to receive 70% of the code sent is what you need to figure out the multiple choice options. So, in terms of strategy, here's the question:
Should I work on a speed until I get 70% accuracy, then up the tempo a couple of notches? Or should I stick with each speed until they are close to 100%?
Something tells me that if all I want to do is pass the exams, the 70% rules will work, But if I really want to know the code, I should try for close-to-perfect.
Any help/advice from those you you/us who have already been down this path?

2408. Improvements to PC Electronics ATV Transmitters

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-14 17:46:59 UTC
From: magliaco@pilot.njin.net
Message-ID: <3a87qj$fj7@pilot.njin.net>
Source record: 256867

The RF outputs of PC Electronics ATV transmitters are indeed very dirty, but there are ways overcoming this and improving their performance. I just built a 100-watt ATV repeater using PC Electronics equipment and got the system to work GREAT, even though two more experienced ATVers said it couldn't be done. The repeater worked okay without the modifications, but improving the video modulator did improve the sensitivity of the system by cleaning up the transmitted RF, thereby decreasing receiver desense.

The main problem with PC Electronics transmitters is poor linearity in the video modulator. While the modulator has more than adequate bandwidth, it generates more than its share of intermodulation distortion. This is what causes a wide output spectrum.

I replaced the modulator in my PC electronics transmitter (and the exciter in the repeater) with a circuit shown in an ATV transmitter article published in Radio Electronics several years back. The circuit uses a constant current source rather than a resistor in the collector of the video amplifier. The emitter follower that actually modulates the final RF amplifier and driver feeds back a portion of its output signal back to the input of the video modulator. This negative feedback arrangement helps to reduce the level of IMD and increase modulator linearity.

The modulator transistor used in the Radio Electronics article is an MJE-180, not a 2N2219A as used in the PC Electronics rigs. The 2N2219 suffers beta compression under high collector current and low VCE operating conditions (i.e. on sync tips), which contributes to sync level compression. By using a more linear modulator (like the RE circuit), the sync strecher circuit in the PC unit can be completely eliminated.

Another draw back of the sync stretcher is that it squashes the audio subcarrier at sync time. This modulates the audio subcarrier with sync pulses producing sidebands around the audio subcarrier. It can also produce a "buzz" in the received audio if the signal level is not sufficient to cause full limiter saturation in the TV receiver.

By replacing the video modulator of the PC unit with the circuit described, linearity is improved and so is the RF output level. I demodulated the RF output of the 1.5 watt PC repeater exciter after making the modifications and plotted it against the video input on a 100 MHz oscilloscope. The linearity was excellent, and there were only a few degrees of phase shift on the color subcarrier. The output level was also raised to 2 watts PEP. This drives a 100-watt Mirage amplifier with NO sync compression! In fact, the output looks every bit as good as any of the local television stations.

PC Electronics audio can use some improvement too, especially with mike-level input signals. Try not to drive the audio input level to the

point where the speech limiter starts to clip, and the audio will sound fine. I used a completely homebrew audio section in my ATV transceiver and have achieved broadcast quality audio response.

>
>N2YGN might be too new..although it was in the summer 1994 edition of QRZ.

It's online at the QRZ server, which has the latest CD. Perhaps it
was being updated when the other gentleman tried to search my
callsign. Or he doesn't know how to do the search. I see that the
database was updated again fairly recently. A few weeks ago it said
Class: T. Now it says Class: G.

Database Search Results

N2YGN FUAT C BARAN Class: G 10/6/94
3215 ARLINGTON AVE 4H Born: 10/31/64
BRONX, NY 10463

I'm not in the Buffalo server yet since no one has donated the latest
CD to them. My original response was to point out that www.qrz.com
had the latest info and that the MIT server was accessing the Buffalo
server's database which was one (probably two) releases older. I did
not intend to imply that German (or other non-U.S.) callsigns weren't
real. I also don't think it was the intention of the QRZ CD-ROM folks
or the folks at Buffalo or MIT to imply that either. Apparently some
people try hard to be offended.

Very generally speaking, the pass rate for all elements is in the mid-60% range. I have never seen statistics for individual elements. The data is not collected at our VE sessions. Just the overall pass/fail rate.

The information is collected by the FCC US-wide and distributed back to the VECs. That's where I saw the statistics.

Look at the Morse Code Character Set in the ARRL handbook. It has a whole lot of charcters, including many (such as Parentheses, Paragraph-Starts, Quotes, etc) that are definitely not used commonly...my understanding is that there is no character for the exclamation mark.

2414. Elmering: The effect of current VE scheme on it

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-14 18:36:40 UTC
From: pwalker@mbi.moody.edu
Message-ID: <pwalker.198.002D9E6D@mbi.moody.edu>
Source record: 256875

I was sitting in on a VE session this weekend and started wondering about something that became an interesting discussion for the VE's.

What effect has the current availability of exam sessions (we hold one/month with four additional night sessions for a total of sixteen/year) on elmering in the hobby?

Is elmering still needed in the day & age of appliance operators?

Are there appliance operators because there aren't elmer's, or is it because of the inexpensive rigs that you can buy today?

Has the FCC, through the VEC program, sacrificed technical knowledge for the sake of infusing the hobby with new numbers?

Are we more concerned with getting the license and operating than asking the question first if we are ready to operate?

Does anybody care?

I must admit that once a friend of mine got me interested in the hobby, I went out and bought the GW books from Radio Shack and took the exams. I listened to code tapes and took the exams. My license arrived and I started operating. Since then, I have contacted several of the more knowledgable hams in my area to learn more about their various expertise (ie: CW operating, antennas, packet, contesting, etc). I am learning more and more each month. I am always willing to listen to constructive criticism. I want to be the best amateur radio operator that I can be.

I guess the question is what do we do after the license arrives? Do you continue to increase your knowledge within the hobby, or do we just operate blindly - not caring how we appear to the rest of the membership?

It probably would make a difference knowing whether or not you actually intend to work CW, or if you want only to pass the test. If the latter is the case, the '70%' strategy might work. Personally, I worked enough CW on the air after I got my novice, etc...that passing the 20 WPM seemed easy. That was last year...still haven't go the theory down though.

I would work at getting as close to 100% copy at the desired speed as possible...but whatever works...

I'm currently learning code and am using Super Morse on an
old 8088 Zenth laptop. The sound out of the speaker is
horrible so I hooked up my MFJ557 pratice keyer to the
serial port of the computer. Super Morse can be
configured to toggle some of the RS232 lines of the serial
port... now Super Morse can send from the computer to the
practice keyer (and produce a nice beeping sound) and I can
also send from the keyer to the screen of the computer
(Super Morse will decode and display the characters as they
are sent!). All this has added a lot of fun in learning
code.

See the Super Morse documentation for a suggestion on how
to interface the keyer and the computer.

Source record: 256877

Zack .....

Coupla corrections to your post:

The R/C radio manufcaturers are being very responsive to
the radio amateur desiring to purchase equipment on the
6 meter frequencies. JR, Futaba, and ACE all have most
of their product line available on 6 meters .... in the case
of Futaba this includes their bottom end $100 four function
basic systems all the way to the top of the line computer
controlled nine function $1000+ model.

Basic advantage is not only less interference, but also
(at least in US and probably W/W) that there are fewer
modellers on the ham bands so therefore less of a line
wait at the firld waiting for a frequencey to be free.

A very well written and more detailed discussion of the
frequencies availble etc for R/C use of the 6 meter ham
bands can be found in current article thread (Nov 4, 1994)
in the rec.models.rc news group.

73 ... good dx ... and always check your "6" at the flying field !

I've been playing around with an idea for a project and wanted
to run it by the "net" to see if anyone else had tried this
before I went out and spent my hard earned pennies on parts.

A friend is planning on installing a 10m link into his 2m
repeater system. I run a ranger 2950 in my car and would
like to access the autopatch on the repeater. I know most
2m rigs have a touch tone mic to facilitate autopatch
operation. I assume the cicuitry used to generate the tones
is in the mic itself. If so, is it possible to use one of
the popular 2m mics on my 10m rig? I assume I'll need to
run power up to the mic to power the circuitry in addition
to matching microphone impedences. Has anyone done this
before? If so, any hints or suggestions would be greatly
appreciated.

Thanks,

Tony

2423. MFJ 1270C message renumbering

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-14 20:48:38 UTC
From: donahue@access.mbnet.mb.ca
Message-ID: <3a8if6$is3@canopus.cc.umanitoba.ca>
Source record: 256849

Does anyone out there know how to set the message numbering in the MFJ 1270C mailbox back to zero, assuming that there are no messages in the mailbox when this is done. I have read the manual, but have not found anything in the way of a message renumbering function. I realize that I could do a 'cold' reset (or memory reset) to the unit, but I would like to find an easier way to do this.

It is NOT imperative that I reset the message numbers, but I think it would be better if someone left a message and it did not show up as message # 12345...

Thanks in advance for any ideas/input/help...

2424. Bandpass Filter

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-14 20:58:23 UTC
From: bowling@cebaf4.cebaf.gov
Message-ID: <Cz9zLB.1xD@murdoch.acc.Virginia.EDU>
Source record: 256848

I am trying to make a simple bandpass filter centered around
91 MHz (commercial FM), with a bandwidth of around 5 MHz.
The input/load is 50 ohm. A simple 3-pole Cheb or something.
Does anyone know of a filter program available on the net
which would do the above design? The ARRL book has a little
on the subject, but I am somewhat lost.

Thanks for any help - Bruce

SUNSAT micro-satellite launch on stream for 1996.

Stellenbosch University's SUNSAT micro-satellite is proceeding full steam for launch in January 1996 on a US Air-Force McDonnell Douglass (MDA) Delta 2 mission from Vandenberg Air-Force base in California.

Following a favourable programme review at Goddard Space Flight Centre in September, NASA and South Africa's Foundation for Research Development are setting up an inter-government Memorandum Of Understanding (MOU). NASA will arrange launch of SUNSAT in exchange for orbit data from a precision

NASA-supplied satellite navigation receiver in SUNSAT. The data will be used by NASA for gravity field research.

Successful technical meetings with SUNSAT engineers last week at Vandenberg Air-Force Base, and at McDonnell Douglass in California approved SUNSAT's ground operations plan and launcher interfaces, and enabled launch vehicle modifications to begin.

Stellenbosch is ready to start modal survey tests on SUNSAT's structure im mid November as required by NASA, but must still find sponsors for the solar panels and extendable boom (R400 000 total). These two USA items were originally planned to be sourced from the USA.

SUNSAT, is a small (50kg), cost effective imaging satellite that provides the core student activity in the Electronic Systems Laboratory in the Electrical Engineering Department at Stellenbosch University. Denel's termination of its satellite programme, an activity unrelated to SUNSAT, leaves the university laboratory as South Africa's only centre of expertise and development in this field. The laboratory regularly attracts foreign visitors, is starting to export technology, and led to a first Conference on Small Satellites in October, which attracted papers from four overseas countries.

SUNSAT is a low earth orbit satellite to provide high resolution images for environmental purposes, store and forward data communications, and is also part of a programme to interest school children in technology.

SUNSAT has been developed by 23 graduate engineering students at Stellenbosch and UCT since 1992, together with academic and technical personnel. Ninety percent of its computer, communications, and imaging technology is directly applicable in terrestrial systems, hence its support from industry in furthering engineering research and education.

Prof. G.W. Milne
SUNSAT Project Leader.

>Yes, but how have these Extras and Advanceds gotten this far without
>having learned this stuff before now? I think it's a clear indictment
>of the test difficulty levels and published answer pools.

To some extent, written tests of any kind will never make up for this. There's a long gap between knowing an answer on paper and applying it in the real world. I experienced this a few months ago when I was having trouble with my antenna tuner "drifting". Now, at the time if you had asked me questions about baluns, from my reading I could have explained to you what "saturation" was. I could even have told you that real magnetic saturation only rarely occurs with modern ferrites; overheating occurs first. However, I was completely clueless that the problem I had was a balun overheating -- I had to get some advice from more experienced folks to make the connection. If you want to guarantee that, say, Amateur Extra licensees really have some level of practical knowledge, you'd have to institute some form of practical test that would be impossibly hard for the VE system to administer consistently.

>be called dumb when asked by an Extra. If you say it doesn't happen, let
>me tell you about the conversation I heard recently between three hams, one
>an AA6??, about how many micros were in a pico (that's how they framed it).
>Not one of them had a clue.

C'mon, anybody could forget the arbitrary value of a prefix. At least they knew that they were prefixes, and even had the relative sizes right. (I have trouble with femto and atto myself, and I can never remember what comes above Tera.) Now, it does seem kind of dumb to have a three-way conversation (I assume it was on the radio) about something that could be looked up in nothing flat, but it happens all the time. On USENET as well.

> Should I work on a speed until I get 70% accuracy, then up the tempo a
>couple of notches? Or should I stick with each speed until they are close
>to 100%?

Well, it all depends on what you want. Personally, I'd pick some accuracy level and once you reach it, go on to a higher speed. Even if you never reach nearly 100% at any speed before moving on, you'll eventually be able get nearly perfect copy at speeds slowere than what you are working on. So, 70%, 80%, 90% aren't out of line as goals.

The thing to remember is to always work higher than the test you are trying for. For instance, I would feel semi-comfortable at 22-25 wpm before taking the 20 wpm test. (Well, at least before I expected to pass it. I am of the opinion that you should keep testing until you fail a test. If you're going for 13 wpm, give the 20 wpm test a try. You may actually pass it...)

Just my $0.02...

>This may still be the "official" bang(!).
>---
My face is red. Mister CW Operator's bifocals must have fogged over.

The sharp-eyed reader will have noticed that I gave the
"comma" Morse character _ _ .. _ _ as being that for the
"exclamation point/bang" character. Duh.

Re-reading the faded 50's Philmore practice set's dot-dash chart
(it just isn't the same reading it as hearing it),
shows a ! character thusly:

·_ _ _ _ ·

However, other charts show this as being the "apostrophe."
Guess we must need an official Morse "bang" character, or
another way to codify our exclamations.

>

Aaacccck! Nope..nope...wrong direction. I agree with Jeff's original posting. There are FAR too many people who keep asking questions that they could be expected to KNOW the answer to. If a person has been able to pass the tests for a Tech +, I would expect that the individual would be able (barring debilitating handicap) to correctly assemble an HF station, with the wattmeter in the correct point of the chain. I would also expect them to know how to tune an antenna for best VSWR, to be able to solder on a PL259, to properly diagnose a faulty tube/transistor/IC circuit...and correct it.

Saddly, this is not the case. We have in our midst two groups that fail every such sort of 'test'...those who simply memorized the test questions, and managed to finally hit 7/10 on the CW exam, and then there's the other group...the ones I like to call the "LAZY-OPS".

The Memorizers will eventually settle in to a good behaviour pattern of researching and reading (just like they did for the exams!) about things until they CAN do these various little things. The "LAZY-OPS" are a totally different breed of cat. They can always find someone to do their thinking for them. Just as they can always find someone to solder on those "!@#$%^&* PL259 connectors...how-bout-it, willya huh? PLEEZE?" The "LAZY-OP" is a pitiful sight, all thumbs - not a shred of initiative, they wouldnt RTFM to save their miserable lives. These pathetic creatures probably started as either a "Normal OP" or as a "Memorizer"...but somewhere along the way they decided that this stuff was just too much trouble, and besides if you annoy someone else enough they will probably do it for you just so you'll shut up and stop whining and sniveling.

We see this more and more on the Internet, people asking all sorts of questions, the answers to which are most likely within easy-enough reach, inside any number of reference books. What alarms me the most about this is the increasing number of COLLEGE STUDENTS that would rather ask beginner's questions here than go to the campus library! And if you

even suggest that they should RTFM...even a little...you get 8 gigabytes of sophmoric hate-mail
about how 'you shouldnt flame college students!'...yeah right! Like their poor sensitive little feelings will get hurt!

The fact is, a greater number of people in colleges are functionally illiterate then ever before. Doubt that? Ask someone from the Higher Education Council of America. Reading and the
related study skills are fast on the decline! That's the root of the problem: People who won't
RTFM because they simply CAN`T! The easy access to semi-expert information (such as this very
newsgroup!) is erroding the general public's ability to read and research a given topic.

You've seen it before, those frosh that windup at semister's end asking 'sci.electronics' in
empassioned tones for 'just a little help with this Ohm's Law stuff, and Can I buy electronic
components an solder an stuff at Radio Shack?" "Can anyone tell me the frequencies for the touch-tones on a telephone?" This is our great, learned, resource??

As for the question: "When did this decline begin?" It simply does not matter. What matters is
that the problem is exascerbated EVERYTIME someone simply pacifies a questioner, rather than
making them get involved in finding the answer! So tell a newbie to RTFM, and point out that
the Library is more than just a place to keep the books stashed! ;-)

2435. Please read: 6M AM equipment SURVEY

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-14 23:35:18 UTC
From: rbellville@aol.com
Message-ID: <3a8s7m$qr4@newsbf01.news.aol.com>
Source record: 256789

I'm putting together some info regarding 6 meter AM radios. I'd like to survey the 'net about their experiences with any particular radio. I'd also like to know the purchase price if you bought it used. Any stories or anecdotes are also welcomed.

I want to put together a sheet for hams (new and old) to show them how inexpensive it can be to get on 6 meters. There are an abundance of these radios at hamfests. We also need the activity on this band so that it doesn't become another 220MHz. It will also give some crude guideline on the market price of these radios.

I think that it would be fun for most hams to clean-up an old rig, build a simple dipole, and get on the air. Help me tell them! When completed, I will post to the 'net.

Thanks in advance for your participation.

2436. Shocking antenna

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-14 23:36:52 UTC
From: dave@flowcali.stem.com
Message-ID: <3a8sak$il7@iserver.stem.com>
Source record: 256787

Greetings! My antennas are all of the dipole sort and out on my balcony. The center insulator has an S0-239 connector and when I use my radio I go out and manually plug in my coax. The thing is, when I'm done and powered off and go and unplug my coax, if I make the mistake of touching the center pin, I get a rather unpleasant shock...also, whatever is supplying the charge doesn't really dissapate as I have managed to shock myself days after using the radio. In addition, this has occurred on both my HW-101s and TS-520. Is the charge just a characteristic of the 6146 tubes? I had thought the resistors sitting on top were there for the express purpose of bleeding off all charge, but...I still get the shock...can anyone supply me with some definative info on this phenomenon?

73 de dave, n9uxu

PS - Please feel free NOT to email such helpful comments as "Don't touch the center pin"....:-)

2437. HTX-100 offset mod

Newsgroup: rec.radio.amateur.misc

2439. Tnc/rs232/mouse comport conflict

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-15 01:50:02 UTC
From: ablackbelt@aol.com
Message-ID: <3a944a$sl5@newsbf01.news.aol.com>
Source record: 256801

Help needed on solving the problem of multiple serial port connections. My
last computer had a parallel mouse and left just enough room. Anyhow
problem is this......
Mouse is com1
internal modem is com2
I know that Com1 and 3 share same irq and 2 and 4 share same irq. I
bought a serial card that has addressable com ports. I have the serial
cards two external ports set to Com 3 and com 4. The mouse has its own
connection off of another board as com1. If I put the kam+ tnc on com 4
then there is no conflict between the tnc and internal modem as long as I
don't use the modem. So far so good.
Now I have this rs232 interface from Kenwood which I think needs a com
port to control the TS850 for the logging pgm etc. If I hook it to com 3
then since the mouse is always being used won't I have a problem. As I
mentioned the last computer I had (lightning got it) had a parallel mouse
(or some other than serial because it did its own thing on a separate
board). I think I have the comport info correct but I really need help on
this one! I don't think any of the devices uses a lpt port so what do I
do? In a nutshell how do I connect a tnc, rs232 computer/rig interface,
mouse, and internal fax/modem so that they coexist without conflict. I
remember that my pkgold pgm allows you to address the com port thru
software. (I have been off packet due to the lightning strike to the shack
for over a year now) The extra addressable serial card provides some
flexibility but I am still in a fog! HELP PLEASE! FROM A FRUSTRATED WANNA
BE EX- PACKETEER

2440. Re: Is it just me?

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-15 01:57:09 UTC
From: wcoyle@delphi.com
Message-ID: <xQ-1Mw9.wcoyle@delphi.com>
Source record: 256800

This is a bunch of crap! Why are we arguing with each other? Why does everyone bitch so much. If you have a problem with the current crop of ham operators, don't bitch about it DO SOMETHING. Answer questions and help out. No one comes into ham radio knowing everything. I'll be the first to admit there is a lot of things I don't know but that's why I'm here! To learn, and expand my understanding of electronics and radio operation.

These usenet groups are a *GREAT* place to start. If someone has a question, answer it. I was kinda lost at first, and I had no Elmer (where were all those "experienced hams" when I needed them?). I learned most of my stuff from reading books (gasp!) and asking questions. I'm a General now and I've helped Elmer three different people, 2 of them are hams now. I take a great deal of pride in passing on what I've learned in my 2 short years in Ham radio. When someone learns something from me and says "thank you" it's worth more than any person could ever pay me. When someone asks me a question, and I don't know the answer I go read up on it and we learn about it together. Who knows, you just may make a friend in the process.

As for Extra class hams who use speaker wire to extend a catv connection, that is sick. That person should be drawn, quartered , and rode out of town on a rail!

In closing, lightnen up, and try to help out those hams who are new and in need of it. If all you do is piss and moan, you might as well pack it in a quit.

Reminds me of the time my friend and I were talking on the radio and watching
Die Hard 2 at the same time. We both noticed the HT's at the same time, I
believe they were TH-45AT's but I could be mistaken. Also a good shot of some
sort of fnacy receiver when the army boys came in. I think it was either a
Kenwood or Icom top of the line. Couldn't quite read the model number though
:-)

Hi Greg, I learned Morse code in a couple of hours on an old AM receiver with no BFO. I have never worked hard for anything including ham radio privileges. Does a genetic accident grant us the right to gang up on the less fortunate and deny some individuals access to publicly owned airwaves simply because they are biologically incapable of distinguishing the width of an audio tone? Hey, let's eliminate even more potential hams by raising the code testing audio frequency to 20 kHz, what do you say?

> between each hot leg 230/240 vac?

Mike, G4KFK replied:

For exactly the same reason that you can't get 2 lots of 115 V AC in
Europe. Household mains is derived from a Star-Connected 3 phase
system whereby the 'cold' or neutral wire is connected to the ground
at the substation. In other words the 'phase' or live wire is at the
full mains voltage with respect to Earth.

THATS NOT EXACTLY TRUE. YOU DONT GET 230 AND 0 IN MOST OF EUROPE. MOST
PLACES RUN 110 PER PHASE THUS GIVING YOU 230 OR 110V PER PHASE AND GROUND.
HOWEVER, AS USING GROUND FOR A LIVE LINE MAY PRODUCE FIRES, ALL NEW HOUSES
IN CONTINENTAL EUROPE HAVE TRIPS, THAT IS CB'S WHICH DETECT MINUTE LEAKS
BETWEEN PHASES AND EARTH AND TRIP THE POWER. IN THE OLD DAYS, EUROPE USED TO
HAVE 110V VOLTAGE (ITS STILL AVAILABLE IN OLD HOUSES).

VEKINIS Peter (pve@dg13.cec.BE) wrote:

: 2/ UK IS THE MOST EXPENSIVE MARKET FOR RADIOS IN EUROPE (ALTHOUGH GERMANY
: COMES PRETTY CLOSE TO THE MOST EXPENSIVE CATEGORY AS WELL).

Too true. As a rough guide, in Britain, expect to pay double US
prices, but expect to get a 1 year warranty. Even British made cars
magically become an awful lot cheaper when sold in the US.

: What is cheap in the UK is second hand stuff. The UK economy is such that
: people need money and sell their equipment at real low prices.

Posted asking prices in ads for second hand gear in the US are still
a lot cheaper than what people pay in the UK. With the grossly
marked-up prices here, people selling second hand stuff (that is not
junk) hold out for as much as possible in order to afford something new.

Brits who travel to the US often buy their gear there, pay import
duty (several%, depending on item and phase of moon) then pay VAT
(17.5%) on top, and still report 33% or better savings.

Cheers
David GM4ZNX

???

Most of europe is three phase - There are three lots of 380v (up to 440v)
at the sides of a triangle! Earth or Neutral is at the middle of this
triangle - yielding voltages of 200v (up to 240v) from Neutral to each corner
(each phase.)
(the waves are at 120 degs relative to each other - not 180 as in two-phase
systems. BTW. In UK. it is usual to have only one phase in each house
(your neighbours on each side will each have another phase) In Germany, it
is usual to have all three phases and our electric cooker has all three
divided among the different "rings"

> THATS NOT EXACTLY TRUE. YOU DONT GET 230 AND 0 IN MOST OF EUROPE. MOST
> PLACES RUN 110 PER PHASE THUS GIVING YOU 230 OR 110V PER PHASE AND GROUND.

DON'T SHOUT!
What is _most_ of Europe? Brussels old-city? Rural France?
I can only quote from bed-and-breakfast stays in places from Budapest to
Stockholm, Berlin to LlanfairPG and Edinburgh to Madrid, and I never found
110v since the early sixties!
It exists, I know, as do 60v and 28v, but they are a big fire risk because
the current per watt is too high.

As for earth-leakage trips - they monitor the difference between the current
flowing into the circuit relative to that flowing out. The actual earthed
point of the neutral may be several hundred metres away at the actual
transformer and your neutral can be several volts up in the air! Imagine the
fun if you connect your neutral to your water pipes, and the whole housing
estate prefers its earth return through your pipes! Free hot water!

> IN THE OLD DAYS, EUROPE USED TO
> HAVE 110V VOLTAGE (ITS STILL AVAILABLE IN OLD HOUSES).

BTW, I do tell a lie! A friend of mine lives in a thatched farm house and he
has his whole house wired in what looks like coaxial cable. Live in the middle,
neutral on the uninsulated outer. He had 110v, ES (screw in) bulbs, 1.5 AMP
power sockets (Wandsworth thin-pin), a calor gas cooker and a 12volt TV.
BUT he had an isolation transformer at the electricity board feed in the
outhouse! Maybe he hasn't changed it yet.

2458. Re: Line voltage in Australia

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-15 12:51:33 UTC
From: pvr@wg.icl.co.uk
Message-ID: <9411151247.AA04236@ss38.wg.icl.co.uk>
Source record: 256817

Don N7EF writes:

How often, in Australia, do you hear of folks being electrocuted in
their homes? In the USA (110v for most household stuff) it rarely
occurs, you have to do something really stupid like knock a radio into
the bathtub while you're in it, to end up dead. You may get "bit" now
and then, but it's not generally fatal. I sure as hell wouldn't want
240v on my hair dryer, toaster, small power tools, etc.

end quote

Well, here in the UK we also have 240V line to neutral (3-phase - 415V
between phases). At least for the moment - we are moving to 230V in
January to align with continental Europe who are currently on 220V.

There are very few electrocutions - at least none that reach the papers.
Unless you have wet skin, 240V AC is not that harmful. It hurts a lot, but
not as much as the same voltage DC!

Now I've had a 350V DC belt, and (expletives deleted)... wouldn't want
one again. Thereagain as a kid I shorted my model railway (12V DC) and the
back EMF generated when I broke the connection....

Also all electrical goods must conform to British Standards or European
Norms which require all live connections to well and truly kept away from
little fingers. So Europe (& Australia) are not dangerous places, really...

>(Oh yes, it ruined my tip as well, but i could still use it for other
>PL-259s after that...
>
>Am I sprouting rubbish?

Unfortunately yes, but not real rubbish. You were right in thinking a bigger tip would transfer more heat. However, wattage does count, as that's what generates the heat. Tip *temperature* doesn't have to be higher to solder heavy objects, but heat capacity does matter, and that's a combination of a large enough tip to transfer the heat quickly, and enough wattage to generate the heat.

Now I use a 300 watt American Beauty iron with a 5/8ths inch tip, and work very quickly, but a 100 watt gun will do. Using an iron of less than 50 watts generally overheats the coax insulation before solder will flow, or gives you a cold joint. That can lead to a bad impedance at the connection, or even a connection failure.

The way to do a PL259 connector is to trim the jacket, braid, and inner insulation so that the cable fits the connector properly. Then *tin* the braid heavily using plenty of flux, and then reflux the tinned braid after it cools. Slip the cable in the connector, solder the tip, and then *sweat* the connector body, letting the flux boil out the holes, until the solder on the braid reflows and establishes a bond with the *inside* of the connector body. That will give you a good permanent connection. Trying to solder through the holes is a waste of time, and will lead to bad connections.

Gary

There is no international speed requirement. Just the ability to send by hand and receive by ear. (However the requirement is actually worded...) You are correct about exemptions in the US: you cannot get an exemption for the 5 wpm test.

>level of knowledge required to pass the former is much, much greater than
>the level of knowledge required to pass the latter.

Boy, I sure am glad that those marks landed in the correct spot!

Cliff, this kind of opinion is in the worst interests of
Amateur Radio and shows your total contempt for the modern
amateur. Hams today study just as hard and work on their CW
as intently as any before.

As for Ohms Law knowledge being optional... my advice is not to
expose this "fact" so liberally! It says too much about what
would otherwise be a merely piss-poor attitude.

2463. Summary of Nov. 12th balloon flight

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-15 15:05:04 UTC
From: djs19@ksu.ksu.edu
Message-ID: <3aain0$e7@matt.ksu.ksu.edu>
Source record: 256739

November 14.1994

Summary of November 12 balloon flight.

The SSOK (Sky Science Over Kansas) group launched and recovered its 9th payload.

Wind at the launch site played a major role in moving the release time up to 1336 UTC instead of 1500 UTC. Surface winds ranged from 10 to 15 knots with gusts to 20 knots. A large cotton sheet was draped over the balloon to carry it out of the inflation building and into an open area. This sheet was held by 6 people and it kept the balloon from being controlled by the wind. Once at the launch area a string lanyard was attached and the sheet removed, the balloon was allowed to ascend under lanyard control until high enough for the "runner" to get the payload underneath to release.

Ascent rate averaged between 800 to 900 feet per minute and a maximum altitude of 111,523 feet was reached. Recovery was 109 miles from the launch point which was near Topeka, Ks. This flight is the second in a row that the landing has been observed by a member of the recovery team. The aircraft that was using the low power beacon on 147.31 mhz for direction finding nearly intercepted the descending payload and parachute at 2500 feet. The aircraft circled the payload until touchdown and waited for the recovery team which was minutes behind.

Had the gps side of the payload failed the low power beacon would be the only way to locate it, and by powering it off of separate batteries it can last up to 10+ days.

More flights are planned for the future and should be just as interesting and fun as all the previous ones. Total participation was around 20+ for launch and recovery plus many more that listened in and gave reports. THANKS..

Please note, this is not a flame directed at you, Dave. It's just that
something you said resonated for me.

In article <3a6ovl$j3n@nspace.ucsb.edu> probert@nspace.ucsb.edu (Dave Probert) writes:
>
>I think what it takes is just a lot of commitment and interest (I enjoyed
>reading the ARRL books and understanding how it all fits together -- people
>who take the just-study-the-Q&A approach are really missing out).

Yeah, it's the interest that's important, the urge to *know* and *do*,
not the wallpaper.

>I think that everybody should become an Extra. Maybe there need to be
>higher classes of licenses. Even though I have an Amateur Extra License,
>the folks out there talking CW at > 35WPM and who can design antennas and
>radios should have additional recognition.

Isn't the fact they are out there actually *doing* those things reward
enough? If they don't get sufficient satisfaction from actually *doing*
things, the ARRL owns printing presses, and has lots of wallpaper they
can collect. The government need not be involved in stroking their egos.

If you admire the people who are actually doing the things an Extra
should know how to do, then you should get out there and *join* them
in doing those things. It's amazing how motivating it can be for you
to learn antenna design when you have a pile of aluminum in front of
you and a vacant tower top waiting to receive it. That's the *real* test,
the only one that counts in the end, what you *do* with your skills and
knowledge. Passing an exam means nothing by comparison.

I guess what I'm saying is why do you feel an ascending series of
government exams is required to motivate you to go out and learn
the skills necessary to be an experimenter with RF? Don't you have
the desire to learn those things for their own sake? For what you
can *do* with them? That's the way I've felt these past 30 years.
I've continued to learn things because I wanted to do things with
that knowledge, not because some government bureaucrat said I had
to, or because of some status a piece of wallpaper might convey
to the easily impressed.

Note well, to forstall the inevitable flames, that I do believe
the government has an interest in requiring a suitable *entrance
exam* to the lifelong learning process that is amateur radio in
order to make sure amateurs know how to operate safely and without
causing interference to other services. I don't think the current
exams, even through Extra, do a sufficient job of assuring that.

If I were designing the entrance exam, I'd make it an open book exam with about 20 real world problems demanding a solution. You'd have to actually figure out how to solve the problem, figure out where to get the information to solve the problem, and actually come up with an answer. You could have Handbooks, copies of FCC rules, etc to draw upon, but the solution would have to be one you figured out. There would be no time limit on the exam, but you'd have to do it in one sitting.

I wouldn't publish the problem pool, and I'd devise categories of problems so that tests would draw on a sufficiently broad range of skills to satisfy the government that you know what you're doing.

Harris, and most of the other commercial TV transmitter manufacturers, would be interested to know that a SAW filtered VSB signal will regain it's lower sideband after amplification, since all of their current transmitters *do it exactly that way*. If the amplifier is linear, and it had better be for AM television, the lower sideband will not reappear any more than the LSB of a USB speech signal would reappear after being amplified. The commercial world has long abandoned throwing away one quarter of their hard won power in an output filter. It's time amateurs learned to do the same thing. And it's unforgivable to transmit a full DSB ATV signal on the 70cm amateur band. Any company that sells such equipment should properly be chastized and shunned. At the *very least*, PC Electronics transmitters should come with the necessary filters to meet VSB standards. Anything less is unacceptable.

The 210X didn't cover 160 meters. That was the 215X. And neither would approach 250 watts output, more like 70-80 watts. These radios were among the very first ultra-compact solid state HF rigs (1970s). They suffered all the ills of first generation solid state equipment. The *collector* value of this old radio *might* approach $500, but that's a lot more than it is worth as a radio you'd want to *use*. For $500-$600 you can find a used IC735. That's a radio with modern performance.

I think so. I believe a positive selling job would be more effective in getting actual on the air Morse operators than a negative government stick. People will work a lot harder, and with a lot more enthusiasm, to learn something that they want to use, than they will for some drudgery they have to put behind them.

>is wrong."

No, just your confounding paraphrasing. Read what I wrote. *Irrelevant*
effort equals hazing and the rest. I have no problem requiring effort
where effort is warranted, but the object of the effort must serve a
legitimate purpose in forwarding the goals of the service. I contend
that Morse testing does not meet that standard now, if it ever did.
In the early days, people learned Morse, not because the government
said they had to (though it did), but because that was the only way to
do radio. That time is long past.

>Gary, do you really think people don't take more pride in things they
>gain with effort than in things they gain without???

I think people take pride in their genuine accomplishments toward a
desired goal. I think that they resent irrelevant hurdles placed in
their way by arbitrary authority. Two very different things. The latter
is what I'm calling the "effort" theory, or simple hazing.

>You think hams
>are (generally) well behaved because they know a little electronics, a
>few regs, or even Morse Code? Nope. There are two reasons hams are

>(generally) good and responsible operators: First, most of the
>Amateur community sets a good example for new hams; Second, people
>take pride in their achievements. They work hard for the priveleges
>their license grants. Pride fosters mutual respect.

I agree that people take pride in their achievements. Where we part company is that you think passing a test is the end all and be all of achievement while I don't. I think people take pride in what they do *every day*, not in what they did once upon a time in front of a government agent. Only people who are very insecure need a piece of paper from an authority to validate their self-image.

Yes, a bit of analysis shows the problem is not the supply in any of the cases you list. The problem is stray RF getting into the supply because of a bad antenna or station configuration. The power supply behavior is just a symptom of the real problem. Solve the "hot" shack problem, and the power supply problems will go away.

2475. Graphic Equalizer as an Audio Filter?

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-15 16:34:08 UTC
From: mam@cbnews.att.com
Message-ID: <CzBI0x.209@nntpa.cb.att.com>
Source record: 256737

Is this simplistic or what?

Why can't I take a $5 garage-sale Graphic Equalizer, place it between my Rig and Speaker, and use that as an Audio Filter. Sure, it's not going to notch, and the skirts aren't steep, but it's inexpensive!!!

Thanks for any reality checks on this.

Mark KB2els

2476. Code and International Politics

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-15 16:41:12 UTC
From: phb@syseng1.melpar.esys.com
Message-ID: <phb.784917672@melpar>
Source record: 256738

A few comments regarding my original post and some of the replies:

I. Re the ITU Regulations: I looked them up, and they state the following (this isn't the exact wording or numbering of the regulations as written, but I don't have my copy here at work):

(1) That an applicant for amateur license shall "demonstrate" the ability to send by hand and receive by ear in the International Morse code;

(2) That ITU member administrations may waive the code requirement for persons whose operation will be confined to the frequencies above 30 MHz;

(3) That member administrations are responsible for establishing "suitable means" of confirming the operational and technical competence of applicants.

COMMENT: Item (1) is pretty cut and dried, i.e., the ITU regs require some code ability. Item (3) leaves it up to the member administrations to figure out how to establish competence. In one foreign country in which I used to live, that "method" was a signed statement by the applicant that he/she "affirmed the ability" to send and receive at 10 WPM; there was *no test* required.

Some might say that the foreign country in question was "stretching" item (3) pretty far, but they've gotten away with it for decades. In fact, it's not unlike the old requirement for renewal in the U.S. that required a ham to "affirm" his/her ability to send and receive at the original speed required for the license.

II. Japan dropped the code requirement by "taking exception" which is allowed under ITU regulations:

Gary, I could find nothing in the amateur portion of the ITU regulations to confirm that "taking exception" is allowed. Can you provide a reference for this? I don't have the whole ITU regulation package available.

III. Code is a way for FCC to ensure sufficient qualified radiotelegraph operators are available.

COMMENT: Gary, I don't think you really believe this; I know I don't. The U.S. Navy *dropped* the 16 WPM requirement for RM2 (Radioman 2nd Class, E-5) in the 1960s and stopped teaching code in Radioman school later on, although it may have been reinstated

since (it was stupid to drop it then, long *before* direct satellite comms were installed on all Navy ships and shore facilities). In addition, the Coast Guard has dropped all CW broadcasts to the maritime community. Granted, many countries still use CW for maritime comms, but the day of the maritime CW operator is drawing to a close. So, there has to be another reason why FCC still requires code for hams on HF (see below).

IV. Japan dropped the code requirement and "the world didn't come to an end."

Japan is only one country. However, if a large number of countries began dropping the code requirement, the following scenarios are at least possible:

(a) commercial interests might "smell" a chance to latch onto part of the amateur CW allocations on the premise that occupancy would go down since many operators would switch to voice operation only;

(b) At the next WARC, some of these countries (that dropped code) might press for expanded voice allocations, thereby alienating the commercial interests more than they already are (and make no mistake, there are many that are *very* alienated *against* amateur radio) and putting even existing allocations in jeopardy.

COMMENT: I think that many U.S. hams, especilly those who have not bothered to read "200 Meters and Down" and "Fifty Years of ARRL," plus wade through some of the WARC proceedings of more recent times, don't have a real appreciation for the struggle that has been on-going since the early part of this century to keep amateur radio in existence. As a result, many U.S. hams see amateur radio as some God-given "right" which no convention, international or not, has any business regulating or controlling.

In fact, amateur radio is no more a "right" than the right to drive a car or fly a plane. It is a privilege, subject to certain restrictions which are intended to ensure that the exercise of the privilege doesn't jeopardize the ability of other interests to likewise utilize the radio spectrum *without interference*. It is necessary that the agreements be established internationally, since radio waves do not stop at the borders between countries.

V. So, why a code test?

I think that the U.S., which has been influenced and prodded by the ARRL over many decades to protect amateur radio frequency allocations, has seen itself as the one country whose role is to set the *standards* which should serve as a model to other countries. Now, make no mistake, some other countries have *stricter* standards than the U.S., but I think the FCC has tried to establish something which seems "reasonable" and has looked to ARRL for guidance, or at least rational input, on this matter.

Regarding the code, I think ARRL sees the dropping of the code requirement as a move which might well alienate a number of other countries, thereby creating discord and breaking the delicate balance which now serves to present a "unified front" at WARCs to protect existing allocations. If the world amateur community ever disintegrates into a bunch of squabbling individual countries each fighting for its own interest instead of protecting the whole (i.e., the amateur frequency allocations worldwide), then amateur radio is doomed. The commercial interests will figuratively wreak slaughter on our allocations, one Region after another, and we will go out of existence.

Again, I may be mistaken, but I think that ARRL sees the unilateral elimination of the code requirement by the U.S. as a step which might lead to very harmful consequences by virtue of creating discord within the worldwide amateur community. Japan's move didn't, but it is the U.S. which, for better or worse, has always held one of the premier leadership positions at these international conferences, and if the U.S. took such a step the danger is that some other countries might follow suit while others would reject the move and the split would become a reality.

Just my opinion.

73,

Paul, K4MSG

2477. Re: Morse Code Practice: Perfection or 70% ?

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-15 16:44:39 UTC

> Should I work on a speed until I get 70% accuracy, then up the tempo a
>couple of notches? Or should I stick with each speed until they are close
>to 100%?
> Something tells me that if all I want to do is pass the exams, the 70%
>rules will work, But if I really want to know the code, I should try for
>close-to-perfect.
> Any help/advice from those you you/us who have already been down this
>path?

Keep pushing up the speed. Practicing at a speed where you can do 100%
copy isn't doing you any good; it's just boring. When you can copy 25 WPM
at 70%, you should be able to do 20 WPM at about 90-95%, and that's good
enough to pass the test, and for most operating other than traffic handling.
Like with any physical conditioning, you have to push a bit harder than is
comfortable to make any progress. And copying a bit over your head forces
you to learn to let go of letters you don't quite get and go on. That's
important, because if you start to think about the letter you missed, you'll
miss the next four or five too. You can usually figure out a single missed
letter later from context, but if you lose a string of letters, you're lost.
(Missing a single number can hose you, but numbers are generally easier to
copy than letters.)

>flexibility but I am still in a fog! HELP PLEASE! FROM A FRUSTRATED WANNA
>BE EX- PACKETEER

Ok, this is easy. *Hack the serial card to use a different IRQ*. Then
tell the software what you did. Since DOS doesn't use the IRQ for LPT1,
you can steal that one for one of your serial ports. If your software
won't let you set COM port addresses and IRQs separately, get or write
better software.

You'll need an amp to get it to speaker level, unless you're talking about
a car stereo EQ.
Sure you can notch! You just have to notch at the freqs the EQ gives you!

I use a Furman Parametric EQ. 3 bands, variable freq and bandwidth, +/-15dB
boost/cut. When I'm not hamming, I use it for EQ'ing stage monitors with
the band.

I agree these texts are required reading, if only to drive home the
fact that governmnet and industry will do what ever the hell they feel
is good for their combined interests and SCREW the common man!

Think Im kidding? Look at the rush to put stations "below 200 meters"
Commercial stations had NO RIGHT to that spectrum! They did it quite
illegally! And yet no one was fined or punished! The government just
did another about-face and reallocated ther spectrum according to the
wishes of industry. Simple and straight forward: Government and the
Broadcast/Commercial Radio Industry is filled with SWINE! Cheaters,
liars, and theives! This is the state of government...look at the
mess the 220 allocation went thru as a modern example of this.

> In fact, amateur radio is no more a "right" than the right to

Tell it to those little chicken-shit non-signatories that bombard the
160-80-40-30-20-15 allocations with their peculiar brand of oriental
socialism/communism propaganda. The US could have at any point run the
52s' over there and ruined them...instead we keep feeding these bastards!
WHY? Because our government is SICK and out of touch with what the public
wants done with IT'S MONEY!

Fact is this government (the US) is supposed to be a government of, by and
for the People. If they are not serving our wishes, let us simply vote in
some representation that is bound by contract to serve us, in the manner
we see fit, and not according to their dirty dealings with a spectrum-

greedy industry thast is no friend to the Amateur..failing that, there
is always our right to "alter or abolish"...

Right. It's all a matter of your attitude and how you handle the situation.
As has been pointed out before, this can (MUST) be an active strength of
the Amateur Service.

When this string started, my first thoughts were "yeah, I've seen that too".
"What an idiot", and "Boy, things sure are going down hill".

The example that came to mind was talking an apparently new ham out of using
a lamp dimmer, set on low, to run his HT. Honest. I think I succeeded
(although I haven't heard him on the air recently :-)), but my attitude in
doing so probably wasn't as helpful and patient as it could have been.

I'd even go so far as to suggest that if ham radio goes the way of CB, *we* are
to blame for not taking the time to help. Thanks go to the original poster
for, in a round-about way, reminding us of our duty.

Your antenna may have survived because of the signal loss in the RG-58. At
20 MHz, the loss should be about 2 db in 50', which would bring the power
at the antenna down to about what the maximum for that antenna.

I heard that there might be a schematic floating around that will allow you to convert a modem into a TNC. Does such a thing exist? I'm just starting to get into Packet and I'm about to come into about 6 Hayes 1200 Bd Modems (internal) , and a couple of 2400 modems. and this would be an interesting project to work on, not to mention saving me much $$.

If there's any good reference material on this subject could someone point the way?

Thanks

If you want an interesting contest exchange, work the European DX contest. You get to send QTC's, which are times and calls of previous stations worked in the contest. It can get very interesting.

SB DX @ ALLBBS $OPDX.182
Ohio/Penn DX Bulletin No. 182

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 182
BID: $OPDX.182
November 14, 1994
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WM2C, ND3A, WX3N, KD4ND, K4CEF & the Southeastern Cluster Group, N8HTT, K8UNP, K8MFO, WD8LLD, WD8NSD, DL5EBE, F6AJA, JAPAN DX NEWS, JE1JKL, ON6TT and VE1UK for the following DX information.

9M6, EAST MALAYSIA. Saty, JE1JKL will be active as 9M6NA for CQWW CW Contest on 20 meters single band. QSL to JE1JKL. Although he prefers exchanging QSLs via the bureau, please note that his home address has been changed recently if you want a QSL direct. The new address is: Saty Nakamura, 1-27-2, Kamiya, Ushiku, Ibaraki, 300-12 JAPAN.

A2, BOTSWANA. Dave, A22MN, says he will be operating 160 meters starting at 0300Z (November 14th) on 1827-1828 kHz. He will start on 160, then as propagation permits he will move to 80 meters (3511 Khz), then to 40 meters (no frequency mentioned). He plans to run this operating schedule for one week, then this schedule will be run every other week due to his work schedule (one week on and one week off). Dave will be leaving A2-land in mid to late March 1995. Then he is off to Helsinki for 4 years. Also, he said that ARRL CW weekend will probably be his last contest from A2.

C6, BAHAMAS. Operators WS4E, K0PP, KE7X, NF6S, and WM2C will sign C6AHX as a Multi/Single entry during the CQWW CW Contest. The group will be operating from Treasure Cay, and will have 3 stations plus lots of antennas set up. Before the contest they will operate mainly on CW, and on the high and low ends of the spectrum on 160, 80, (at EU sunrise, and local sunrise) and 10 meters, checking propagation and antenna performance. QSLs for C6AHX go to WA4WTG, and directly to the individual operators CBA or proper W-bureau outside the contest.

CR3/CT3, MADEIRA ISLANDS. Dominik, DL5EBE (DX-editor of CQ DL), along with DL2HYH, HB9CRV and a few others will be on Madeira island from November 25th until December 1st. They will be active during the CQWW CW Contest as CR3U (DL2HYH, 15m), CR3X (DL5EBE, 40m) and CT3FN (HB9CRV,

80m) each in single op/single band class. The DL's will be signing CT3/homecall before and after the contest on all bands including some RTTY, AMTOR, PACTOR. QSLs will be via their homecalls.

FK, NEW CALEDONIA. Serge, F6AUS, will be active as FK/F6AUS from November 17th to December 8th. He hopes to be active from Loyalty Islands (IOTA OC-033), from Huon Island (IOTA OC-058) and Belep (IOTA OC-079). He will operate on all bands CW and SSB, but watch on IOTA frequency.

FR/G, GLORIOSO ISLAND. Jacques, FR5ZU, will be active as FR5ZU/G from November 17th to December 8th. Look for him to show up on some of the French DX nets. QSL for Asia via JA8FCG and for America/Europe via VE2NW.

OT, BELGIUM. ON4WW/Mark, ON4UN/John, ON6TT/Peter, DK7PE/Rudi, DL1VJ/Bernd, RA3AUU/Harry, DL1SBR/Frank, and DJ4AX/Klaus, will be active as OT4T in a Belgian Multi/Single entry in the CQWW CW Contest. The group will be operating from ON4UN's QTH. A colored picture QSL card will be available via ON4UN (through the bureau or direct).

S7, SEYCHELLES. A group of JA operators will be active from November 21-25th, using the following callsigns: S79CC (JI1NJC), S79SS (JN1GYA), S79TR (JN1BMX) and S79XE (JA5VBH). Activity will be on 160-10 meters, AO-13B, CW, SSB and RTTY. On 160 check 1824+-/1910+- and on AO-13B check 145.885+-. QSL via JI1NJC direct or via the bureau.

T32, EASTERN KIRIBATI. A group of JA operators will be active from here December 27, 1994 to January 2, 1995. Their possible callsigns may be: T32J (JR5JAQ), T32A (JA5EXW), T32Q (JR4QZH), T32X (JA4GXS) and T32O (JF4LNO YL). Activity will be on 160-6 meters CW/SSB/RTTY and there may be a possibility of satellite operations. QSL via their homecall: Masanobu Yamao/JA5JAQ, 222-44 Higasikakioi-cyo, Matsuyama-city, Ehime, Japan 791, Tsutomu Saiki/JA5EXW, 1663 Kitaumemoto, Matsuyama-city, Ehime,Japan 791-02, Shigeru Ueda/JR4QZH, 3-54-4-5 Nakano, Aki-ku, Hiroshima-city, Hiroshima, Japan 739-02, Kenji Sasaki/JA4GXS, 2-15 Ishikannon-cyo, Yamaguchi-city, Yamaguchi, Japan 753 and Masayo Sasaki/JR4LNO (YL op) same as JA4GXS QTH. Jack, KD4ND, will be traveling to Christmas Island on the 3rd of December for a bonefishing edpedition. He has applied for a license and Jack feels his callsign will be T32ND. During his 10 days stay. he will try to be active on all bands, mostly on SSB with some CW operations.

V4, ST. KITTS AND NEVIS. John/WZ8D and Joe/WB8GEX will be operating on all bands 160-6 meters CW and SSB, from November 19-27th. Their calls will be V47WZ and V47NF, respectively. They will be leaving a 3.5 watt 6-meter beacon donated by WA8R. It will be on 50055.5 kHz with a dipole at 1580 ft ASL. The beacon's callsign will be V44K.

VE0, CANADA (RARE PREFIX!). For WPX and Canadian Award hunters, the relatively rare VE0 prefix will be activated November 14-29th. Paul, VE1UK, will be signing VE0UK onboard an oceanographic research vessel during this time. He will be on all bands, 80, 40, 20, 17, 15, 12 and 10 meters, SSB only. QSL to VE1UK, 1994 callbook address.

VP2E, ANGUILLA. Operators from the Potomac Valley Radio Club (Brian/ND3F, Barry/WR3Z and Rob/ND3A) will be operating as a Multi/Multi entry during the CQWW CW Contest. They will be using the callsign VP2EZA during the contest. During non-contest periods, they will be operating on 10-160 meters CW and SSB using VP2E/homecall. QSL VP2EZA via ND3A and the other calls via the respective operator. DO NOT QSL TO THE VP2E BUREAU!

VP5, TURKS AND CAICOS ISLANDS. K8MFO, WD8AUB, W9VNE, W6RGG, WA4DRU, WT8N, W0CG, and WD8LLD will be active in the CQWW CW Contest as a Multi/Multi entry signing VP5VW. The group will be operating from the QTH of Jody, VP5JM. The operation is a tribute to longtime friend Hal Brooks, W9VW who passed away two years ago. WT8N, WD8LLD, W9VNE, and K8MFO wil share the low band duties while W6RGG, WD8AUB, WA4DRU, and W0CG will tackle the high bands. Outside the contest, each operator will be signing VP5/(his homecall). QSL cards for VP5VW go to W8TPS and QSLs for the individual contacts outside the contest go to the operator's home call. They will be active as early as November 20th.

VR2/VS6, HONG KONG. Dave, WX3N, will be returning to VS6WO's QTH for two weeks (between November 22nd and December 3). He plans to operate 80/160 meters each day starting at 1030z and continue through the Hong Kong night. On 80 he will choose from one of three frequencies to transmit on: 3.501, 3.507, or 3.513. David states that past experience shows that the eastern NA stations will have from 10 to 30 minutes to get through at sunrise. Additionally, he will simultaneously operate on 160 on 1824 or 1833 kHz. Look for VR2/WX3N outside CQWW CW Contest (he will be listening up 1 to 2 KHz above transmit frequency). For CQWW CW Contest, he will operate VS6WO Single/Op.

ZB2, GIBRALTER. Jorma/OH2KI and Peter/K8UNP will be active in the CQWW CW Contest. Jorma will operate Single Band 80 Meter CW in the contest using the call ZB2X. QSL to OH2KI. Peter will be operating as ZB2/K8UNP or K8UNP/ZB2 (depending on how they assign the call). Peter will be single op on 10, 15, or 20 meters (depending on the band conditions and when he can operate when Jorma is off the air). QSL to K8UNP.

DXAC/DXCC ACTIVITIES. DXAC members have recently received a petition for separate country status for the Kingdom of Mustang. The Kingdom is a small area bordered by Tibet and Nepal (coordinates are 29.10 N and 83.55 E). The Kingdom of Mustang was once a part of Tibet, but was ceded to Nepal from China. It has retained its Tibetan culture and is OFF LIMITS to foreigners (EXPLORER CD). The petition states the Kingdom of Mustang has autonomy, has an independent political organization and its borders are recognized by other countries. The petition was filed by WA2FIJ and N0AFW. The DXAC will be voting on three issues later in the month: 1) The DXCC country status of Austral Islands and Marquesas Islands, 2) The DXCC country status of Ballent Islands and 3) The establishment of a DXCC Award for Mobile Operation.

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

2497. ARRL Phone Sweepstakes

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-15 22:15:19 UTC
From: jimkd0av@aol.com
Message-ID: <3abbtn$9dh@newsbf01.news.aol.com>
Source record: 256758

This coming weekend, starting at 1900 utc, is the phone portion of the ARRL Sweepstakes. Contest is 30 hrs long and you can work up to 24 hours with 30 min or more breaks. US to US contacts with exchange as follows:
Serial #: number of qso beginning with 1
Power: Q for less than 5 watts
A less than 100 watts
B more than 100 watts
Ur Call
Check: year u were first licensed
Qth: ARRL Section

Should be a lot of activity. If 10 meters is open, hope novices and tech plus get on to liven it up. Can earn a pin from ARRL for 100 contacts.

73 and GL,
Jim KD0AV

gregory brown (gbrown@unlinfo.unl.edu) wrote:
: Gary Coffman (gary@ke4zv.atl.ga.us) wrote:
: : In article <784559614snz@microvst.demon.co.uk> tgold@microvst.demon.co.uk writes:

: : >Perhaps as an alternative, for those with material physical problems,
: : >a written paper on number theory or even on cuniform literature could
: : >be offered. Just make sure that those who want to get the ticket prove
: : >that they REALLY want it and are willing to work for it!

: : Ah, the *effort* theory of licensing. It doesn't matter whether the
: : knowledge demonstrated is in any way relevant to the basis and purpose
: : of the service, or to the national goals set forth in the Communications
: : Act of 1934, or Part 97, just make them do menial rote work, IE *haze*
: : them, before granting a license. If this worked, college fraternities
: : would be models of decorum. Guess what, they aren't. Instead they are
: : often mean spirited narrow minded little cliques with an unwarranted
: : superior attitude.
: : Gary

: Geez, more of Gary's confounding logic:
: "Effort equals hazing equals fraternities equals narrow minded little
: cliques, therefore requiring effort to gain Amateur Radio priveleges
: is wrong."

No, for the logically impaired let me explain....

Effort unrelated to the gain is hazing plain and simple, Thus mandating
CW proficiency to gain access to ALL HF modes and frequencies serves
only as a hazing element. If you confine the CW requirement to CW only
authorization (i.e. you pass the theory and can operate HF SSB but not
CW, then none of us would care because the test requirement at least
relates to what you are gaining a privaledge for).

: Gary, do you really think people don't take more pride in things they
: gain with effort than in things they gain without???

If and only if the gain is related to the effort...see above.

: You think hams
: are (generally) well behaved because they know a little electronics, a
: few regs, or even Morse Code? Nope. There are two reasons hams are
: (generally) good and responsible operators: First, most of the
: Amateur community sets a good example for new hams;

Sounds OK....
: Second, people
: take pride in their achievements. They work hard for the priveleges

: their license grants. Pride fosters mutual respect.

But your assumption that any lowering or elimination of CW testing
means that people won't take pride in passing the theory
requirments is totally unfounded. Your assumption here is that ONLY the
testing for and passing a CW requirment will foster pride in new hams.
That's pure bunk.

: Fortunately, the things we are asked to work hard on...theory,
: practice, regulations...are relevant and beneficial to Amateur Radio.
: Actually, requiring advanced number theory or cuneiform literature
: (though suggested in jest) would probably have the same effect. And,
: heck, since everyone is so super-consciencious, they'd surely just go
: ahead and learn everything they really need to know on their own
: anyway, right Gary?
: Greg
: WB0RTK
: Proud member of the Amateur Radio Fraternity

Yet none of what you mention in this last paragraph ... theory,
practice, regulations constitute the same pass/fail roadblock
that the CW test element serves as. Frankly, those that
are so dead set on CW testing I think have an absolute fear that CW will
die on
the vine unless people are forced to learn CW. Personnally, I
think CW will be around a long time even without CW testing. Given
a future of no-code HF and/or 5wpm for all HF then those that aspire
to advanced CW speeds will do it, those that don't won't and the ham
bands will be no different.

I've said before, let's dedicate the first 25 or 50KHz of every ham band
for CW only. I don't care if that'd get the issue off the dime.

I checked all my references, one of which goes back to 1944, and found no exclamation point. The "Callbook" telegraph code table (1993) says "none at present". The character di dah dit dit dit is generally sent to mean "standby".

In a previous article, amn1@cornell.edu (Alex Nemeth) says:

>I heard that there might be a schematic floating around that will allow
>you to convert a modem into a TNC. Does such a thing exist? I'm just
>starting to get into Packet and I'm about to come into about 6 Hayes 1200
>Bd Modems (internal) , and a couple of 2400 modems. and this would be
>an interesting project to work on, not to mention saving me much $$.
>
>If there's any good reference material on this subject could someone
>point the way?
>
>
>Thanks
>
>Alex

The "Packet Perspectives" column by Stan Horzepa in the current
(November,1994 p.110) QST addresses this question. In a nutshell, the
answer is, yes,maybe, but not worth the time and effort involved.

2501. IPS Daily Report - 15 November 94

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-15 23:09:07 UTC
From: rwc@flare.syd.ips.oz.au
Message-ID: <1994Nov15.230907.2437@ips.oz.au>
Source record: 256768
Cross-posted to: aus.radio,ips.solar.activity,rec.radio.amateur.misc,rec.radio.info

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 15/2330Z NOVEMBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 15 NOVEMBER AND FORECAST FOR 16 NOVEMBER - 18 NOVEMBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 79/19

GOES satellite data for 14 Nov
Daily Proton Fluence >1 MeV: 5.1E+05
Daily Proton Fluence >10 MeV: 1.1E+04
Daily Electron Fluence >2 MeV: 1.0E+07 (normal)
X-ray background: A2.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
16 Nov 17 Nov 18 Nov
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 16 Nov: 80/20

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 14 Nov
Learmonth 9 2222 3232
Fredericksburg 8 8
Planetary 8 8

Observed Kp for 14 Nov: 2213 2223
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
16 Nov 9 Quiet to unsettled
17 Nov 9 Quiet to unsettled
18 Nov 9 Quiet to unsettled
COMMENT: On the last two solar rotations activity is noted for the
18-20 Nov. The previous activity was due to disapearing filament &
flare activity, no warning will be issued at this time.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
15 Nov normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
16 Nov normal normal fair
17 Nov normal normal fair
18 Nov normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
15 Nov 45 about 10% above predicted monthly values. Sporadic E
may have caused degraded conditions 0-5UT and 8-15UT at low-mid
latitudes.

Predicted Monthly T-index for November: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
16 Nov 30 About 10% above predicted monthly values, sporadic E
likely.
17 Nov 30 About 10% above predicted monthly values
18 Nov 30 Near predicted monthly values

>>
>>Help needed on solving the problem of multiple serial port connections. My

>
>Ok, this is easy. *Hack the serial card to use a different IRQ*. Then

Ok, Gary so it's easy for you but for the unwashed masses, what do you mean by *hack the serial . . .* I'm game to try but not sure where to start. Any suggestions?

That's not fair, I know, because you can't see my system and don't know anything about my setup but I, like ABLACKBELT would love to do exactly what you say is possible. I have spoken to a couple of comp service guys and I even suggested something like you say in your message but they were less than positive and conversely I have never been successful in getting it to work.Would a step-bystep be available from you/someone who's done it? The only success story I've heard is one of the multiport hardware upgrades . . . more than I want to spend just to let my software turn the radio knobs.

Thanks for saying it is possible.
Tony

Message-ID: <CzC6CE.I26@eskimo.com>
Source record: 256630

<3a68oj$3gb@news.ysu.edu> <FAUNT.94Nov13201913@netcom2.netcom.com>
Organization: Eskimo North (206) For-Ever

An accepted method for providing emphasis in CW transmissions is to send the emphasized word(s) at a slower speed, typically half to 3/4 of the speed of the rest of the transmission. This requires either a button switch (or similar scheme) to slow the keyer clock or, more commonly, by having a straight key in parallel with the keyer, or if using a bug then you are all set. This probably originated with bug users.
-
Not exactly an exclamation point but gets the job done and makes a beautiful/powerful transmission when properly executed.

2506. Message delivery delay

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-16 01:22:38 UTC
From: Mailer@nuwc-lll.navy.mil
Message-ID: <199411160126.RAA18935@ucsd.edu>
Source record: 256775

Your mail has not yet been delivered. This message is sent to only
inform you of the delay in delivery. No further action is needed by
you.

Pony Express will continue trying to deliver your message for 71 more
hours, and will generate more reports like this one if delivery is
still unsuccessful.

You can examine the reason listed below for the delivery failure and
perhaps inform your local mail administrator if it points to something
unusual or unexpected.

The affected mail recipient(s):

NFUNAMURA @ NUWCDETPO.NAVY.MIL

Reason for the delay/failure is:

Error occurred before attempt to open network connection
during delivery to host NUWCHIGATE.NAVY.MIL (forwarder for domain nuwcdetpo.navy.mil):
Unable to connect to host NUWCHIGATE.NAVY.MIL (Connection refused)

The first 10 lines of the message follow:

You must have trivially-easy multi-choice questions over there. Here,
you are faced with four answers, one of which is typically obviously
wrong, and the other three all look correct. Pick one at random, and
you'll fail - our pass requirement is 75%.

The consensus here is that the multi-choice exam is much more difficult
than the earlier essay-type, whuch you could easily waffle/bullshit your
way through.

2513. Re: non-sovereign DXCC 'countries'

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-16 02:43:47 UTC
From: kaul@netcom.com
Message-ID: <kaulCzCA8z.3LI@netcom.com>
Source record: 256641

There are three or four points which define ''countries'' --- something that might not be a country under part 1, is defined as a country under part 2 or 3, etc.
Therefore, and this is from memory:
If I remember correctly, Sable Island is a country because it is administered by the Canadian Coast Guard which is different from the government which administers the rest of Canada(!!!)

Catalina is not a country because it is within the territorial waters of the USA and a part of California as defined by the DXAC rules (unlike Hawaii which is far enough away, and isn't a part of California).

Sicily I'm not sure about, but since it probably is administered differently from the rest of Italy, it may qualify as a separate country.

The DXAC sets the rules, whether they be separated from the home country by a certain number of miles, or whether there is an intervening country between two parts of the same country (for example which was how Penguin Island was defined as a country [zs0] because Namibia was located between Penguing Island and the rest of S Africa --- but once S Africa ceded Penguin Island to Namibia, it was no longer eligible for separate country status because there was no longer an intervening country between Namibia and it's nearby offshore island).

There is one consistency for DXCC criteria : confusion!! Why one is and the other isn't is always confusing to me.

Good luck in sorting it out.

Thanks. Sorry Zack, you misunderstood my problem with "dumb" questions.
I don't mind dumb questions from "dumb" people. (I.e., inexperienced)
I certainly do mind dumb questions from people that have a piece of paper
that says they should know.

And I do Elmer people. Lots of them. On line, on the phone, on the radio
and in person. It's a lot more productive than complaining about the mens
rooms in Hawaii, or bitching about code vs no-code.

2515. Hams on Bicycles! Info about BMHA

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-16 05:17:10 UTC
From: wday@dfw.net
Message-ID: <wday-1511942317100001@pt4.dfw.net>
Source record: 256650

There is an organization for ham radio operators who are also bicyclists, the Bicycle Mobile Hams of America. This file will tell you a little bit about the BMHA.

From the BMHA Newsletter:

"BMHA got is start when a "Stray" in the June 1989 QST magazine asked to "get in touch with hams who operate their radios while bicycle-mobile, or while in any other human-powered conveyance," signed by Hartley Alley, NA0A. Twenty five hams responded, filled out questionnaires, and received a summary of the collected data.

"In April of '90, we had our first BMHA Forum at the Dayton HamVention. We played to a packed house, overflowed the room, and added 54 names to our mailing list. Our three subsequent forums have drawn increasingly larger audiences, and now BMHA is established as a 'regular' at this world-renowned event.

The BMHA is governed by a board of directors, led by the Chairman and Founder, NA0A, who also edits the quarterly newsletter. Membership is available for $10/year (US) or $15/year (Canada/DX). Family membership of two or more hams is also available for $15/year. The newsletter is published in January, April, July and October.

BMHA conducts an on-the-air network on the 1st and 3rd Sunday of each month. The frequency is 14.253 (+/- QRM) and the early session is at 1800 UTC while the regular session begins at 0000 UTC (Monday morning UTC).

A sample of the BMHA newsletter is available for an SASE.

The address is:

Bicycle Mobile Hams of America
P O Box 4009
Boulder CO 80306

(303) 494-6559

Back issues of the newsletter are available for $1.75 each. Inquire about the availability when you ask for your sample newsletter.

73 and hope to hear you on the air

Gary is forever talking about the brain damage and such that results from CW. Sometimes he remembers to toss in a smiley, but he most assuredly lets it be known that he thinks that learning the code is a senseless, if not actually damaging thing to do. I'm not interpreting, it's all there for anyone to read.

Having said this, I'll also say that I find those who oppose the testing requirement *and* effort to learn the code more believable than those who profess to love the code and hate the requirement.

How can you seperate a knowledge of electronics from ham radio? Isn't
that dangerous considering the voltages and RF levels we work with?

And no one is kept away from being a ham - a few weeks to a couple
of months of study is all that's needed to learn the prerequisite
information (and much less time if one just memorizes the answers,
which I don't condone).

Which just goes to show that anyone can learn code. But the NAL's
you speak of are not being given out to CW operators. I honestly
cannot recall ever hearing of a violation notice issued to someone
due to a regulation infraction while that operator was using CW.
I've been reading QST since 1968 and have seen plenty of notices
posted but none given to a CW op. Can you cite just one case?

Geeze Gary,

Is there anything that you DON"T know something about? This is amazing!

Yeah, it would be nice to buy some Harris or ITC or some other commercial gear to use on amateur television. However, this is a hobby, and we hams are cheap folks, and we use cheap ham equipment most of the time.

I suggest that you take an AEA VSB saw filtered transmitter and put it behind a Mirage amplifier and look at the output on your spectrum

analyzer. Have you ever tried this? I challenge you to try it and then tell me all about the wonderful AEA transmitter. I mention the Mirage, since they seem to be about the only large company doing any sort of advertising of their amplifiers that are specifically designed to work with ATV. Yes, I do know there are others, Pauldon, Down East, etc., however most of the ATV'ers around here use the Mirage for 420 ATV.

I'll bet that you will find that the LSB has been re-inserted during the amplification stage. Now, I won't go into why that happened. Perhaps it was the cheap amplifier that wasn't as linear as we were led to believe, or perhaps it was the wonderful AEA transmitter that did not have the LSB rolled off as much as they would like for us to have believed. I don't know what the reason really is, all I can tell you is that it happens!

Are you saying that Harris and the other TV big boys are not using any filtering after amplification of their signals? I really sort of doubt that.

Since you are going to bash PC Electronics for manufacturing and selling AM ATV Transmitters, perhaps you should also mention the others. Let's see here.. there is Pauldon, Wyman Research, ATV World, HF Technology, and a few others that I can't think of right now.

Since we amateurs are basically cheap folks that spend as little money as possible on our hobby, we tend to use amateur transmitters and amplifiers, not Harris or other commercial equipment.

Since at present, all of the amateur television transmitters built for 420 Mhz are DSB AM transmitters, then I guess we have to face real life. The VSB filter is an option to the ATV transmitter that is available through several manufacturers of amateur radio equipment. Whether the ATV operator chooses to spend the extra money to put the filter behind his transmitter/amplifier is another question. I find that most folks do not spend the extra bucks for the filter. Yep, amateur radio is a tough cruel hobby, but somebody has to do it.

I have a great idea. Since there are no amateur VSB ATV transmitters being currently produced, and since the current models of DSB AM ATV transmitters are such spectrum hogs, and since all hams are cheap and do not waste money on a VSB filter, then how about you and I go into business together. I know from reading all your postings here that you have the brains. You design a cheap low cost amateur VSB ATV transmitter, we will get together on the circuit board design and packaging, and we will market the silly things. Just remember now, since all hams are basically cheap, we need to be very competitive, and keep the price below say $200 for about a 10 watt output unit. We need one for both the 420 band and the 1200 band. Man just think, we could make a fortune. We could really clean up! Heck, in no time, you would want to quit your destructive job, and go into this constructive job full time! Oh, by the way, while we are at it, we need to design and market a few amplifiers for the transmitters. They will need to be very linear

so that the cheap hams won't have to buy any VSB filters. Let's see, we could make one that amplified our 10 watt transmitters up to about 100 watts. That should do it, and keeping in the competitive spirit of amateur radio, let's sell the amps for about $120 bucks.

What do you say? Please let me know, you have me very excited now.

Here is the info:
The original PC specification had two com ports, addressed as 3F8 and 2F8.
It had one parallel porg addressed as 3BC(on the mono card).
The interrupts were 4 and 3 and 7 respectively. Those days are passed us but the legacy and its problems remain.

Now...

Most of the problems with COM ports are not the addresses but the interrupts. And most COM cards these days come with jumpers which can specific interrupts other than 3 or 4. My modem card gives me the option of IRPT 2, 3, 4 or 5. My setup is COM1 (3F8, IRP 4), COM2 (2F8, IRP 3), COM4 (2E8, IRP 5) and a modern mouse (no address needed using IRP 2).

In order to solve your problem do the following:
get a parrellel mouse, or get a VGA card with mouse port (I use the ATI Graphics Super VGA with mouse),
connect your TNC to COM1, your RIG to COM2, and get a modem for COM3 or COM 4.

Of course if you had an IBM PS/2 with MCA bus, this problem wouldnt be there (you get 8 COM ports with no interrtupt conficts!).

: 240v on my hair dryer, toaster, small power tools, etc.

You learn to live with it. Here in Scotland (240v 50Hz, Neutral at ground potential) the population has lived with it for long enough for everyone to know to be very careful. Standards of equipment and wiring are somewhat tougher than in the US. Electrocution at 240v is a pretty uncommon event. I've had the occasional nasty surprise, but not many. Most cases I've heard of in the past while has been fools climbing 11kV 33kV etc power poles and EHV pylons or touching them with conducting things.

It is usual for professional portable power tools to be powered via a safety transformer giving 110v output, centre-tap grounded.

To someone used to our gross-overkill standards (could I have chosen a better adjective?) a lot of US electrical fittings look frightening.

I shaved off 240v this morning,

No, you're not alone.

Someone gave me a disc with the set of US examination questions, and an examination generator programme. I tried it out at the weekend. I had no problem withantennae, interference, calculations and other technical matters, but some of the questions surprised me. There seemed to be a lot of questions not really related to radio technology and the proper operation of a station. Questions about how many days must a VE have to send in the paperwork, about who can be a VE. About what a VE must do if an examinee is unruly, about who created the question pool, about who makes up exams from the question pool.

The US system of incentive licencing seems artificial and unnecessary to many of us in other countries, so I'd add in all the questions about where the "priviledged" sub bands are.

Apart from the nuisance of memorising a fair amount of admin-trivia, the US licence looks a bit of a walkover. 20 wpm and a multiple choice quiz seems unfrightening compared to 12wpm for 3 minutes with no more than 5 letters wrong.

Some of the calculation and antenna questions looked reasonable, I must say, though.

Perhaps amateur radio is entering a similar phase to motoring where a significant proportion of motorists don't know where the jack is in their car, when not too long ago many could even dry a wet ignition system with a piece of rag!

Cheers
David GM4ZNX

>- Rich

Yep, I use an old 60W iron, never had much trouble with it. I pick up good connectors at local ham fleas. Look for name brands like Amphenol, Kings, etc. Don't buy the nickel plated no-name junk that everybody sells cheap. As some of you have found, the plating won't accept solder.

One trick I use is to lay the tip of the iron flat against the connector, then rock it up on its point a little, just enough to poke some thin solder under it. A little blob of molten solder under there makes a much better thermal connection than a dry iron... Resume soldering as normal.

: >their license grants. Pride fosters mutual respect.

: I agree that people take pride in their achievements. Where we part
: company is that you think passing a test is the end all and be all
: of achievement while I don't. I think people take pride in what they
: do *every day*, not in what they did once upon a time in front of a
: government agent. Only people who are very insecure need a piece of
: paper from an authority to validate their self-image.

: Gary
: --

Two points, then I'll let it rest. First, I do not believe that passing the test is any kind of end-all and be-all of achievement. The written and the code tests are just starting points...intended to show an introductory understanding of the topic.

Second, your "hazing" theory only holds water IF ONE ACCEPTS YOUR PREMISE that the code requirement is an "irrelevant hurdle". As a matter of fact, all your arguments assume this to be true, or in some way or other try to prove it true. All of my arguments, on the other hand, are based upon the premise that it is NOT irrelevant. Given the diametrically opposed starting points we each hold (as may be typical of the pro- anti-code testing folks as a whole) we are wasting a lot of time arguing about all this. You've spent a lot of time trying to point out how archaic and obsolete Morse is as a mode; I've spent some time trying to point out the opposite. You have not come close to persuading me, and I'm pretty sure from your posts that you are pretty unimpressed with mine.

I'm ready to give the whole discussion a rest. I think I'll spend some more time on the radio...working some DX, contesting, collecting QSL cards, and maybe even sending for a few operating achievement awards! (A list of interests I _know_ you really enjoy :-) Ha, ha!

>mean by *hack the serial . . .* I'm game to try but not sure where to
>start. Any suggestions?

Ok, no problem. Each IRQ is a separate line on the ISA bus. All you have to do is cut the trace on your serial card going from the SIO to the current IRQ pin and solder a jumper over to the pin for the IRQ you want to use instead. Some cards have jumper plugs to let you do this so you don't have to cut and paste, but those that don't have the jumper plugs can still be changed by Exacto knife and soldering iron. The IBM Technical Reference (as well as most other PC hardware reference books) lists all the ISA pins, and has a chart of which IRQ is normally assigned to what device. As I mentioned, DOS doesn't use the IRQ for the LPT device, so you can grab that with no problem. You can also grab IRQ2, but you've got to tell the software you're using IRQ9 because of a quirk in the PC architecture.

Note: some really cheap cards don't plate all the connector fingers on the card in order to save a few cents. In those cases you have to get a bit more tricky. You can either run the jumper wire over to a card that *does* have the pin, the parallel port card if that's the IRQ you are grabbing for example, or any other card in the system that has all the pins plated. You can also cut up an old card and extract just the connector stub and put it in an unused slot and run the jumper over to it. This trick is also useful for making an 8 bit card work with the high IRQs in an AT which appear only on the high order connector.

Now on the software side, you have to tell your software what IRQ you are using so it can insert it's ISR vector at the right jump table address in low memory. If your software allows you to do this, NOS, ProComm, and assorted other programs do, then you're done. If your software doesn't allow you to do this, then you have to get a bit tricky. You can write a TSR that will change the ISR vector to the proper jump table address *after* your application loads. Or you can go in and patch the software to put it's ISR vector in the right location.

Gary

: : Fortunately, the things we are asked to work hard on...theory,
: : practice, regulations...are relevant and beneficial to Amateur Radio.
: : Actually, requiring advanced number theory or cuneiform literature
: : (though suggested in jest) would probably have the same effect. And,
: : heck, since everyone is so super-consciencious, they'd surely just go
: : ahead and learn everything they really need to know on their own
: : anyway, right Gary?
: : Greg
: : WB0RTK
: : Proud member of the Amateur Radio Fraternity

: Yet none of what you mention in this last paragraph ... theory,
: practice, regulations constitute the same pass/fail roadblock
: that the CW test element serves as. Frankly, those that
: are so dead set on CW testing I think have an absolute fear that CW will
: die on the vine unless people are forced to learn CW. Personnally, I
: think CW will be around a long time even without CW testing. Given
: a future of no-code HF and/or 5wpm for all HF then those that aspire
: to advanced CW speeds will do it, those that don't won't and the ham
: bands will be no different.

I think you're hung up on this "fear" thing. There are a lot of
reasons people support the code requirement, some good, some bad.
I've never known a CW operator who "feared" that CW would die on the
vine!

Also, the "pass-fail" attribute is really over played. 70% correct
from a multiple choice test based on a rigid form format QSO is hardly
a roadblock. But I digress...

: I've said before, let's dedicate the first 25 or 50KHz of every ham band
: for CW only. I don't care if that'd get the issue off the dime.

Wow! How generous! With the popularity of CW, however, that would
not even come close to handling all the activity! It would be about

like restricting all 2 meter packet activity to one frequency! Now,
if you make that "the first 150 KHz" of each band, maybe I'd take it!
But then again...

By golly, you're right Jeff. I guess we'll just have to restrict
all Extra Class amateurs to manual Morse operations only. Problem
solved.

Gary

2538. Line voltage in Australia

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-16 14:28:57 UTC
From: taylor@tix.timeplex.COM
Message-ID: <9411161428.AA01405@tix.timeplex.com>
Source record: 256760

The line voltage standard, by the way in the US is not 110/220. That was an old defacto standard from the turn of the century. The US standard is 120 to neutral, 240 across the ungrounded feeders on a single phase system. On three phase Y, it is 120 from any phase to ground, and 208 volts between phase leads. Most appliances are rated at 117 volt which is really an ANSI and UL thing, but only an approximation or nominal supply requirement for devices using 120 volts. As far as safety, 120 volts is just as lethal as 240 volts since conditions for dangerous currents are more or less dependent on external factors, like standing in water or wet locations or just simply doing something stupid to ground oneself while handling live conductors. Most consumer electronics these days are either CSA or UL (TUV, BS or others too) approved , and electrocutions are generally not too common.

A friend of mine, about 10 years ago, was using an old electric drill while working on his boat outside. He was electrocuted by the 120 volts, not standing in water since the boat was in dry dock, but because he did something stupid. H e cut the saftey ground prong on the ac plug because he did'nt have a proper extension cord.

>send in the paperwork, about who can be a VE. About what a VE must do if
>an examinee is unruly, about who created the question pool, about who
>makes up exams from the question pool.

For the benefit of hams outside of the US, those questions were (probably) on the Amateur Extra license exam--our highest class of license. While these questions are not that important to operating a station, they are important for being in the VE system. One of the requirements to be able to give all the tests as a VE is to have an Amateur Extra class license. (Some lower class licenses can give some of the tests.)

Because our system of examinations is done on a volunteer basis, there must be some way of making sure the people who are able to become VEs know what they are supposed to do. So, the questions aren't as out of place as you might think...

/\

ADMINISTRATIVE BULLETIN

! VERY IMPORTANT -- READ THOROUGHLY !

/\

The following administrative bulletin is very important and
should be thoroughly read by everyone who is receiving products
provided by the Solar Terrestrial Dispatch.

Contents
========

IMPORTANT NOTICE REGARDING CHANGES IN INTERNET SERVICES
INDIVIDUAL SUBSCRIPTION FEE SCHEDULE
INSTITUTIONAL AND ORGANIZATIONAL SUBSCRIPTIONS

DAILY REPORTS - PRODUCT DESCRIPTIONS
WEEKLY AND MONTHLY REPORTS PRODUCT DESCRIPTIONS
ALERTS AND WARNINGS PRODUCT DESCRIPTIONS

SECOND-HAND SOURCES AND REDISTRIBUTION SITES

SUBSCRIPTION APPLICATION FORMS
FORM FOR INDIVIDUAL SUBSCRIPTIONS
INSTITUTIONAL AND ORGANIZATIONAL SUBSCRIPTION FORM

IMPORTANT NOTICE REGARDING CHANGES IN INTERNET SERVICES:

The Solar Terrestrial Dispatch has, since 1989, provided a full range of
Internet services to the public and scientific communities, including
complete e-mail distribution services of reports, alerts and warnings, as
well as numerous FINGER and FTP services relating to solar and geophysical
events of influence to the Earth and the near-Earth space environment.

Over the years, the demand for these products has increased. Expenses
have also increased accompanied by a corresponding decrease in funding for
almost every year we have provided these services. Another setback in
funding is forseen for the fiscal year of 1995. This unacceptable state of
affairs has forced us to change our policy regarding some of the services we
are providing.

This bulletin is intended to notify those who are receiving our services
of the impending changes which will occur as of 01 January 1995. We regret

having to make these difficult decisions and apologize for the inconvenience it may cause for many of the recipients of our services. These changes will help prevent the termination of these services and will allow us to continue providing all of these services on a timely basis to those who require or are interested in them.

As of 01 January 1995, the following products will only be provided through direct e-mail distribution to those who who have subscribed to the products:

- Daily Summaries of Solar and Geophysical Activity
- Weekly Solar Terrestrial Forecasts and Reviews
- Monthly Solar Reports (see Comment below)
- ALL Warnings and Alerts (flare, proton, satellite, and geomagnetic)
- ALL Auroral Activity Watches and Warnings
- Daily Ionospheric Data Summaries

Comment:
The monthly solar reports were terminated last year due to a lack of funding. However, we will begin releasing these reports again beginning 01 January 1995 but only for those who are interested and subscribe.

All equivalent services provided through FINGER or anonymous FTP will also be limited to those who have subscribed. For example, the finger service to provide the latest daily activity summary will be terminated and the publically accessible placement of these daily reports for anonymous FTP will be limited to those who are subscribed to receive these products. Those who subscribe will have full access to all relavent archived data through anonymous FTP.

Most of our anonymously FTPable services will remain unaffected. These include FTPable solar imagery, solar coronal emission plots (Fe XIV, Fe X and Ca XV lines), pseudo full-disk coronal emission maps (Fe XIV and Ca XV lines), daily solar x-ray plots, daily solar region and coronal hole maps, 3-hourly solar and geophysical indices (via FINGER and FTP), hourly auroral activity sighting reports, and satellite auroral imagery (when available). We will also continue to serve as a relay source for the Big Bear Solar Observatory's BEARALERT's, when issued.

All PACKET-RADIO FORMATTED MATERIAL will continue to be sent to the redistribution sites. These policy changes will not affect the operation of material being sent to the individuals who are serving as redistribution addresses for the packet-radio formatted material.

Individuals who are redistributing copies of our Daily Summary of Solar and Geophysical Activity will need to subscribe to continue receiving these products for redistribution.

INDIVIDUAL SUBSCRIPTION FEE SCHEDULE

Individuals interested in subscribing to any or all of our products should abide by the following subscription fee schedule. Research or

Educational Institutions redistributing our products to more than 2 colleagues, or Commercial Organizations providing our products to more than 2 customers can save money by following the Institutional and Organizational Subscription Fee Schedule given in the next section.

Beginning 01 January 1995, the following fee schedule for Internet e-mail distributed services will apply. These products will only be available through direct e-mail to those who have subscribed:

ALL DAILY PRODUCTS
~~~~~~~~~~~~~~~~~~

YEARLY RPTS SENT PRICE/EACH | QUARTERLY RPTS SENT PRICE/EACH
---------- --------- ---------- | ---------- --------- ----------
$73.00 U.S. 730 10 cents | $35.00 U.S. 180 19 cents
|
(365 solar + 365 ionospheric = 730) | (90 solar + 90 ionospheric = 180)

WEEKLY AND MONTHLY PRODUCTS
~~~~~~~~~~~~~~~~~~~~~~~~~~~

YEARLY RPTS SENT PRICE/EACH | QUARTERLY RPTS SENT PRICE/EACH
---------- --------- ---------- | ---------- --------- ----------
$52.00 U.S. 64 81 cents | $30.00 U.S. 15 $2.00
|
(52 weekly + 12 monthly = 64 total) | (12 weekly + 3 monthly = 15 total)

ALL ALERTS & WARNINGS INCLUDING ALL AURORAL ACTIVITY WATCHES & WARNINGS
~~~~~~

YEARLY RPTS SENT | QUARTERLY RPTS SENT
---------- --------- | ---------- ---------
$40.00 U.S. Unlimited | $25.00 U.S. Unlimited

Providing these direct e-mail services will (for many people) significantly improve delivery times as opposed to receiving them from second-hand sources.

If we are unable to compile and provide a product due to computer or other problems, we will extend subscriptions beyond the given yearly or quarterly periods until the required number of products have been provided to the subscriber. For example, if during the course of a year, only 50 of the 52 required weekly reports are sent, the subscription will be extended until the required 52 weekly reports are sent to the recipient.

All alerts, warnings and auroral activity watches and warnings follow a fixed price schedule. Subscribers to these products will receive an unlimited number of alerts or warnings until the subscription period expires.

We will cooperate with all subscribers to provide any missing or required data that should have been received but was not. Special attention will be given to those who do not have FTP access to such information. In other words, we will e-mail any missing information to recipients if they do not have FTP access to our archives.
~~~~~~

Subscribers may request to be removed from the distribution list of any of the products included in these subscription groups. For example, a subscriber may request to be removed from the daily ionospheric data summary but still continue receiving the daily solar summary. There will be no discounts on overall subscription rates for such requests. Similarly, there will be no refunds if subscribers are unable to maintain network connections for the duration of the subscription period. We will, however, change subscribers e-mail addresses any required number of times to keep in contact with the subscribers during the course of the subscription period.

All subscribers will be registered with us and will qualify to receive discounts on any existing or future software products we provide during the course of the subscription period.

INSTITUTIONAL AND ORGANIZATIONAL SUBSCRIPTIONS

Institutions that are receiving and redistributing our products to more than 2 colleagues, or commercial services that are redistributing our products to more than 2 customers can save money by following this fee schedule.

ALL DAILY PRODUCTS
~~~~~~~~~~~~~~~~~~

YEARLY RPTS SENT	QUARTERLY RPTS SENT
$200.00 U.S. 730	$ 90.00 U.S. 180
(365 solar + 365 ionospheric = 730)	(90 solar + 90 ionospheric = 180)
(redistributed institutionally)	(redistributed institutionally)

WEEKLY AND MONTHLY PRODUCTS
~~~~~~~~~~~~~~~~~~~~~~~~~~

YEARLY RPTS SENT	QUARTERLY RPTS SENT
$130.00 U.S. 64	$ 75.00 U.S. 15
(52 weekly + 12 monthly = 64 total)	(12 weekly + 3 monthly = 15 total)
(redistributed institutionally)	(redistributed institutionally)

ALL ALERTS & WARNINGS INCLUDING ALL AURORAL ACTIVITY WATCHES & WARNINGS
~~~~~~

YEARLY RPTS SENT	QUARTERLY RPTS SENT
$100.00 U.S. Unlimited	$65.00 U.S. Unlimited
(redistributed institutionally)	(redistributed institutionally)

These subscription rates apply for institutions or organizations that forward our products to an UNLIMITED number of interested persons within the institutions or organizations.
~~~~~~

DAILY PRODUCT DESCRIPTIONS

Daily products include the Daily Summaries of Solar and Geophysical Activity and the Daily Summary of Ionospheric Data. The Daily Summary of Ionospheric Data provides important ionospheric indices such as Critical F2-Layer Frequencies, M-factors, Maximum Usable Frequencies, Minimum Usable Frequencies, Critical Sporadic-E Layer Frequencies, Total Electron Content, and reports of anomalous activity such as Short-Wave-Fadeouts [SWF's] or other types of SID's (Sudden Ionospheric Disturbances), anomalous absorption, etc.

Early in 1995, the Daily Summary of Solar and Geophysical Activity will be enhanced to include additional new and updated information, such as three daily 10.7 cm (2800 MHz) solar radiation measurements (instead of only one now presently provided), plots of 60-day energetic electron fluence measurements at greater than 2 MeV for geosynchronous altitudes (providing greater control over determining possible recurrent tendencies in satellite anomalies), daily auroral activity summaries, and other new additions we are considering such as radio propagation forecasts between specific "heavy-trafic" transatlantic, transpacific, and transequatorial points. This will increase the size of the daily summaries somewhat, but will also increase the value of the product.

WEEKLY AND MONTHLY PRODUCT DESCRIPTIONS

The weekly and monthly products include the Weekly Solar Terrestrial Forecast and Review which is prepared every Thursday, and the Monthly Review of Solar and Geophysical Activity which is prepared in the first week of each new month. The Weekly Solar Terrestrial Forecast and Review will (early in 1995) be expanded to include extended forecasts of geomagnetic activity, auroral activity, and High-Frequency (HF) radio propagation conditions for a period of 30 days into the future. As well, new 30-day forecasts of anticipated energetic electron fluence at greater than 2 MeV will be included to aid satellite operators in assessing potential future influences of charged particles in the near-Earth space environment. A synopsis of radio propagation is also being considered for inclusion in this weekly report to aid radio communicators on a band-by-band basis. The Monthly Review of Solar and Geophysical Activity will contain cumulative solar flare reports, summaries of notable active solar regions or coronal holes, coronal hole tracking information based on Yohkoh x-ray imagery and/or Helium 10830A and full-disk magnetogram imagery, current smoothed and semi-final solar and geophysical indices, and solar-cycle progress reports. The Monthly Reports will also frequently contain solar-cycle sunspot number and 10.7 cm solar radio flux projections.

ALERTS AND WARNINGS PRODUCT DESCRIPTIONS

The alerts and warnings will be provided when necessary (and as frequently as necessary) to those who have subscribed to these products. The alerts and warnings include all major solar flare alerts and warnings, all

geomagnetic storm alerts and warnings, all solar proton event or enhancement alerts and warnings, all potential satellite anomaly warnings, and all auroral activity watches and warnings (for middle and low latitude sites).

SECOND-HAND SOURCES AND REDISTRIBUTION SITES

The flow of information to second-hand sources will end on 01 January 1995. Second-hand sources include:

- All listservers.
- All USENET newsgroups.
- All private or commercial Bulletin Board Services (BBS's).
- All FTPable sources.
- Any other source providing this material except those redistributing our packet-radio products to the packet-radio networks.

If you are receiving products from one or more of the above-noted second-hand sources, you will need to subscribe with us by 31 December 1994 in order to continue receiving this material.

SUBSCRIPTION APPLICATION FORMS

To subscribe to one or more of the products, print and fill out the appropriate application form below. Remit the appropriate subscription amount to the "Solar Terrestrial Dispatch" and postal mail it to:

Solar Terrestrial Dispatch
P.O. Box 357
Stirling, Alberta
T0K 2E0
Canada

After we receive your subscription payment, we will add the appropriate e-mail address(es) to our distribution lists and notify you via e-mail of your subscription acceptance.

Aeee is right, this ._... is bar-AS, the standby prosign.

What does it show _..._ to be? An equal sign?

These code program translations are confusing things. The programs aren't printing prosigns in their recognized represention ("bar AS," "bar BT," etc.) A standard based on code program usage would be like an airworthiness certificate based on a consumer flight sim.

>provide a reference for this? I don't have the whole ITU
>regulation package available.

Taking exceptions is grounded in international law. It's common
in many multilateral treaty negotiations, not just the ITU. Other
examples are the whaling commission agreements and the current
GATT treaty. Thus this is a basic "ground rule" for any multilateral
negotiation.

>IV. Japan dropped the code requirement and "the world didn't come
>to an end."
>
> Japan is only one country. However, if a large number of
>countries began dropping the code requirement, the following
>scenarios are at least possible:
>
> (a) commercial interests might "smell" a chance to latch onto
>part of the amateur CW allocations on the premise that occupancy
>would go down since many operators would switch to voice operation
>only;

The *only* Morse-only allocations in the US amateur spectrum are
50.0-50.1 and 144.0-144.1 MHz, neither of which, ironically enough,
requires passing a Morse test to use. All other spectrum where Morse
is commonly used allows modes other than Morse, such as RTTY, AMTOR,
GTOR, PACTOR, Clover, etc. And the US is nearly unique in having mandated
by mode bandplans anyway. Most of the rest of the world operates like
Canada, where any mode is allowed on any amateur frequency subject only
to voluntary "gentlemen's agreements" and bandwidth limits.

And commerical and government interest in MF and HF spectrum is
sharply declining. Most of the non-broadcast commercial users
have already abandoned MF/HF for satellite links, and even SW
broadcasters are planning to switch to direct digital audio
broadcasting via satellites over the next 20 years (that's what
the trade magazines are saying). Far from worrying about poachers,
the ARS has gained 3 new bands at HF (30, 17, 12 meters) from
commercial and government users who have abandoned the spectrum.

Our MF and HF allocations are under no pressure. In fact, we can
expect to be given more "worthless" HF spectrum as other uses decline.

The *entire* VHF TV spectrum is going to come available in the US
in 2008 when the full conversion to HDTV is scheduled to be completed.
While the bulk of that spectrum will be given to land mobile, the FCC
has hinted that there could be some slices for amateurs too.

The only place where amateur spectrum is under serious attack is
in the 1 GHz to 2.5 GHz region where pressure from PCS and DAB
proponents are likely to take that spectrum for commercial uses.
We should view that as a mixed blessing since that's where all
those current SW broadcasters are going to wind up.

> (b) At the next WARC, some of these countries (that dropped
>code) might press for expanded voice allocations, thereby
>alienating the commercial interests more than they already are (and
>make no mistake, there are many that are *very* alienated *against*
>amateur radio) and putting even existing allocations in jeopardy.

Modes aren't allocated internationally. Those are matters left to
national administrations. As I noted, there's only 200 kHz of Morse
only spectrum in current US allocations. Most of the rest of the
world already has voice operations in US amateur non-voice spectrum.
We are almost unique in our complex and barque government mandated
by mode bandplans, and in our barque and complex licensing structure.
I don't know of another country with 6 license classes. Most nations
seem to be intent on simplifying and standardizing amateur licensing
into one or two classes.

I believe the treaty requires only a 'proficiency' in code but doesn't specify a minimum speed. It's up to the individuals countries to determine what that means.

DA>dissapate as I have managed to shock myself days after using the radio. In
DA>addition, this has occurred on both my HW-101s and TS-520. Is the charge ju
DA>a characteristic of the 6146 tubes?

No, it is a characteristic of plate voltage! Keep your fingers out of
there!

DA>I had thought the resistors sitting on
DA>top
DA>were there for the express purpose of bleeding off all charge, but...I still
DA>get the shock...can anyone supply me with some definative info on this
DA>phenomenon?

Sure Dave, the resistors on top of the tubes are actually chokes that
are there to supress self-oscillation in the final amplifier tubes.
They do not bleed off anything. But what does this have to do with
touching the center pin on your coax? Makes no sense to me.
If the antenna is giving you a DC jolt, then you can just put an RF
choke say 2.5 mH across it to ground, inside the transmitter, and that
will remove any DC static charge that is building up on your antenna.
I hope that helps.

2547. The case for SS. (Was Re: Code and International Politics)

>would go down since many operators would switch to voice operation
>only;

Are you saying that is bad?? Let me see if I got this right...

ASSUMING the above is true AND the premise is true, doesn't that
conform to what the majority of radio amateurs want?? So what we
are doing today is to sacrifice the interest of the majority so as
to maintain the CW allocations used by the few??

> (b) At the next WARC, some of these countries (that dropped
>code) might press for expanded voice allocations, thereby
>alienating the commercial interests more than they already are (and
>make no mistake, there are many that are *very* alienated *against*
>amateur radio) and putting even existing allocations in jeopardy.

So the commercial interests and the governments see us a just a bunch
of hobbyists, with no real benefit to the public, and we should
therfore use the simplest methods (CW) so as to occupy a minimum of
band space. I'm not trying to be a smart-ass here, just trying to
understand where you are going.

>COMMENT: I think that many U.S. hams, especilly those who have not
>bothered to read "200 Meters and Down" and "Fifty Years of ARRL,"

>radio in existence. As a result, many U.S. hams see amateur radio
>as some God-given "right" which no convention, international or
>not, has any business regulating or controlling.

Taking a "libertarian" view, I don't see HOW government has
"rights" to something as nebulous a physical phenomenon as
electromagnetic waves! Will they charge us for AIR next??

The PEOPLE should be the government. If that is NOT the case,
government has gotten way to big. OK, OK. I'll stop and
go back to alt.politics.libertarian. I DO recognize
the importance of frequency coordination and spectrum
scarcity if you insist on using narrow-band modulation
techniques.

Well, I can always resort to illegal clandestine work using
HF FH SS. Think of the fun! Think of the challenge!!
NO, that was NOT a joke. Read on, please.

> In fact, amateur radio is no more a "right" than the right to
>drive a car or fly a plane. It is a privilege, subject to certain
>restrictions which are intended to ensure that the exercise of the
>privilege doesn't jeopardize the ability of other interests to
>likewise utilize the radio spectrum *without interference*.

What if we could develop a non-interfering mode? Well it's
here today. AMRAD proved it's viability in the 1980's.
Perhaps we could go beyond narrow-band thinking and explore
SS to a greater extent and really learn what it is capable of
on ALL bands. Too bad the existing regulations do not
allow any really useful experimentation (beyond what has
already been done) and they CERTAINLY do not allow any
practical full-time implementation of SS. NONE is
allowed on HF.

"What?", you say. "Commercial RF is having much
trouble with SS!" Well, they've said that to radio amateurs
before and we've proven them wrong! Let's pick up the ball
and run with it. What do you say, ARRL and FCC??

2549. 9/10kHz step

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-16 16:34:38 UTC
From: gruska@zeus.dcs.fmph.uniba.sk
Message-ID: <CzDCpq.3uM@sk2eu.eunet.sk>
Source record: 256588

Hi there,

I am not sure whether this is the right place where
to send my question put I have not found any better
one.

I am not a radio amateur. I have Aiwa walkman with
PLL synthesized receiver. I like it very much but
there is a problem with the receiver. I can tune it
only with step 10kHz but since I am in Europe I need
9kHz tuning. (for MW) I know that there is also almost the same
Aiwa model except it has 9kHz step tuning. Sine there
is no external switch for changing this step my question
is as follows.

Is it possible that there is a small switch inside
the walkman and it would be worthwhile to open it
and switch it, or the alternative model uses different
chips or so?
I mean could I easy change 10kHz step to 9kHz one?

I expect that would be the case that two USA/Europe
models differ just by a different position of an internal
switch.

Maybe, but I later installed RG-213 and ran the thing that way also. When the
SB-200 was first brought over to my house the seller was there and advised me
to try it out. "Oh No!", I said, " The antenna is not rated for that power and
it is fed with RG-58!". I knew all this, see, because I've been reading this
newsgroup for a long time. But we hooked it up anyway and it worked just fine.
It also worked just fine with the RG-213 and my Johnson Matchbox Jr. worked
just fine also even though its only rated for 250 watts. It also worked just
fine into the Cantenna with a high freq. scope to measure the power and make
sure the junky Heathkit wattmeter wasn't lying.
I will have to say that the TA-32jr is not a good 20 meter antenna. Not a real
bad one, just not a real good antenna. It works a lot better on 10 meters and
15 meters where I used to operate. I once made a backyard comparison
between the TA-32jr and a full size antenna, the TH3DX. Utilizing my portable
antenna trailer with the antenna at 40 feet, I made contacts on the TA-32jr
and then asked the operator to standby while I switched (literally) antennas.
This took about 3-5 minutes. Results seemed to show about a 1/2 S unit
stronger signal with the full size 3 element beam vs. the much smaller TA-32jr.
The S meter was in a TS-430S. I tested this on all 3 bands. Differences
narrowed on the upper bands.
Another test I made in the same manner was to install a W2AU balun at the
feedpoint of the TA-32jr vs. no balun and the ground strap. No difference.
I have since had all the traps in the TA-32jr apart where I found no damage
except spider nests. I cleaned the connections and Penetrox'd everything.
Your milage may vary.

>into one or two classes.

Well, at this point I'll have to "come clean" and apologize, Gary;
I was "baiting" you to see how you'd respond. Your points are all
very well taken, of course, and once again bring up the question of
"Why?" in regard to the International Morse Code requirement in the
U.S. I really don't have a good answer, and a lot of what I posted
represents arguments I've heard used by others. As you pointed out,
the validity of some of them is seriously called into question by
current technological advances and the shift to higher spectrum
by commercial interests.

I think that *historically* the reasoning was that "Well, we
can check out someone's knowledge of proper radiotelephone procedure
on a written exam, plus their knowledge of the technical aspects
and potential problems of all modes (key clicks, over-modulation and
spltter, etc.) in the same way. But the only way to find out if
they can send decent code is to give them a code test."

Never, however, was there a requirement for a *typing* test
for RTTY operators, and perhaps you could make a parallel argument
for that along with a code test, unless you accept the premise that
the code test is merely part of the "filtering" process to establish
who should and should not be "rewarded" with additional privileges.
(or having a license at all).

So, where does this leave us? Who out there can provide the
real answer? Is there a "real" answer?

I'd never heard of this before, and it does sound neat. A very interesting array of responses, if I do say so.

Incidentally, I was taught that using exclamation points was a sign of a "bad writer", but I'm inclined to modify that to "too many exclamation points". I don't like having this piece of punctuation denied to me! And, since morse doesn't distinguish between CAPITALS and lowercase, the exclamation becomes even more useful, no?

I also thought "_ _ _ ." might be a possibility, except that it gets used for funky symbols in several foreign character sets.

>highly site specific, and depends on the dielectric properties of the earth
>on your area, and the height and shape of the terrain between the
>transmitter and receiver.
>

When both transmitting and receiving are close to the ground as in typical
mobile and domestic base stations the 1 / R^2 path loss model fails badly
since it ignores the primary ground reflection which is almost always
present and barely attenuated. When you consider the received wave to be
the sum of the direct and reflected wave you can derive a path loss model
where the received signal strength, Pr = Pt(H1*H2/D^2)^2 where

H1 is the height of one antenna above a flat earth
H2 is the height of the other antenna
D is the distance between the two stations in the same units as H.

The above expression is independent of frequency and shows the received
power to fall of at a rate of 40 db per decade in distance as opposed to
20 db per decade in the free space case. The received signal strength
increases at a rate of 20 db per decade in the height of either antenna
over the useful range of the model. The model is good when the ground
is considered smooth for the wavelength in question and the path nearly
grazing, which is the typical mobile to mobile case. The flat, perfectly
reflecting ground is a remarkably good model and will generally give a
much better prediction of mobile range than the free space model. In

practice, somewhere in between is what will actually happen with the upper limit being approximately 6 db stronger than the free space case and the lower limit the above described case. Fading effects tend to be between the above limits but only 'most' of the time.

The above model says 10 db increase in gain will increase the range by the fourth root of 10 which is 1.78, or a 78 percent increase in range.

Just to add additional confusion into the frackus :-)

Feel free to email me for additonal discussion.

Sorry, any resitors sitting on top of the tubes are just there to suppress
parasitic oscillations.

There are bleeder resistors near the power rectifiers, but they may decay
the voltage at a faily sedate rate.

There SHOULD be a nice capacitor between you and the B+. I suggest that
someone puts a voltmeter on the inner of the co-ax connector and checks
it real soon. Someone else may get that shock and be better grounded
than you!

Maybe "pass-fail" is overstating it, but morse code still holds a
position in the exam system that no other mode comes close to matching.
It is the only mode (I believe, since I haven't actually counted all the
questions on the different modes) that you cannot miss *everything*
about and still work HF. This *is* a roadblock, although not as big a
one as if it was solid copy of random letters.

>Wow! How generous! With the popularity of CW, however, that would

>like restricting all 2 meter packet activity to one frequency! Now,
>if you make that "the first 150 KHz" of each band, maybe I'd take it!
>But then again...

From what I can tell, he is not restricting CW to be only in this first
25kHz, but that only CW may be used there. So, you could still use CW
at the top of the bands if you want. Considering our present bandplans,
this is giving CW some exclusive frequencies it doesn't have (since
there are no CW-only subbands in HF) while (possibly) allowing voice on
many more frequencies. It would seem the people hurt the most by this
would be the HF digital operators.

So, it is more like restricting one 2 meter frequency to have only
voice. No much of a restriction...

How about this? At the risk of seriously stunting the opportunities for
exposure to current technoligical advances at the "higher spectrum" why
don't we provide a code free exam path to the "higher spectrum", say
no code requirements above 30 MHz and limit code requirements to HF access
only where CW is far and away the predominant non-voice mode internationally.
Hmmmm, this sounds familiar.

Seriously why did the CW good / CW bad debate wander off of R.R.A.P. and wind
up here?

It certainly makes things easier, but unfortunately it is also illegal.
Part 97.119a says that "Each amateur station...must transmit _its assigned
call sign_ on its transmitting channel at the end of each communication,
and at least every 10 minutes during a communication..." The FCC doesn't
assign tactical callsigns!

I've been net control during operations such as the ones described, and
solved this problem by keeping a list of locations and hams assigned to
each one next to the operating position. When possible, such assignments
were made in advance and participating operators would also carry a list
of who was where. A little more cumbersome, perhaps, but keeps within the
rules which the "tactical callsign" arrangement clearly does not.

: In the may 94 QST there is a UHF and microwave noise generator article.

: My question is why is there a 2.2 pf capacitor across the output on the
: UHF version?

: Granted, the reactance of a 2.2 pf cap @ 500 MHZ is only 145 ohms, but
: all I can see is that it would roll off the high UHF output.

In the absence of knowledge, I will offer an opinion.

It's probably to improve the output return loss (SWR) at high frequencies.
If the output impedance has a small net inductive reactance, then adding
a capacitor in parallel would give you a pure resistive impedance.

2571. code Keyer Keyboard

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-16 21:29:08 UTC
From: gerdeman@alrc.usbm.gov
Message-ID: <gerdeman.74.2ECA79A4@alrc.usbm.gov>
Source record: 256774

Several years ago I built a cw6805 Morse Code Keyer using a Ti99-4 keyboard. Now the keyboard is on the fritz. I took it apart and cleaned as much as I could. Some of the keys (function, 1 & 2) don't work. Other keys will either work or sometime give repeat letters. Is it possible to repair the keyboard? If I can't repair it where can I buy a replacement? Will a C-64 keyboard work?

Any help will really be appreciated . It is a fun keyer I hate to lose it.

Thanks

Steve Gerdemann (WB7OEE)

Seems like a perfect job for a a walkie equipped with the standard
Motorola "Man Down" option.

All you might need to do is add a very loud distinctive siren noisemaker
to the walkie so people in the building can find it.

GPS isn't going to work inside the building.

Well, when I drive past 50 KW KGO (on 810 kHz), through the prime
lobe of the pattern and within 100 feet or so of the end tower of the
array, I do not hear any interference with the radio in the Ford
listening on 740 kHz.

I must be really weird. Somewhere deep in the rcesses of what passes
for my mind, I remember seeing "._._._" (now the "period") listed as
having once been the exclamation point ! in American Morse. Since CW
QSOs _always_ terminate sentences with the break _..._ (a period is a
"novice accent"), I have for years been using ._._._ as the exclamation
point, and I don't think it confuses anyone.

Why can't we use another "filter" instead of CW? I would much rather work SSB than CW, but that's my personal opinion. What we need to do is eliminate the cw requirement if the operator is not going to use it. If someone wants to learn CW than let them. We have segments of the HF bands for CW use only. I didn't have to learn how to operate ATV, packet, or satellites to get my Technician ticket.

BTW, I have used tapes and software to try to learn CW, but it hasn't been much good. I do have a slight problem distinguishing tones. You can't say I am just another lazy no code tech. I have tried!

Mike Stramba (mike@io.org) wrote:
: Is anyone familiar with the Atlas 210x HF xcvr?

It was state of the art in its day, which was about the mid 1970's.
I got one a year and a half ago and used it while operating as YN1ASW
in Nicaragua last year.

: I'm going to look at it tomorrow night. The seller is asking $500.

I think that price is about 2X too high.

: It is a solid state unit that will run on 12v, has 250w of transmit power,
: and covers 10 - 160 meters.

You'll be lucky to get 100 watts out at 13.6 volts, and it will be
less at 12 volts. The 210x covers 80 - 10. There was a very similar
model, the 215x, that covered 160 - 15.

I liked that rig, it is still waiting for me in Central America, but
it was not trouble free. I had nasty problems with spurious
oscillations in the final on certain bands as the power level was
increased. This seemed to depend upon the match to the antenna. I
ended up being very cautious about operating when my housemates wanted
to watch television.

> get the shock...can anyone supply me with some definative info on this

You didn't supply enough info to give a really definitive answer, but the first thing I'd try is to get a real DC ground on your station...don't rely on the AC house ground, but run a wire from common chassis points to a known ground point, like a cold water pipe.

You didn't mention what kind of shock you were getting, but offhand I'd say what you were feeling was the reactive leakage from the AC line by-pass capacitors to the chassis of your transceiver.

I'd suggest you either get a good ground on your station or completely unplug it from the AC line before disconnecting your antenna system.

First off, I'd contact an AIWA sales representative (if you can find one there) and ask how to change the PLL tuning steps. Some but not all radios have a small slide switch somewhere on the radio to change 9/10 kHz. You might also try holding down any *one* button down while switching power on as some radio firmware will recognize this as a basic program change.

ARLB091 Amateur to join congress

David Funderburk, K4TPJ, has been elected to the U.S. House of Representatives. Funderburk, a Republican, was picked for North Carolina's 2nd District, to fill the seat of a retiring Democrat.

Funderburk, 50, holds a Ph.D. and taught history at several North Carolina colleges before being appointed by President Reagan as U.S. ambassador to Romania in 1986. His expertise is in East European and Russian studies. He was a Fullbright Scholar.

K4TPJ described himself to Roll Call, a newspaper serving Capitol Hill, as an ''avid ham radio operator.'' He holds a General class license.

Funderburk and his wife Betty Jo live in Buies Creek, North Carolina.

2586. newbie looking for test q's

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-17 01:24:22 UTC
From: lwallyci@onramp.net
Message-ID: <lwallyci-161194192034@dal26.onramp.net>
Source record: 256689

I came across the study test questions for my novice a/o tech (no code!) test SOMEWHERE in my net/gopher/veronica surfing, but now I can't find them! I thought it was over at OAK.oakland.edu, but if so, I can't find them again.
Please help! My radio shack book is too poorly designed to read!
Thanks beforehand. I'm not sure quite why i'm doing this, as a hang-glider-er, we can get a license waiver to use our HG frequencies anyway!

Hi Alex, your 1200 baud Hayes modems are probably the Bell 212 standard
which, to the best of my knowledge, are not used for RF. The Bell 202
standard is used for some VHF packet but I doubt that the above mentioned
modems will do Bell 202 which is FSK 1200/2200 Hz compared to the 4DPSK
of the Hayes 1200 baud modems.

The ARRL Handbook has a good writeup on ham modems in the digital
communications chapter. Let us know if you have any luck converting
Bell 212 modems for ham use.

I agree that the Jones Key paddle works best, at least for us ham-handed former bug operators. When I returned to hamming in March after an absence of 20 years, I tried several paddles, including the Bencher and Vibroplex. (I had used a Vibroplex bug.) The Jones was the only one heavy enough not to dance around my desktop. I only wish they made a single-paddle version.

While we are on the subject of intermod.....

I'm using a Yeasu FT-5200 and the intermod rejection is extreamely poor. I was going to use a bandpass filter, but the rig has an internal duplexer. Anyone have any suggestions short of putting a duplexer to split back to two antennae (I'm using a dual band comet antenna) and I don't like the Idea of shelling out for a fliter and two duplexers.

Tnx, 73

Message-ID: <Pine.SUN.3.91.941116211619.20293E-100000@access1.digex.net>
Source record: 256649

Do you think the problem is EMI or electromagnetic interference? It's possible. Putting the aluminum foil around the antenna creates a shield from the conflicting waves. It's the same reasoning of why automakers spend millions of dollars trying to shield its on-board computers. There have been problems in the past of car locks locking, cruise control speeding up and wipers turning on and off because of EMI.

I am doing some research into this area of why the metal coating does not work always. Problems still exist with cars, and airplanes!

Also in hospitals. A 2-way radio triggered a hospital air alarm system in Maine just this month.

Putting your AM station radio near a laptop makes the reception go bad. Try it.

If anyone has any thoughts on this please send them to me: angelat@access4.digex.net Thanks!

Angela

|>in normal wide SSB. I don't know about good quality equalilzers
|>but cheap ones don't divide up that range, do they?

Well I picked up a cheap one and it has the following ranges:

30 Hz, 60 Hz, 120 Hz, 240 Hz, 480 Hz, 1 kHz, 2 kHz, 4 kHz, 8 kHz, 16 kHz

As do many multi-octave equalizers. I'm not sure they all go down to 30 Hz, but 7-10 octave equalizers aren't that uncommon, and they can be pretty cheap. I've used a stereo one in combination with a W9GR DSP filter for some pretty good results. I "equalize" the signal going to the DSP with one channel, and then "equalize" the output of the DSP on the other channel. Works pretty well, especially for 8 bit DSP's that don't have quite the dynamic range of 16 bit ones, plus they tend to have more quantization noise, which the equalizer can help attenuate.

For $5, how can you go wrong? One thing I might suggest is that if you get a stereo one, cascade the two sides to give you greater range. This way if the equalizer has a +- 10 dB range, cascading the two channels will give you +- 20 dB.

Humm.. I guess I have never heard of the ATV mods for the Mirage Amps. Coul you please supply me with the information for the mods? Mirage sells amplifiers with the ATVN suffix on their model numbers that are supposedly designed to work on ATV, no mods required. What type mods are you doing down there? I don't have the Mirage catalog here in front of me, but D1010-ATVN and D1010-ATVRN comes to mind here, or was it the D100-ATVN, I just can't remember the model numbers right now.

Yes, I would imagine that any manufacturer would not honor a warranty where some ham had been inside their equipment changing components. I don't really blame them, do you?

Yes, you are absolutely correct. Perhaps I worded my message poorly
didn't I? I should have said "built for the 70 Cm band are DSB AM
transmittters...." Any amateur that operates a DSB transmitter on 421.25
without a filter is going to radiate signals outside of the amateur band.
The fact still remains all of the 70 cm transmitters currently built are
DSB AM transmitters. The filter is an option. Some hams use them, others
don't. In fact in this area, 421.250 is NOT a coordinated ATV channel.
We only have two, 427.25, and 434.0 Mhz. I happen to use VSB filters on
my ATV transmitters, but there are many hams that don't. I can't see
why you would blast the manufacturer because user of the equipment does
not use an optional filter. So what do you think we should do, blast
Yaesu, Icom, and Kenwood because HF operators don't all use low pass
filters and create TVI?

>

So which ATV transmitters and amplifiers do you suggest that we use Jay?
Should we spend a few hundred bucks and use P.C. Electronics and Mirage
with some filters, or do you think we should spend say 20 thousand and
buy a Harris, or maybe an ITC? I'm sure those put out signals that are
pure and clean. Please let me know what brands are best, I am very
interested. Maybe if they are not too expensive, I'll try one out.

By the way, I am going to call Mirage tomorrow and ask them just what
the heck that ATVN suffix on their model numbers means.

Hey, lets just eliminate the written tests, too! Some folks are
genetically incapable of learning electronics, too. Or doing math.
Sure wouldn't want to eliminate them from Amateur Radio!

This "denying individuals access to publicly owned airwaves" argument
is about as ridiculous as any I've seen on this group...from either
side.

How do you feel about eliminating all laws regulating uses of National
Park lands? They're publicly owned. How bout if we just opened them
up for everyone to use as they saw fit?

>your own signal, and presumably you ID when transmitting from the HT.

Yes. Even if you are NOT going to use the autopatch, do this.
Why cross-band the repeater all the time (and beat the heck out
of your final transistor) when your HT can hear the repeater just
fine? Again, as Dave said, this assumes your HT CAN hear the repeater
reasonably well.

I can't substantiate what percentage of the hams cited actually use
the code for communications but most have passed the code requirement.
The rabid code defenders in the group have contended that forcing hams
to acquire Morse code at specific sacred speeds by itself insures that
Ham radio
will not suffer theproblems of the citizens band. I, therefore, contend
that these NAL prove that isn't the case. In reality that has always
been BUNK.
The ham community reflects the same "only me" attitude as the general
population.

Perhaps the code users could develop "positive" reasons for using morse
code rather than "negative" reasons.

: The "Packet Perspectives" column by Stan Horzepa in the current
: (November,1994 p.110) QST addresses this question. In a nutshell, the
: answer is, yes,maybe, but not worth the time and effort involved.

Stan's column doesn't make it clear that the Bell 202 standard will rarely be found in a modem that was originally manufactured for the home computer market. This standard is for synchronous communications (no start and stop bits) and uses simple frequency shifts to distinguish 0 and 1 bit levels. No home computer that I have ever encountered has a synchronous serial port, they are universally asynchronous, and modems manufactured for these computers use a phase-shift modulation method that is totally incompatible with the frequency shift modulation used on 1200 baud packet.

A Bell 103 (300 baud) modem, on the other hand, could be used for h.f. packet. But you could also start from scratch with a few I.C.s and make one that would perform as well as or better than one of these old monsters.

>
>Geeze Gary,
>
>Is there anything that you DON"T know something about? This is amazing!

This is something I know *especially* about since I've been doing proofs of performance on broadcast TV transmitters for 30 years now.

>Yeah, it would be nice to buy some Harris or ITC or some other commercial
>gear to use on amateur television. However, this is a hobby, and we hams
>are cheap folks, and we use cheap ham equipment most of the time.

That's no excuse for violating good engineering practice. While Harris equipment is somewhat expensive (they don't make very many of a given model because of the small market size so they have to recoup their R&D and marketing costs by high unit prices), achieving good VSB need not be

expensive. Suitable SAW filters are inexpensive, and the added driving and mixing circuitry is only a couple of MMICs and DBMs. Alternately, brute force VSB output filters aren't particularly expensive at amateur power levels. They aren't like the huge water cooled units we used to run with old RCA transmitters.

>I suggest that you take an AEA VSB saw filtered transmitter and put it
>behind a Mirage amplifier and look at the output on your spectrum
>analyzer. Have you ever tried this? I challenge you to try it and then
>tell me all about the wonderful AEA transmitter. I mention the Mirage,
>since they seem to be about the only large company doing any sort of
>advertising of their amplifiers that are specifically designed to work
>with ATV. Yes, I do know there are others, Pauldon, Down East, etc.,
>however most of the ATV'ers around here use the Mirage for 420 ATV.

Mirage specifically discourages modification of their amplifiers for ATV, though PC Electronics sells so modified Mirage amps, Mirage won't honor the warranty. However, if you run the D1010N *properly*, it's sufficiently linear to give acceptable results. You *cannot* drive the D1010N to more than 40 watts peak sync tip power without unacceptable non-linearity. With a 50% APL picture, that's an average power of 10 watts out as read on an average reading meter like a Bird 43. Because of the extremely high peak to average ratio of the TV signal, an amplifier has to have a *lot* of headroom to remain linear. Harris' 80 watt solid state amplifiers, used following their exciter, are equivalent to 350 watt CCS CW amplifiers in order to have sufficient headroom.

>I'll bet that you will find that the LSB has been re-inserted during the
>amplification stage. Now, I won't go into why that happened. Perhaps
>it was the cheap amplifier that wasn't as linear as we were led to
>believe, or perhaps it was the wonderful AEA transmitter that did not have
>the LSB rolled off as much as they would like for us to have believed.
>I don't know what the reason really is, all I can tell you is that it
>happens!

It's probably because you're grossly overdriving it. You're getting all sorts of products out of the amplifier, not just a LSB. With a fast spectrum analyzer, you can probably find components way outside the 70 cm band edges. If you're getting more than 10 watts average out of a D1010N used for VSB ATV, then you're operating it in Class D for part of every horizontal sweep period.

>Are you saying that Harris and the other TV big boys are not using any
>filtering after amplification of their signals? I really sort of doubt
>that.

Tis true, today's transmitters do not use filterplexers. There's nothing but a harmonic filter on the output feeding the combiner.

>Since you are going to bash PC Electronics for manufacturing and selling
>AM ATV Transmitters, perhaps you should also mention the others. Let's
>see here.. there is Pauldon, Wyman Research, ATV World, HF Technology,

>and a few others that I can't think of right now.

Any company marketing a transmitter that won't meet good engineering practice for VSB transmission *deserves* bashing. If nothing else, they could include a brute force VSB filter in the output as standard equipment. Failure to do so has led to too many amateurs radiating full DSB TV when that's not within acceptable engineering practice.

>Since we amateurs are basically cheap folks that spend as little money
>as possible on our hobby, we tend to use amateur transmitters and
>amplifiers, not Harris or other commercial equipment.

And there's nothing wrong with that, as long as you don't *abuse* the amplifiers by overdriving them. The basic problem is that a linear amplifier for VSB TV has to have at least 4x the headroom of a amplifier for symmetrically modulated signals. Even a brute force VSB filter won't properly clean up all the products from an overdriven amplifier. The FCC requires a linearity of 0.1% and an incidental phase shift not to exceed 2 degrees across the bandpass in order to meet good engineering practice. That's not really difficult to do with a bit of proper design.

>Since at present, all of the amateur television transmitters built for
>420 Mhz are DSB AM transmitters, then I guess we have to face real life.
>The VSB filter is an option to the ATV transmitter that is available
>through several manufacturers of amateur radio equipment. Whether the
>ATV operator chooses to spend the extra money to put the filter behind
>his transmitter/amplifier is another question. I find that most folks
>do not spend the extra bucks for the filter. Yep, amateur radio is a
>tough cruel hobby, but somebody has to do it.

The fact that you can't depend on individual amateurs to follow acceptable engineering practice is the reason I slam the manufacturers for failing to build the filtering into their equipment. At least AEA did it right. They delivered an in specification VSB signal at their transmitter output. They can't be held responsible for overdriven amplifiers used after that.

>I have a great idea. Since there are no amateur VSB ATV transmitters
>being currently produced, and since the current models of DSB AM
>ATV transmitters are such spectrum hogs, and since all hams are cheap

>100 watts. That should do it, and keeping in the competitive spirit of
>amateur radio, let's sell the amps for about $120 bucks.
>
>
>What do you say? Please let me know, you have me very excited now.

A suitable VSB 10 watt transmitter could be marketed for around $400,
but I happen to think that VSB TV on 420 MHz is a bad use of resources.
I'd prefer that amateurs switch to FM TV on the higher bands. It's
much easier, and cheaper, to do good FM TV, and the FM threshold
effect gives superior video SNRs. It's not difficult at all to get
50 mile range with a 48 db video SNR using a 1 watt 2 GHz FM TV
transmitter and a directional antenna. We do it every day in ENG
service in broadcast. I can build a 1 watt 2.3 GHz FM video transmitter
for under $100. Even cheap amateurs should be able to swing that.
And because the modulation is symmetrical FM, a good old Class C
amplifier can follow the transmitter without garbaging up the spectrum.

2620. Equipment Dealer Questionnaire

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-17 14:52:27 UTC
From: lakeith@robins.af.mil
Message-ID: <3afqnb$qls@wrdis02.robins.af.mil>
Source record: 256593

I am collecting information about amateur radio equipment dealers for possible use in an article for one of the amateur radio magazines. If you have bought a new transceiver from an amateur equipment dealer during the past two years, please take the time to complete this questionnaire and return it to me via e-mail.

Note: Please do not post your response to this newsgroup. Use the reply mail function to send your response to me at the address shown at the bottom of the questionnaire.

Thanks for your assistance!

73,

Larry, KQ4BY

= = = = = = = = = = = = = = = = == = = = = = = = = = = = =

EQUIPMENT DEALER QUESTIONNAIRE

1. Did you buy the rig:

___ at a store.

___ at a hamfest.

___ via mailorder.

2. How many dealers did you contact for price and availability information before you bought the rig? ______

3. Why did you choose the dealer where you bought the rig?

_____

4. Would you buy another rig from the same dealer?

___ Yes ____ No

Why?_____

5. May I contact you for additional information? ___ Yes ___ No

Please send completed questionnaires to:

lakeith@robins.af.mil

>If we want to continue this argument, we should find some middle ground
>to start from. Obviously, whether or not learning the code is relevant
>should be something to prove, not a starting point.

Ah, both yow and Gregory miss the point. It's not that Morse Code
is necessarily irrelevant to amateur operations, though it certainly
is becoming irrelevant everywhere *outside* the amateur service.
Morse remains a popular mode in amateur radio, nearly half as popular
as SSB if the ARRL survey is still valid. What's irrelevant is the
testing requirement for manual Morse. My contention has been that
for the 38% of amateurs who ever *use* Morse, the test is irrelevant
since they have to learn Morse anyway to use it on the air. For the
62% of amateurs who never *use* Morse, the testing requirement is also
irrelevant, since they aren't going to use the skill anyway.

The argument that Morse testing serves as a lid filter is discredited
by the fact that it has *failed* to so serve with current amateurs.
The fact that Extra Class amateurs receive a disproportionate share
of NALs would seem to indicate that even higher speed Morse testing
is an ineffective lid filter. In fact, one could make a case for the
filter *selecting* for lids, though I won't attempt to make that case
since I think other factors are at work here, and that Morse status is
only a symptom, not a cause.

The "effort" theory fails because people value most what they can do
every day, not what they did *once* in front of a government agent.
Their license is of value not because of effort expended to meet a
government requirement, but because of what it enables them to *do*
every day in the amateur service. People treasure that license, and

avoid doing things that would cause it to be taken away, because of what it enables them to do in the future, not because of what they did in the past.

The only argument that seems to hold water is the forced recruiting argument. Having the government act as a forced recruiter to introduce people to Morse who would otherwise avoid it, is the only argument that may have some validity. Some people do seem to take to Morse after they've been forced to struggle through the conditioning. Those people might never have become Morse operators otherwise. However, on the flip side of that are the people who may have become good operators of other HF modes who were discouraged from doing so by the Morse testing requirement. I think losing the latter is more damaging to the amateur service in the long run than gaining the former.

The reason I say that is that only a very small percentage of amateurs are innovators, and less than half are service oriented. To arbitrarily restrict the pool of operators by a test that isn't necessary to successful HF operation serves to limit the potential number of innovative or service oriented operators available to the amateur service on HF. That in turn means a reduction in ability to meet two of the major goals of the service.

2624. Waveguide alignment?

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-17 15:30:03 UTC
From: zlau@arrl.org
Message-ID: <1994Nov17.153003.1306@arrl.org>
Source record: 256700

Do amateurs have to worry about precisely
aligning waveguide? Why?

Its been my experience that for low power
amateur work, it has to look really terrible
for there to be a problem. You can actually
have air gaps or crooked joints and it still
works. This experience seems to be shared
by the people I talk to on 10 GHz.

Of course, 100 mile obstructed paths seems
to be about the limit for us--we need a good
path or a tropo opening to make 200 mile
contacts. I'm still looking for someone in
FLA or NC to try some really long contacts...

Taking a "naive" point of view, at least.

The reason the government regulates the electromagnetic spectrum is
that the spectrum is a limited resource: if I'm your next door
neighbor and I'm using a given frequency, you can't use it. To
minimize conflicts, someone (the FCC) is given authority over the
spectrum.

Now let's talk about radio, shall we?

2627. Re: Shocking antenna

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-17 15:58:35 UTC
From: nick@cs.unc.edu
Message-ID: <3afujb$4rd@altair.cs.unc.edu>
Source record: 256604

This is kind of puzzling. The usual thing that happens in such situations is that there is leakage of AC line current through the line bypass capacitors in the power supply, causing a voltage to appear on the chassis of the rig. Getting between the chassis and real ground will give you a tingle - I have a number of older rigs and this is very common. So I get the tingle if I get between the coax shield and ground. Could also be between center pin and ground because most rigs have a DC (and 60Hz AC) path from center pin to ground - on rcvrs, this is the antenna input xfmr primary (and your transceivers are in receive mode when unpowered). On transmitters, there is often an RF choke from the antenna terminal to ground as a safety device in case the output DC blocking capacitor fails - this would cause your transmitters fuse to blow instead of putting a lethal 600-700 vdc on the antenna line.

So, if you don't have a separate permanently connected wire from ground to your rig's chassis (and this is the right and proper thing to do for safety's sake), I can see where you would get a tingle (can be a *strong* tingle or severe shock if your AC line bypass caps are shot - this is not uncommon in older rigs) if you were in the path between either ground and the center pin or between ground and the shield.

But I am puzzled if you only get the shock from the center pin. Perhaps one leg of your dipole is too near a power line and you are getting coupling into the antenna ? or you have a pretty long dipole and are picking up a static charge ? do you live someplace windy and dry ? frequent sandstorms ?

The resistors you refer to are, as someone else pointed out, there to prevent parasitic VHF oscillation in the finals. In your power supply section there will be a bleeder resistor to discharge the power supply after it is turned off.

Try this experiment - unplug all your gear from the AC line and see if you still get the center pin tingle. I think you would be well advised to do two things. 1) ground your rigs with a separate ground wire.
2) probably replace the AC line bypass capacitors.
This should eliminate the problem.

73, good luck, and have fun

Yeah, but if one were sending mathematical/statistical formulae
via Morse code, having a symbol for the exclamation point would sure
beat the hell out of having to write the word "factorial"
umpteen times per formula {grin}.

Agreed. The question is: what form should such recognition take?

Pr> I guess I am saying that I thought it
Pr> was a little too easy.

When I passed my Extra exam in 1969, it did not seem so easy (though it certainly wasn't as difficult as, say, the Grad Record Physics exam). I found my physics background (I was a physics major then) to be most helpful.

I have long wondered, however, if the Extra exam should not have some questions on calculus, complex number theory and differential equations since electrical *theory* (as opposed to *practice*) requires application of these disciplines. For example, AC circuit and impedance calculations involve complex numbers and the formulae for resonance circuits we've all grown to know and love derive from the solution to second-order partial differential equations.

It'll never happen, though.

No one has yet found an '!' that didn't turn out to be a shortcut symbol for computer-code programs.

Is one needed? International morse seems to have survived a long time without it. The customary HI HI to indicate exclamation is probably good enough.

In article <3a8s7m$qr4@newsbf01.news.aol.com>, rbellville@aol.com (RBellville) says:
>
>I'm putting together some info regarding 6 meter AM radios. I'd like to
Well, not too much danger of 6M going "the way of 220", as it used to be TV channel 1.
I suppose it could be re-grabbed for similar usage. Actually, 220 was stolen
because of its desirability and the political/economic clout, not due to its
lack of use.... 6 meters, at least out here in the unpopulated West, has
always been a deserted band except for one or 2 gung ho retired types who
called CQ day and night, the most of us relied on monitoring the FM BC
band and the lower TV channels to watch for openings.... and many's the
time I've watched snow-free TV on channel 2-6 from Canada etc but NOBODY
was on 6...
I was hooked on 6 from my first contact, which was interesting. When I
got home from VietNam in 1970, I ordered a Knight-Kit TR-106 from Allied
Radio, who was in the process of closing them out. As I recall they had
sold these kits for years for 149.95 or so and my closeout price was
69.95. I worked in a TV shop then and had some equipment of my own so
getting the kit built and aligned was no problem, BUT there was NOBODY
to talk to! I'd seen these pix in QST showing a ham with a TR-106 and
a shack wall full of 6 meter QSL cards... what I didn't realize was 1970
was at the low end of a previously fantastic sunspot DX cycle, and that
nobody operated 6 unless the band was open. I even installed it in my
pickup and drove several times the 75 miles to Albuquerque with it,
parking on 9 mile hill overlooking the city and calling CQ to no avail.
The TR106 had a xtal controlled transmitter and a tunable receiver that
drifted horribly (it had a nuvistor tube in the VFO that continually heated
up the VFO box). After playing with it for a few months I put it away,
no one to talk to. A year or so later I moved my trailer house to the
boondocks several miles from Grants, NM, and of course had to take down
my HF dipoles and for the first few months at the new QTH the only antenna
I had available was the 6 meter whip mounted on the air conditioner on the
roof of the trailer which I'd never removed. I hooked up the TR106 to it
again and tried it once or twice, still no luck. So it just sat there
and gathered dust.
One Sunday after church we had a couple of missionaries over for lunch and
one of them spotted the 6 meter AM rig and said "Oh, you're a CB'er, huh?"
So I explained to him, no, I was a ham, and this radio is on a band that
no one else around here uses, but if there was, this is how it would be
used.... I warmed up the radio and keyed the mike and called a simple
3 X 3 CQ and unkeyed the mike. Just as I started to explain to the visitors
that no one would answer, etc, a voice blasted out of the speaker, like
he was next door, "... WB5AOX this is Whiskey Zero etc etc... in Missouri!"
I about swallowed the microphone in my astonishment, I promptly offended
both my wife and my visitors by staying on the radio the rest of the

afternoon, merrily working dozens of 6m "DX" with my single xtal of 50.4 MHZ. I had not previously realized how "skip" affected 6 meters, and even worked a local or 2 over the ensuing years, learning how to watch TV ch 2 for openings, etc. One station I worked down in TX learned I was stuck on one freq and he mailed me , gratis, his collection of several crystals for other great 6M frequencies. Eventually I even got the external VFO for the transmitter. Of course, SSB was starting to dominate 6 and many times I could hear the WUFF WUFF of SSB activity around 50.11 but no takers on AM so I eventually built a homebrew transverter for my HF SSB rig to get me on 6 SSB and eventually sold the old AM'er for 35 bucks or so, including VFO, at the Flagstaff AZ hamfest. I've also used an old Lafayette 6M AM rig at a club station, most of the cheap 6M AM rigs of those days had similar problems with drift, etc, you had to retune the receiver every few minutes or you'd lose the station you were talking to. The Cleggs and other higher quality rigs had no such problems.
Sorry to blah on like this, but there you go....
Jim Devenport WB5AOX (now active on HF, 2M via the WB5AOX crossband remote base with control inputs on 224.94 and 444.65 MHZ 103.5 CTCSS)

I recently attended the Blue Angels air show at McGuire AFB earlier this fall
and brought my HT with me (extended receive with all between 118-174 MHz).
142 & 143 MHz were dead throughout the entire show. As for the 200-400MHz frq.
I do not know. However, if you are using a slower scanner, cutting those 2
frq. out may help speed up the cycle on the scan somewhat. This is only based
on an observation at one of the last shows, so it may be incorrect down in
Fla. Two more things you might want to add to the list however are the tower
and approach frequencies for the AFB you will be going to. I don't know them,

but during the airshow I attended, they were very active during the earlier flights...

2636. Re: Morse exclamation point?

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-17 17:18:40 UTC
From: Larry Kenan <larry.kenan@SanDiegoCA.NCR.COM>
Message-ID: <CzF9F5.EwJ@lcpd2.SanDiegoCA.NCR.COM>
Source record: 256703

I found an explanation about what happened to the Morse exclamation point in a 73 magazine article. The May 1966 issue, in "Origin of the Wireless Code" by F.D.Whitmore, W2AAA,in the discussion of International Morse, states:

The period consisted of six dots sent in three groups of two (.. .. ..). This stood until September 1, 1939. At the Cairo International Radio Convention in 1938, the delegates agreed to change the period to the symbol used for the comma (.-.-.-). This satisfied telegraph companies whose printers produced it (ie. the old period) as three "i"s. The symbol for the exclamation mark became the comma (--..--). Telegraph operators never used the exclamation mark except to abuse each other within the law. A half dozen !!!!!! expressed ironical admiration of another operator's stupidity.

-. -.. --- ..-. --.- ..- --- - .

So the teleprinters that couldn't handle a spaced character were the impetus and the exclamation point was dropped due to lack of use.

2637. Emergency communications and wilderness rescue

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-17 17:26:00 UTC
From: HElliott@losat.redstone.army.mil
Message-ID: <1669CB2E019D1B76@-SMF->
Source record: 256607

Some hams in my area here in North Alabama have contacted the Forest Service in the past and tried to get them interested in monitoring a specific amateur frequency for emergency purposes. They also proposed using the FS firetowers as sights for an amateur repeater that would be dedicated to emergency response for wilderness situations. The Forest Service response was like that of a bunch of cows looking at a passing train.

Has anyone else suggested this to FS officials? Are there specific frequencies in use by FS rangers that could possibly be accessed by amateurs in emergency? I regularly carry my HT into the Sipsey Wilderness area which has pretty good coverage by the N4GKE repeater in Moulton, but I suspect that in other wilderness areas, it may not be so easy. A recent posting in rec.backcountry by a non ham asked what should one do to get help in a wilderness survival situation and what two way communications devices were recommended. A ham sugggested the codeless tech license and the purchase of an HT, but warned of the likelihood of getting no answer at all.

I think that we ought to consider designation of a particular frequency in VHF and another in UHF for the purpose of emergency use, and set up some listening posts in and near wilderness areas, or at least ask hams to monitor for the possiblity of acting as relay. Here is a place where hams could really prove their worth and defend their use of the airwaves. Any suggestions? Am I totally out of touch with reality? What about ARES and RACES - where does this fit in?

Thanks,
Doc Elliott KE4KUZ

Attention Pilots & Others:

An EVAC (Emergency Volunteer Air Corp) wing is now forming in the Long Beach area.

EVAC is an all volunteer "non-profit" group for the purpose of giving disaster related aid within our own local community.

As such, it helps those close to us first! Interested??

If so, please set aside a couple of hours and come to our first "formation" meeting. EVERYONE IS WELCOME!! Due to our mission, we need people with skills like: Pilots, Owners of aircraft, FBO's, Ground facility personnel, Logistical people, Administrators, Amateur radio operators, Clerical, and any other interested parties.

The first meeting will be held:

AT: AirFlite offices, 3rd floor meeting area (take the elevator)
ON: December 1, 1994
BETWEEN: The hours of 4:30pm and 7:30pm
For Further Information: Mel Frost @ 310-420-2264 (evenings)

AirFlite is located on the west side of Long Beach airport, on the runway side of the MD "C-17" building. Take Wardlow east from Cherry Avenue, and turn right on AirFlite way. Near the end, park at the end of this road and enter through the main glass doors, elevator is to your right (their phone is 310-490-6200 if you get lost)

SEE YOU THERE!

(posted for Mel - please direct inqiries directly to him)

I just received my FT-900, nice radio! But I have noticed that YAESU does a poor job at operator manuals, I went into the rig last night to install the SSB filter, again following the operator instructions, boy was that the wrong thing to do.

Now the real question, who has installed the CW or SSB filter and do you have to remove every cable on that card to move the card up enough to unsolder the standard filter and re-install the new SSB filter?

Thanks in advance .... 73 WB5YTG Rick

2645. wife's first radio

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-17 18:33:00 UTC
From: c_prewitt@emulex.COM
Message-ID: <2ECBA202@msgate.emulex.com>
Source record: 256608

I see lots of articles asking what is the "best" radio. It all depends upon who you are and what you are going to do with it. Here is how I assisted my wife in purchasing her first radio.

1. I allowed her to determine if she wanted a mobile or hand held.
She wanted a hand held.

2. I took her down to the local candy store and asked the sales person to put all of the hand held radios out on the counter.

3. I then asked the important questions:
A. Which one or ones don't you like the looks of?
Away went several.
B. Which one or ones don't you like the feel of?
Again away went some more.

4. I then asked her to pick up and program several frequencies and ctcss tones into them.
There were some even the sales person had trouble programming!
Away went some more.

5. We were down to about 2 radios. I then asked my wife to listen to the sounds of the people on a local repeater. The final radio was determined. The radio that my wife bought was one that she liked the looks, feel and could program without help. She has since purchased a newer radio (dual band) but she still uses the one that I helped her purchase.

>Morse remains a popular mode in amateur radio, nearly half as popular
>as SSB if the ARRL survey is still valid. What's irrelevant is the
>*testing* requirement for manual Morse. My contention has been that
>for the 38% of amateurs who ever *use* Morse, the test is irrelevant
>since they have to learn Morse anyway to use it on the air. For the
>62% of amateurs who never *use* Morse, the testing requirement is also
>irrelevant, since they aren't going to use the skill anyway.

I think you have forgotten who you are responding to. I agree with you that the testing should go, but using the irrelevance of the code or the testing as a basis of arguing is just plain stupid. Especially since one side is saying it is relevant, and the other is saying it isn't. For any argument based on the relevance (or irrelevance) of the code or testing to hold any water, you must first prove that the code or testing is relevant or irrlevant.

For the most part, that is not being done. Screaming it over and over will not help.

If you want to lump me in with those arguing for the continued testing, please keep any comments to yourself. You'll notice if you look at any of my posts where I actually take a stance that I am against the testing. I just want this so-called "debate" to be civilized and possibly actually persuade others to agree with me (or the other side if their arguments are good enough). So far, you seem to be one of the biggest apponents to a rational debate.

2650. GB2RS News 20th November 1994

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-17 19:16:35 UTC
From: dave@llondel.demon.co.uk
Message-ID: <785124995snx@llondel.demon.co.uk>
Source record: 256708
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.info

Good morning. It's Sunday the 20th of November and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

Now this week's headlines:-

There's a new two metre repeater in mid Wales,

December's RadCom will be a little late, and

Don't forget to vote in the RSGB Council election.

And we start this week with a number of items of repeater news:

The new Mid Wales repeater GB3RA became operational on Friday the 5th of November. The repeater is located north-west of Llandrindod Wells, Powys, locator IO82GG and operates on channel R5, which has its output on 145.725MHz and input on 145.125MHz. Further details and/or reports should go to the repeater keeper GW0KQX, whose address is correct in the RSGB Call Book.

The Yorkshire Coast two-metre 'In-fill' repeater, GB3YC, became operational on Monday the 7th of November. The repeater is located north-west of Scarborough in North Yorkshire and operates on channel R0, which has its output on 145.6MHz and input on 145.0MHz. Further details and/or reports should go to the repeater keeper G0OII, whose address is correct in the RSGB Call Book.

The Newhaven 70 centimetre repeater GB3LR, was returned to service on Saturday the 12th of November. The repeater operates on channel RB11, which has its output on 433.275MHz and input on 434.875MHz.

The Kilmarnock repeater, GB3AY, on channel R2, has been switched off because of a logic problem. The keeper, GM3YKE, regrets any inconvenience to users, but at the moment he is unable to say how long it will be off. For further details, contact GM3YKE whose address is correct in the RSGB Call Book.

The Elgin repeater GB3SS, on channel R0, had to be switched off on Thursday the 2nd of November, due to a technical fault. The keeper, GM7LSI regrets any inconvenience to users, but at the moment he is unable to say how long it will be off. For further details, contact the group secretary GM4WKO whose address is correct in the RSGB Call Book.

The December edition of Radio Communication has been subjected to unavoidable production delays and is likely to be delivered to members during the first week in December. We apologise for this delay which is

not expected to affect subsequent editions.

RSGB members are reminded that the ballot papers for Council nominations must be received at RSGB Headquarters by 12 noon on Tuesday the 29th of November. The ballot paper and proxy voting form are part of the Society's Annual Report and Accounts which was posted to all members on the 17th of October. Any member who has not received this document should contact Fay Huxley at RSGB Headquarters urgently.

The Annual Meeting of the Radio Society of Great Britain will take place at the Royal Society of Chemistry, London on Saturday the 3rd of December at 2pm. Full details are in the RSGB Annual Report, sent out with November's RadCom.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

From East Kiribati, WC5P and KH6DFW will sign respective T32BE and T32BI from Christmas Island from today, Sunday the 20th until Sunday the 27th taking in the CQ World Wide CW contest.

From Syria, a large US American group, including K3NA, N6TV, W6OAT and W0YK will sign YK0A from Wednesday the 23rd until Wednesday the 30th on all bands and modes, with special attention to CW, RTTY and LF bands.

And from the Isle of Man, G4UOL will be active as GD4UOL from now until Wednesday the 30th of November and as GT3FLH during Thursday and Friday the 1st and 2nd of December. Activity will be on all bands, CW only. Check 10kHz up from band edges, plus 10.102MHz and 18.070MHz.

Next the Rally News and we know of one for today, Sunday the 20th of November: The Bishop Auckland Amateur Radio Club Radio Rally is being held at the Newton Aycliffe Leisure Centre, Beveridge Arcade, Newton Aycliffe, County Durham. From the A1M take the A167 to Aycliffe town and follow the rally signs. Doors open at 11am, or from 10.30 for disabled visitors. The event features trade stands covering radio, electronic and computer interests, an RSGB Book and Information stand and a bring and buy stall. The centre has numerous attractions for the whole family. Refreshments are available and talk-in is on 2 metres, channel S22.

Now news of the two rallies we know of for next Sunday the 27th:

The Bridgend Radio Rally is to be held at the Bridgend Recreation Centre, Bridgend. From the M4, take junction 35 or 36. Doors open at 11am, or from 10.30 for disabled visitors. The event features a bring and buy stall, and an RSGB Book stand. RSGB Morse Tests will be available on demand but remember to bring two passport size photographs and the necessary fee. Refreshments will be available and talk-in will be on 2 metres, channel S22 and via GB3MG on RB7. Details from Mike, GW7NIS on 01656 722199.

The West Manchester Radio Clubs Winter Rally is to be held at the Bolton Sports and Exhibition Centre, Silverwell Street, near Bolton town

centre. Doors open at 11.00am or 10.30 for disabled visitors. The event features the usual trade and club stands and a bring and buy stall, all at pavement level. Details from G1IOO on 01204 24204 evenings only.

Now news of a Rally cancellation:

The Leeds and District Amateur Radio Society Christmas Rally, scheduled for the 4th of December has had to be cancelled. Details from G0IBU whose address is correct in the RSGB Call Book.

HF contest news next:

The HF Contests Committee reports much activity during the RSGB Club Calls Contest, which took place on the 12th of November. It appears that many more clubs are using this event as a first step to general contest activity and several clubs and their members made a first time appearance. A number of new Novice and Class 'B' licensees seemed to be enjoying themselves operating club stations. The committee hopes to hear many of these newcomers in the RSGB Affiliated Societies' Contest in January.

Next weekend, the CQ World-wide DX CW Contest takes place from 0001 on Saturday, to 2359 on Sunday the 27th. All bands 160 to 10m will be used, but not the WARC bands. See October RadCom p18 for brief details.

Next some VHF contest news:

The RSGB VHF Contests Committee has declared the winners of the 432MHz Fixed Station Contest which was held on the 21st of August. The contest attracted an increased number of entries and conditions were generally considered to be average to good. Many stations had contacts in excess of 350 kilometres. Stations in nine countries, twenty-five Locator squares and forty-four UK counties appeared in the entry logs. The Single Operator section winner was Erik Gedvilas, G8XVJ, with 32,500 points from 75 contacts. Runner up was D Gordon, GW6ZUQ, with 27,693 points from 64 contacts. Winner of the 'Others Fixed' section was M J Willis, G3IGQ, with 9,400 points from 46 contacts and the Wythall Radio Club, G1WAC, was runner-up with 4,653 points from 33 contacts. Certificates were also awarded to Frank Laanen, PE1EWR, the leading overseas station and Roger Piper, G3MEH, who was the leading station using 25 watts or less to a single antenna. The full results will be published in RadCom as soon as possible.

The first RSGB Winter Microwave Cumulative Contest takes place next Sunday the 27th of November from 0900 to 2100 UTC on all bands from 2.3GHz and up. See November Radcom page 78 for further details.

The penultimate RSGB 432MHz Cumulative Contest takes place on Monday the 28th of November from 2030 to 2300 UTC. For further details see July RadCom page 82.

Special event stations active this week include several who are operating as part of the BBC's Children in Need appeal during next

Friday and Saturday, the 25th and 26th of November. We have details of two of these:

GB2CIN, will be aired from Jarvis Brook Social Club by members of the Crowborough and District Amateur Radio Society. Operation will be on HF and VHF. Contact Mick, G6UUO on 01892 661807 for further information.

GB0KIN, Kids in Need, will be operated by members of the Mid Sussex Amateur Radio Society from the Burgess Hill Shopping Place. Activity will be on 2 metres and 70 centimetres and pledges will be for the number of contacts. Details from Phil, G3LCF on 01444 8831400.

And now the solar factual data:

The period from the 7th to the 13th of November saw solar activity at very low levels, with a decline in both sunspot and solar flux levels. No flares of any note were reported. The geomagnetic activity ranged between quiet and unsettled levels, mainly affecting the more northern latitudes.

The sunspot indices increased slightly, reaching 69 on the 12th before declining to end the period at only 11. The spot indices meaned at 40. Solar flux levels hardly varied from day to day, and averaged 80 units for the period. Though the electron fluence levels overall have declined slightly, they are still at a relatively high level. The 90 day solar flux averaged 82 units on the 13th.

Due to a disappearing filament on the 7th, the geomagnetic field became unsettled giving an Ap index of 14 units by the 9th. From then on, levels declined to mostly quiet, being down to only 5 units by the 13th. The period averaged an Ap index of 9 units. The state has been 'nil, nothing to report' throughout the period. The x-ray flux declined slightly from A5.4 down to A3.0 units, with the period averaging A3.5 units.

The aa indices, as reported by the British Geological Survey for the period from the 10th to the 16th of November, were mainly unsettled, however the 6th, became very disturbed with a late morning period being up to 102 nanoTeslas, giving an index of 54.2 nanoTeslas - about K4 - for that day. The period averaged 31.8 nanoTeslas, about K3. The October monthly geomagnetic Ap index was 19 units, with the smoothed level for April 1994 being 17.6 units. There has been a steady increase in the smoothed magnetic levels since April 1993 which was 14.9 units.

I'll repeat the figures. Spots - 40; Flux - 80; Ap index - 9; x-ray flux - A3.5. October magnetic Ap 19.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers, as reported by Meudon, declined over the period from 8.2MHz down to 6.8MHz by the 13th, giving an average of 7.3MHz. The darkness hour lows averaged 2.6MHz and were reasonably steady. Spread F was reported on the 8th lasting up to 9

hours. The highs are now occurring around mid-day, with the lows mainly around 05.00 to 06.00 hours.

I'll repeat the figures. Highs - 7.3MHz, Lows - 2.6MHz.

And lastly the solar forecast:

This week, the more active side of the sun should be rotating into view, solar flux levels are expected to increase into the 90s. There is also a chance of the odd C class flare. Geomagnetic activity is expected to be up to very unsettled levels today, then declining to more quiet levels until the 25th, when a recurrent coronal hole is expected to lift levels to very unsettled or possibly sub storm at higher latitudes. Ionospheric MUFs during daylight in the south, are expected to reach 25MHz, and in the north about 21MHz, but much will depend on the level of geomagnetic activity. The best daylight paths are generally north/south, with the lower HF bands giving east/west paths during the darkness hours.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G 0 Victor Lima and G 7 Tango Victor series, and Novice calls in the 2 0 Alpha Juliet and 2 1 Delta November series.

--

GB2RS is prepared by the Radio Society of Great Britain
and is broadcast in the 80m, 40m, 6m and 2m bands.

In article <sdarragh-171194092834@sdarragh-mac.cisco.com> sdarragh@cisco.com.3 (Scott Darragh) writes:

What is the exchange for this weekend. Can I get an example? This will be my
first crack at contesting.

The exchange is: serial-number, power class, your call, check and section.

power class is B (>100 watts), A (not >100 watts) and Q (<5 watts).
check is year first licensed.
Section is ARRL Section.

I will be using, for instance:

"KE6MGW, number 146 A, KD1ON, 63 New Hampshire".
[using phonetics of course.]

Let me know how far it jumps the next time you key up on the HF bands, especially if your SWR isn't really good! You've got a box full of high impedance nodes and high gain amplifiers- unless it's really well shielded and filtered, the results should be very interesting when a little RF is added...

2653. Alpha Bravo Charlie Delta: phonetic alphabets (revised)

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-17 20:24:31 UTC
From: Brian.Kelk@cl.cam.ac.uk
Message-ID: <3age5v$5ce@lyra.csx.cam.ac.uk>
Source record: 256625
Cross-posted to: alt.usage.english,sci.lang,rec.radio.amateur.misc,rec.radio.info

Phonetic Alphabets (Alpha Bravo etc)

There is a widely known alphabet Alpha Bravo ... Yankee Zulu.
Such alphabets are variously known as phonetic alphabets,
radio alphabets and spelling alphabets. This collection
currently includes alphabets for the following languages:

English, French, German, Dutch, Flemish, Italian,
Rumantsch, Slovak, Polish, Hungarian, Swedish,
Finnish, Russian, Chinese and Esperanto.

This posting supersedes the one of 13th October.

Recent new material: Esperanto alphabet 17 Nov 94

My thanks to the many contributors, not all of whom are
acknowledged below.

I can make no guarantee of accuracy of this information;
indeed please send me any corrections or additions.

In my capacity as the editor of this collection I have no
objection to the further electronic distribution of this
posting in full in circumstances where it is likely to be of
interest.

Comments in square brackets are my own.

Brian Kelk bck1@cl.cam.ac.uk
17 November 1994

***** ENGLISH *****

The NATO phonetic alphabet (as per the Cambridge Encyclopedia
of Language under Seaspeak):

Alpha Bravo Charlie Delta Echo Foxtrot Golf Hotel India
Juliet Kilo Lima Mike November Oscar Papa Quebec Romeo
Sierra Tango Uniform Victor Whiskey Xray Yankee Zulu

[The same alphabet, modulo Alfa and Juliett, is approved by
the International Civil Aviation Organization and the FAA.
The International Telecommunication Union Phonetics list
has: Alfa, Juliette, Oscar/Oskar, Victor/Viktor.
Dates from about 1956.
UK police use Indigo instead of India (?)]

Telecom B:

Alfred Benjamin Charles David Edward Frederick George Harry
Isaac Jack King London Mary Nellie Oliver Peter Queen Robert
Samuel Tommy Uncle Victor William Xray Yellow Zebra

[Found in Swedish, Dutch, Hungarian telephone directories.
A Swiss directory has: Andrew Charlie Lussy Queenie Sugar]

British A:

Amsterdam Baltimore Casablanca Denmark Edison Florida
Gallipoli Havana Italia Jerusalem Kilogramme Liverpool
Madagascar New_York Oslo Paris Quebec Roma Santiago Tripoli
Uppsala Valencia Washington Xantippe Yokohama Zurich

[An 'international' alphabet in a Dutch telephone directory
has: Danemark. A 'French' alphabet in a Hungarian directory
has: Cassablanka Danemark Que'bec Upsala Zu"rich]

Used by police in New York City:

Adam Boy Charlie David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Peter Queen Robert Sam Tom
Union Victor William X-ray Young Zebra

[Variants: Eddie Larry Nancy Thomas Yankee Yellow]

Used by police in Nassau County, Long Island, New York:

Adam Boston Chicago Denver Edward Frank George Henry Ida
John King Lincoln Mary Nancy Ocean Peter Queen Robert Sam
Thomas Union Victor William X-ray Young Zebra

Used by police in San Diego, California:

Adam Boy Charles David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Paul Queen Robert Sam Tom Unit
Victor William Xray Yellow Zebra

Used by police in Hutchinson, Kansas:

Adam Boy Charles David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Paul Q.. Robert Sam Tom Union
Victor William X-ray Yankee Zebra

Sometimes used by radio hams (unofficial):

America Boston Canada Denmark England France Germany
Honolulu India Japan Kilowatt London Mexico Norway Ontario
or Ocean Pacific Quebec Radio Santiago or Spain Tokyo United
Victoria Washington Xray Yokohama Zanzibar

[Much variation: Amsterdam, Brazil, Baltimore, Chile,
Finland, Greece, Guatemala, Hawaii, Italy, Kentucky,
Luxembourg, Nicaragua, Portugal, Romania, Sweden, Texas,
Uruguay, Venezuela, Whisky, Zulu]

The ARRL (American Radio Relay League) alphabet (1948):

Adam Baker Charlie David Edward Frank George Henry Ida John
king Lewis Mary Nancy Otto Peter queen Robert Susan Thomas
union Victor William x-ray young zebra

[Nowadays the ARRL endorses the NATO/ICAO alphabet]

Allied Services 1945:

Able Baker Charlie Dog Edward Fox George How Item Jig King
Love Mike Nan Oboe Peter Queen Roger Sugar Tape Uncle Victor
William X-ray Yoke Zebra

From a book entitled "The Complete Morse Instructor..." (1944):

able baker charlie dog easy fox george how item jig king
love mike nan oboe peter queen roger sugar tare uncle victor
william x-ray yoke zebra

[The same alphabet is described as "Used by Armed services of
USA & GB" in the ARRL 1945 Handbook. Entries cited in variants
of this alphabet: affirm, cast, hypo, inter, negat, option,
over, prep]

Western Union:

Adams Boston Chicago Denver Easy Frank George Henry Ida John
King Lincoln Mary New_York Ocean Peter Queen Roger Sugar
Thomas Union Victor William X-ray Young Zero

British Army 1927:

Ack Beer Charlie Don Edward Freddy George Harry Ink Johnnie
King London Monkey Nuts Orange Pip Queen Robert Sugar Toc
Uncle Vic William X-ray Yorker Zebra

Royal Navy 1917:

Apples Butter Charlie Duff Edward Freddy George Harry Ink
Johnnie King London Monkey Nuts Orange Pudding Queenie
Robert Sugar Tommy Uncle Vinegar Willie Xerxes Yellow Zebra

U.S. Army 1916:

Able Buy Cast Dock Easy Fox George Have Item Jig King Love
Mike Nap Opal Pup Quack Rush Sail Tape Unit Vice Watch X-ray
Yoke Zed

: Thanks in Advance!!!
: Brad

The class AB-1 tube/transistor conducts for less than 360 but more than 180 degrees and in the case of a tube amp does not draw grid current. In a class C amp the tube conducts for less than 180 degress, more likely around 90 to 120 degrees and the tube does draw grid current. The efficiency of the class C amp is higher that a class AB-1, generally 75% or so as compared to 50% or so for a class AB-1. The down side is the class C amp requires high level modulation for voice. It is fine for CW. The class AB-1, being a more linear amplifier can amplify a voice signal that was generated via a means of low level modulation.

Excutive Summary:

If you want to operate SSB, only class AB-1 will work.

Would you also guess that the circuit might be even less expensive if designed for 902MHz operation? I would welcome a copy of such a design, either band...could we prevail upon you to post one for us Gary? With an audio sub-carrier capability too please?

2663. contemporary multiband rigs QRP <-> QRO

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-17 23:35:05 UTC
From: dmunroe@vcd.hp.com
Message-ID: <CzFquH.LxM@vcd.hp.com>
Source record: 256618

Greetings all,

As a new ham, I'm trying to find my first rig; something that will be useful for many years as I upgrade and get more band privileges. I've decided that I want a multiband HF rig capable of modest power levels (50 watts would be fine) but also capable of qrp power levels (< 5 watts but being capable of < 1 watt would be great).

There seems to be a dearth of used equipment 'round these parts so I've been looking at new equipment in the catalogs and buyer's guides. One problem with that is that they don't show the minimum power levels. The Ten-Tec Scout 555 comes close to the above description, but are there any others?

-Dave

ZCZC AE68
QST de W1AW
DX Bulletin 70 ARLD070
From ARRL Headquarters
Newington CT November 17, 1994
To all radio amateurs

SB DX ARL ARLD070
ARLD070 DX news

The items is this week's bulletin are courtesy of Mike, K9AJ, Tedd, KB8NW, Steve, KU9C, the Yankee Clipper Contest Club PacketCluster network and the Contest Corral column from the pages of QST magazine. Thanks.

VIETNAM. Rolf, SM5MX, reports new legislation on amateur radio is in the works and is expected to be passed sometime in 1995. He has been issued the call sign XV7SW and granted permission to operate on fixed frequencies only. They are 3505, 7033, 14016, 14021, 21016, 21019, 28016 and 28019 kHz. His mailing address is Rolf T. Salme, Embassy of Sweden, Box 9, Hanoi, VEITNAM.

SEYCHELLES. A group of JA operators will be active from November 22 to 25. The calls S79CC, S79SS, S79TR and S79XE will be used. They will be on 160 through 10 meters and OSCAR 13. Modes will include CW, SSB and RTTY. On 160, check 1824 and 1910 kHz. On OSCAR 13 check 145.885 MHz. QSL via JI1NJC.

BOTSWANA. Dave, A22MN, is on 160 meters starting at 0300z around 1827 kHz. As propagation permits he moves to 3511 kHz, and then sometimes to 40 meters. He will be on during the CW weekend of the ARRL DX contest. Dave leaves Botswana in March 1995.

EAST MALAYSIA. Saty, JE1JKL, will sign 9M6NA for the CQWW CW contest on 20 meters. QSL via JE1JKL.

MADEIRA ISLANDS. DL5EBE, DL2HYH, HB9CRV and a few others will be on from November 25 to December 1. The CQWW CW contest is on their To Do list. Listen for CR3U by DL2HYH on 15 meters, CR3X by DL5EBE on 40 meters and CT3FN by HB9CRV on 80 meters. The DL ops will be signing CT3/ their home calls before and after the contest. QSL via home CBAs.

NEW CALEDONIA. Serge, F6AUS, will be active as FK/F6AUS from November 17 to December 8 on all bands, CW and SSB.

GLORIOSO ISLAND. Jacques, FR5ZU, will sign FR5ZU/G from November 17 to December 8. Asians QSL via JA8FCG. Americans and Europeans QSL via VE2NW.

EASTERN KIRIBATI. A group of JA operators will be active from here December 27 to January 2. Activity will be on 160 through 6 meters with CW, SSB and RTTY. There is a chance for some satellite operations. Jack, KD4ND, will be traveling to Christmas Island on December 3 for a 10 day bonefishing expedition. He has applied for a license and if it comes through, he will try to get on all bands, mostly on SSB. Some CW is possible.

SAINT KITTS AND NEVIS ISLAND. From November 17 to 27, John, WZ8D, and Joe, WB8GEX, will operate on 160 through 6 meters with CW and SSB as V476WZ and V47NF. A meter beacon, donated by WA8R, will be on 50055.5 kHz pumping 3.5 watts to a dipole at 1580 feet ASL. The beacon call will be V44K.

HONG KONG. Dave, WX3N, will return to VS6WO November 22. He plans to operate 80 and 160 meters daily starting at 1030z. On 80 meters try 3501, 3507 or 3513 kHz. He will simultaneously operate on 160 meters on either 1824 or 1833 kHz. During the CQWW contest he will operate VS6WO single op. Outside of the contest listen for him as VR2/WX3N.

GIBRALTAR. Jorma, OH2KI, and Peter, K8UNP, will both be active in the CQWW CW contest. Jorma will operate single band on 80 meter CW as ZB2X. QSL via OH2KI. Peter will operate single op as either ZB2/K8UNP or K8UNP/ZB2 on 20, 15 or 10 meters.

ANGUILLA. ND3F, WR3Z and ND3A, members of the Potomac Valley Radio Club, will be operating as a multi/multi entry during the CQWW CW contest. They will sign VP2EZA. Before and after the contest they will be on 160 through 10 meters with CW and SSB signing VP2E/ their home calls. QSL VP2EZA via ND3A. QSL all other calls via the respective operator's home CBA.

TURKS AND CAICOS ISLANDS. K8MFO, WD8AUB, W9VNE, W6RGG, WA4DRU, WT8N, W0CG, and WD8LLD will be active in the CQWW CW contest as a multi/multi entry as VP5VW. Operations will be from the QTH of Jody, VP5JM. Outside the contest, each operator will sign VP5/ his home call. They may be active as early as November 20. QSL VP5VW via W8TPS. QSL all other calls via the respective operator's home CBA.

BARBADOS. Steve, KU9C, and Ralph, K2PF, will be here on vacation December 8 through 12. They plan to be in on the ARRL 10 Meter contest as 8P9GD and 8P9GE, respectively. Plans are to concentrate on Pacific openings on 20 meter CW. Try around 14005 kHz between 2000 and 2400z. QSL via their home calls.

THIS WEEKEND ON THE RADIO. The 61st ARRL November Sweepstakes is this weekend from 2100z November 19 to 0300z November 21. This will be the phone weekend of the contest. See page 125 in October QST for full contest rules.

Keywords:

I'm new to amateur radio. Can you use an HT to autopatch to a fixed remote repeater through a Cross Band Repeater.

It seems that the constant phone carrier from the fixed repeater would prevent the Cross Band Repeater from being able to transmit. Is that true? If so, any way around it?

Thanks

Andy

From: US1RMC::"chuck.kraly@quelle.com" "MAIL-11 Daemon"
To: dx@unbc.edu
Subj: W0 qsl buro

Gentlemen,
Let me clear something up. I am secretary of the KCdx club who operates the W0 QSl buro. As of this dat WE HAVE SUSPENDED OPERATIONS. Now if the ARRL doesn't want to accept that, thats fine. I will not go into all the details because of possible litigation but, let me suffice it to say that a few of the sorters were accused of theft and we WILL NOT operate under these conditions. I sorted the letter "B" for about 1 year and one of the guys I sorted was one of the accusers, and was very beligerent with the present sorters WIFE on the phone not too long ago. This as many of you know, is a volunteer position and under no circumstances will we continue operations with the present allegations and the attitude that the Midwest director has regarding this issue. Also if anyone has contact with him, pse have him give me a call as I would like to relate some of the items to him if he is interested. PLEASE DO NOT use reflector bandwith to reply as this is a 0 district matter not a reflector matter. If anyone wishes to contact me in regard to this matter, I have posted my e-mail address at the closing of this letter. Gentlemen, this has been fun and we sincerly wish to continue, but not under these circumstances.

In case the average person does not know, the USA runs 10khz spacing on our AM broadcast band, while most of the rest of the workd runs 9khz. The only radio that I have ever seen that had a switch, either internal or external, was an older synthesized (i.e. keyboard tuned) GE Clock Radio (called the "Time Machine" - I'd love to find another).

Damas, I'd suspect it is programmed by a jumper or a solder blob bridging two printed circuit trace pads on the board somewhere. If you are technically inclined, I'd open up the radio and look at the circuit board around the main PLL chip for an obvious jumper function of some sort.

The other method would be some kind of a keystroke combination that you would normally not use otherwise: example - Control-Alt-Delete reboots an IBM PC clone - it's a key combination that would normally never be used. My ham radio Kenwood mobile uses an option setting method where you hold down a certain key as you turn the radio on - selecting different keys sets different options.

If you can get it, the best idea would be to get the service manual
for the radio.

And check rec.radio.shortwave, or rec.radio.broadcasting

Hi Greg, Is English your native language? If not, I'll try it in whatever it is. I'm clearly talking about otherwise qualified individuals who have a biological problem with audio tones and therefore Morse code. Case in point... an individual with 30 years experience as a broadcast station engineer with a commercial radio license who has tried for 30 years to get his Morse code speed up to 13wpm and failed. He has a tremendously high IQ and has forgotten more about RF than I will ever know. He was certainly denied access to publicly owned airwaves even though he was eminently qualified. His only sin was not being able to emulate a modem. My Dad is another. He can't carry a tune in a bucket and he cannot tell dits from dahs. If I had inherited his genes instead of my Mother's, should I be barred from the HF ham bands? Should you be barred if you had the problem? I almost wish you did so you would be capable of understanding and maybe even a quantum neuron of compassion.

Correct, Alan, that is usually the best way to go. It is extremely difficult remembering that N9xxx is at location YYY. Usually the operators will go the way Net Control goes. I had the opportunity to run net traffic for relief operations during the cleanup of the plane crash in Indiana a couple of weeks ago. Naturally, tactical descriptions were chosen for the sites that had operators. We had Canteen1, Canteen 6, and Canteen 8 which were relief posts for the Salvation Army operation. Whenever there was a shift change it got most confusing and people resorted to this is Canteen 6 with info for Canteen 1. And as net control I found that having those ducks in a row I could respond by calling: Canteen 1 - N9zzz, Canteen 6 - N9yyy has info for you. This is N9WHG net control. And by my using everyone's calls, it encouraged them also to follow that protocol.

Once we got into the shift, everyone was pretty familiar with who was where so callsigns were used. Obviously, we didn't have the large number of operators

at one time like the marathon did, but the combination of clear tactical calls combined with good net control operations helped make information flow and maintain legal requirements.

It also helped that Major Pat McPherson who headed the relief effort for the Salvation Army was also a ham. So we were ususally only a PTT switch from the chief.

I don't think it can be said enough that, in any kind of net operation, be it for an event like the marathon, an emergency like a plane crash, or just a ragchew net, the value of a net control operator who IS IN control is a valuable commodity. People recognize that and respect it.

From: Angelat <angelat@access1.digex.net>
Subject: ##Help my HT set the car alarm off##

Do you think the problem is EMI or electromagnetic interference? It's
possible. Putting the aluminum foil around the antenna creates a shield
from the conflicting waves. It's the same reasoning of why automakers
spend millions of dollars trying to shield its on-board computers. There
have been problems in the past of car locks locking, cruise control
speeding up and wipers turning on and off because of EMI.

I am doing some research into this area of why the metal coating does not
work always. Problems still exist with cars, and airplanes!

Also in hospitals. A 2-way radio triggered a hospital air alarm system
in Maine just this month.

Putting your AM station radio near a laptop makes the reception go bad.
Try it.

If anyone has any thoughts on this please send them
to me: angelat@access4.digex.net Thanks!

Angela

From: gruska@zeus.dcs.fmph.uniba.sk (Damas Gruska)
Subject: 9/10kHz step

Hi there,

I am not sure whether this is the right place where
to send my question put I have not found any better
one.

I am not a radio amateur. I have Aiwa walkman with
PLL synthesized receiver. I like it very much but
there is a problem with the receiver. I can tune it

only with step 10kHz but since I am in Europe I need
9kHz tuning. (for MW) I know that there is also almost the same
Aiwa model except it has 9kHz step tuning. Sine there
is no external switch for changing this step my question
is as follows.

Is it possible that there is a small switch inside
the walkman and it would be worthwhile to open it
and switch it, or the alternative model uses different
chips or so?
I mean could I easy change 10kHz step to 9kHz one?

I expect that would be the case that two USA/Europe
models differ just by a different position of an internal
switch.

Humm.. I guess I have never heard of the ATV mods for the Mirage Amps.
Coul you please supply me with the information for the mods? Mirage
sells amplifiers with the ATVN suffix on their model numbers that are
supposedly designed to work on ATV, no mods required. What type mods
are you doing down there? I don't have the Mirage catalog here in front
of me, but D1010-ATVN and D1010-ATVRN comes to mind here, or was it the
D100-ATVN, I just can't remember the model numbers right now.

Yes, I would imagine that any manufacturer would not honor a warranty
where some ham had been inside their equipment changing components. I
don't really blame them, do you?

Yes, you are absolutely correct. Perhaps I worded my message poorly
didn't I? I should have said "built for the 70 Cm band are DSB AM
transmittters...." Any amateur that operates a DSB transmitter on 421.25
without a filter is going to radiate signals outside of the amateur band.
The fact still remains all of the 70 cm transmitters currently built are
DSB AM transmitters. The filter is an option. Some hams use them, others
don't. In fact in this area, 421.250 is NOT a coordinated ATV channel.
We only have two, 427.25, and 434.0 Mhz. I happen to use VSB filters on
my ATV transmitters, but there are many hams that don't. I can't see
why you would blast the manufacturer because user of the equipment does
not use an optional filter. So what do you think we should do, blast
Yaesu, Icom, and Kenwood because HF operators don't all use low pass
filters and create TVI?

> >The VSB filter is an option to the ATV transmitter that is available

So which ATV transmitters and amplifiers do you suggest that we use Jay? Should we spend a few hundred bucks and use P.C. Electronics and Mirage with some filters, or do you think we should spend say 20 thousand and buy a Harris, or maybe an ITC? I'm sure those put out signals that are pure and clean. Please let me know what brands are best, I am very interested. Maybe if they are not too expensive, I'll try one out.

By the way, I am going to call Mirage tomorrow and ask them just what the heck that ATVN suffix on their model numbers means.

David Funderburk, K4TPJ, has been elected to the U.S. House of Representatives. Funderburk, a Republican, was picked for North Carolina's 2nd District, to fill the seat of a retiring Democrat.

Funderburk, 50, holds a Ph.D. and taught history at several North Carolina colleges before being appointed by President Reagan as U.S. ambassador to Romania in 1986. His expertise is in East European and Russian studies. He was a Fullbright Scholar.

K4TPJ described himself to Roll Call, a newspaper serving Capitol Hill, as an ''avid ham radio operator.'' He holds a General class license.

Funderburk and his wife Betty Jo live in Buies Creek, North Carolina.

No one has yet found an '!' that didn't turn out to be a shortcut symbol for computer-code programs.

Is one needed? International morse seems to have survived a long time without it. The customary HI HI to indicate exclamation is probably good enough.

Subject: No code Techs and CW...

Why can't we use another "filter" instead of CW? I would much rather work SSB than CW, but that's my personal opinion. What we need to do is eliminate the cw requirement if the operator is not going to use it. If someone wants to learn CW than let them. We have segments of the HF bands for CW use only. I didn't have to learn how to operate ATV, packet, or satellites to get my Technician ticket.

BTW, I have used tapes and software to try to learn CW, but it hasn't been much good. I do have a slight problem distinguishing tones. You can't say I am just another lazy no code tech. I have tried!

Subject: QST UHF noise generator

In the may 94 QST there is a UHF and microwave noise generator article.

My question is why is there a 2.2 pf capacitor across the output on the UHF version?

Granted, the reactance of a 2.2 pf cap @ 500 MHZ is only 145 ohms, but all I can see is that it would roll off the high UHF output.

Subject: Waveguide alignment?

Do amateurs have to worry about precisely
aligning waveguide? Why?

Its been my experience that for low power
amateur work, it has to look really terrible
for there to be a problem. You can actually
have air gaps or crooked joints and it still
works. This experience seems to be shared
by the people I talk to on 10 GHz.

Of course, 100 mile obstructed paths seems
to be about the limit for us--we need a good
path or a tropo opening to make 200 mile
contacts. I'm still looking for someone in
FLA or NC to try some really long contacts...

>out for an entirely new iron.
>- Rich

Yep, I use an old 60W iron, never had much trouble with it. I pick up good
connectors at local ham fleas. Look for name brands like Amphenol, Kings, etc.
Don't buy the nickel plated no-name junk that everybody sells cheap. As some of
you have found, the plating won't accept solder.

One trick I use is to lay the tip of the iron flat against the connector, then
rock it up on its point a little, just enough to poke some thin solder under

it. A little blob of molten solder under there makes a much better thermal connection than a dry iron... Resume soldering as normal.

Subject: wife's first radio

I see lots of articles asking what is the "best" radio. It all depends upon who you are and what you are going to do with it. Here is how I assisted my wife in purchasing her first radio.

1. I allowed her to determine if she wanted a mobile or hand held.
She wanted a hand held.

2. I took her down to the local candy store and asked the sales person to put all of the hand held radios out on the counter.

3. I then asked the important questions:
A. Which one or ones don't you like the looks of?
Away went several.
B. Which one or ones don't you like the feel of?
Again away went some more.

4. I then asked her to pick up and program several frequencies and ctcss tones into them.
There were some even the sales person had trouble programming!
Away went some more.

5. We were down to about 2 radios. I then asked my wife to listen to the sounds of the people on a local repeater. The final radio was determined. The radio that my wife bought was one that she liked the looks, feel and could program without help. She has since purchased a newer radio (dual band) but she still uses the one that I helped her purchase.

Unfortunately, in most cases, non-hams will not recognize the value of such a suggestion until you demonstrate that it can be valuable. ie: Assist them in a real search and rescue, then point out how valuable it would be to have such a system in place for future possibilities.

Many hams in NW Indiana and Chicago recently assisted in the cleanup and recovery effort of the plane crash on October 31. Fortunately the person in charge of relief operations, Major Pat McPherson of the Salvation Army, is a ham and immediatly called upon hams in the area to volunteer to provide communications support. Instant credibility - some nice press resulted from this for amateur radio.

You might enlist your District Coordinator for ARES to assist. This is not really their ball of wax, but they might be able to give the necessary information (stories) to convince the Forest Service or whoever of the benefits here.

>

Hey wait a minute here... I think I have found something that you *may
not* be up to date on. P.C. Electronics *does not* sell modified
Mirage Amplifiers. The fact is that Mirage makes several models that
are made (modified) specifically for ATV. I believe the correct model
that you listed above would be the Mirage D1010ATVN amplifier.
As a matter of fact, you will find that Mirage has several amplifiers
with the ATV suffix in the model number that are designed for use with
ATV. There are two though, the D15, and the D26, that do not use the
ATV suffix after their model number. I did look at my Mirage brochure
today, and the D15, the D26, and all the amps that have the ATV suffix
state that they are "specifically designed for use with ATV". Hey Gary,
welcome to 1994. I believe what happened while you were out bashing all
these ATV manufacturers was that P.C. Electronics and Mirage got

together and came up with a design of a few amps that would work with
ATV.

> >I'll bet that you will find that the LSB has been re-inserted during the

>

I really sort of doubt that the wonderful VSB transmitter was causing
any Mirage amp to be over driven. I kind of believe that maybe the
wonderful AEA transmitter wasn't as wonderful as they wanted us to
believe. Hmmmm, I wonder how come AEA quit making that wonderful
little device after a short period of time?

> >Are you saying that Harris and the other TV big boys are not using any

Well, ok, I'll take your word for it. I'll have to take another look
see at the local LPTV channel 57 transmitter. I could have sworn that
I saw something in there besides a harmonic filter, but I am not an
expert at such things like you are.

> >Since you are going to bash PC Electronics for manufacturing and selling

>

I happen to have ordered a couple of transmitters from P.C. Electronics.
Both times, they questioned me to make sure that I knew that without
the proper filtering that I would be radiating my signal outside the
amateur band. As far as I am concerned, they did their job. P.C.
Electronics makes the transmitters, and other folks make the filters.
Thats pretty simple isn't it?

I happen to use interdigital filters made by International Crystal Mfg.
I'll bet you have heard of them, did you know that they make filters
for ATV? Yep, they cost me about $425.00 each, if I remember right.
Expensive little buggers.

While we are at it, lets slam the makers of H.F. transmitters for not
including low pass filters on their gear. Lets slam the makers of
television sets for not including high pass filters on their receivers.
Lets also slam those folks down on 80 meters using DSB AM to communicate.
Lets slam the makers telephones for not including filters to keep out
all of us hams that generate nasty signals with our improperly
manufactured equipment. While we are at it, lets slam the manufacturers
of our modern two meter radios, not only have they made it a simple snip
of a wire to transmit outside of the amateur bands, but they have made
the receiver front end so broad that they are almost totally useless
when they get near a medium strong RF environment. I think we should

also slam the makers of home computers, when I get my UHF hand held near
the darn things I hear all sorts of nasty noise. Ah what the heck...
let's just slam everybody, I'm not sure if any of them are doing things
right and following good engineering practices, are you?

> >I have a great idea. Since there are no amateur VSB ATV transmitters

Hey, great! Would you mind sharing your designs and schematics? We are
in the final process of linking our ATV system with the Fresno area on
2 Ghz FM. You could save us a large sum of money over what we are planning to
purchase. I am not into RF design like you are, but I love to tinker and
build stuff.

Would you also include your designs and schematics for the 70 cm
70 CM transmitter. We are going to continue out here to improperly
utilize our resources. Heck, if we could build our own from your designs
and schematics, we could quit buying that garbage from P.C. Electronics

and others. According to you, we could also quit buying those damned expensive filters from International Crystal. I'll bet they are not going to like this at all.

I hope all the parts that I'll need are readily available. I live in the sticks out here, and I would need to be able to order the parts without having to make a hundred phone calls to find out who has what part.

SUBJECT:Graphic Equalizer as an Audio Filter?
Newsgroups: rec.radio.amateur.misc

MA>Is this simplistic or what?

MA>Why can't I take a $5 garage-sale Graphic Equalizer, place it between
MA>my Rig and Speaker, and use that as an Audio Filter. Sure, it's not
MA>going to notch, and the skirts aren't steep, but it's inexpensive!!!

MA>Thanks for any reality checks on this.

MA>Mark KB2els
MA>mccuistion@attmail.com

Mark, that MIGHT work, but remember that MOST graphic equalizers work at
line level, not at speaker level. You might have to use an amplifier to
drive the speakers unless there is one built into the equalizer itself.
Also, did you know that there are some much better quality audio
filters/equalizers out there that are pretty inexpensive too?
FOr example the AUTEK QF-1 or QF-1A. I see these going for $25-35.00
on the used market. Some guys ask $45-50 but that is too high for an
item that sold new for $60-65. They work fairly well, but do not
approach the characteristics of a SCAF or the best crystal filters used
in a receiver I.F. stage.

• SLMR 2.1a • I gave my argument to the judge, Tom said briefly.

Could you let me know more about the problems with your FT-5200. I have an FT-5200, and have found 70cm to be completely unuseable in the West End and City of London due to breakthrough from various commercial services right across the UK repeater output sub-band (433.0 to 433.5)

I took the rig back to Yaesu UK recently and complained about both this problem and also the lousy transmitted audio on 70. They found and fixed a fault which fixed the transmitted audio problem, but the rx performance on 70 is as bad as ever.

I don't use 2 metres a great deal, but one observation on the 2 metre rx is that when on standby on the UK mobile calling channel (145.500), I get a lot of breakthrough from a local (Slough, 30 miles West of London) paging system.

Would also like to know yours and others general experiences with the 5200 (and 5100) - from my own experiences, and comments of others both on the air and on Usenet, the 5100/5200 is probably the worst rig Yaesu have ever produced!

My ticket arrived yesterday. After a 25 year hiatus (a novice in 1969) I am back. BTW I took the test on 10/8/94, the license was effective 11/4/94. The FCC seems to have taken care of the major backlog that existed a few months back.

>It seems that the constant phone carrier from the fixed repeater would
>prevent the Cross Band Repeater from being able to transmit. Is that true?
>If so, any way around it?

If your cross-band rig has a one-way only mode (for example, the
TM-741 does this), then you can transmit through the crossbander, but
receive directly from the repeater. That assumes that you can hear
the repeater directly with your HT, which is often the case.

This, in general, is a way to be able to use your crossband rig on
repeaters with long hang times. Furthermore, it makes it easy to
satisfy the FCC's ID requirements, since you are only retransmitting
your own signal, and presumably you ID when transmitting from the HT.

>The reason the government regulates the electromagnetic spectrum is
>that the spectrum is a limited resource: if I'm your next door
>neighbor and I'm using a given frequency, you can't use it. To
>minimize conflicts, someone (the FCC) is given authority over the
>spectrum.
>

Well, it is not just the fact that spectrum is scarce or limited. There are
many scarce things, such as diamonds, and one-of-a-kind items such
as Van Gogh's Sunflowers for which markets function quite
well. The critical factor is the effect that one consumer's decision
can have on others. If I transmit then I affect others because of the
broadcast nature of the medium. Eg: Radio Free Europe and the 14313 mess.
Such effects are called externalities and the markets cannot deal with
them effectively. This is because the consumer making the choice does
not face the complete cost or full benefit. Indeed, these are called
market imperfections. Hence the "demand" for regulation. Other examples
of externalities include pollution (negative) and keeping a beautiful
front garden (positive).

>Now let's talk about radio, shall we?

Sure.

Source record: 256455

In article <3a87fn$o18@crl10.crl.com> arthurc@crl.com (Arthur Chandler) writes:

As I work on my code, I note that I can do the slow speeds at 100%;
then it falls off more and more, until I find myself at 30-40 % at 20
wpm. No surprises here; but this is my question:
I've heard it said that, for the examinations, being able to receive 70%
of the code sent is what you need to figure out the multiple choice
options. So, in terms of strategy, here's the question:
Should I work on a speed until I get 70% accuracy, then up the tempo a
couple of notches? Or should I stick with each speed until they are close
to 100%?

My best challenge-point was 80%, four out of five. I'd adjust the speed of my
random code generator to maintain a constant 4/5 success rate. Some days I'd
do well, some days, not so well, but overall the speed went up. When I was
doing 80% at 22wpm I felt comfortable taking the exam. It worked.

I enjoy reading and word games. Those practices developed skills that made the
word recognition easier. (If you're missing 1 out of every 5 letters, you'd
better be good at word recognition.)

Good luck. Let us know how it went.

2693. 9 kHz AM tuning steps

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-18 16:13:53 UTC
From: Wayne_Estes@csg.mot.com
Message-ID: <9411181008.ZM9871@SALCIUS2>
Source record: 256442

Damas,

I have a Sony walkman which can be initialized in 3 different tuner modes (USA, Europe/Asia, or Japan) by pressing different keys when installing the battery.

1. Remove all batteries for 30 seconds to make sure the computer resets. (be sure to remove the small memory backup battery if there is one)
2. Press one key while installing the batteries.
3. See how the tuner operates.
4. Repeat as necessary, maybe even pressing two keys simultaneously while installing the batteries.

I doubt there is a switch inside, but maybe you can find a way to re-initialize the computer to tune in 9 kHz steps.

Good luck! Wayne Estes WD5FFH wayne@csg.mot.com

2694. VE3ONT '94 Schedule

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-18 16:26:06 UTC
From: MOWE@SLUMUS.STLAWU.EDU
Message-ID: <18NOV94.12349993.0084.MUSIC@MUSIC.STLAWU.EDU>
Source record: 256494

The Big-Dish operation of VE3ONT during the upcoming EME contest will take place as scheduled. We will transmit on 144.100 and listen between 144.100-144.110 for both days of the contest (UTC days November 26&27). We will be running full legal power into the 46m (150') dish at Algonquin Park, Ontario (grid FN05xw). The lower elevation limit of the dish is 9 degrees, so our Moon access is somewhat limited.

VE3ONT is especially interested in working small stations. Therefore we will "work through" the bigger stations as rapidly as possible. We plan to do SSB for about an hour at Moonrise and from time to time thereafter. If you want to work us on SSB, please wait until *we* change modes.

Please do not request multiple QSOs, even on different modes, because this practice reduces the chances for small stations to work us. We will actively avoid dupes.

Small (OSCAR-class) station may want to delay their attempts until somewhat later in each Moon pass to avoid QRM. Lastly, avoid calling VE3ONT on 144.100.

Our QSO format will be rapid-fire. We will avoid RST signal reports, relying on the "T-M-O" method. VE3ONT will have no skeds, no "special" listening frequencies, and will not be available via telephone.

And now, the bad news:
There will be *NO* pre-contest operation. We had hoped to activate 50 MHz or 10 GHz but this is not possible. Please notify others that VE3ONT will not be on the air on any band prior to the EME contest.

As users of a non-amateur antenna, VE3ONT is not in competition with any other stations. We hope to work as many stations as possible, including you!

As for the 'dedicated' freq for emergencies, a few months back in an issue of QST, someone suggested checking 146.52 simplex at the following local times: 0700, 1000, 1300, 1600, and 1900. The times were suggested so that you would have people listening just after the times that mishaps were most likely to occur, and that you wouldn't have to kill your battery by repeating you calls for help during times that no one would be listening.

It was also suggested that hams who live near areas with many hikers (etc...) try to monitor this freq whenever possible, just in case.

Thanks for the lucid tutorial. Do you plan to follow it up with a discussion of decibels used for voltage and current ratios? That is the part people tend to find confusing!

I have always been under the impression that the logarithmic measure of power was introduced because it mimics the response of the human ear.

I seem to recall that early runs had feedback from a coax rf-link somewhere (obviously between backplane board-sockets or to the P.A. chassis in back). The solution in later revs was a bypass cap and maybe additional cable ground attention. These revs and some mods were reported in an article ten or fifteen years ago in one of the main U.S. ham magazines. Somewhere I have this stored but no longer recall where. Some O.M. might have this info handy; the 210/215 is still a great mobile rig with these simple upgrades. 73's Jim K9ZAT.

>the confused!!!!!!

There are 4 basic classes of amplifiers (and several off the wall
classes I'm going to ignore). Those classes are A, B, C, and D.
These classes are determined by how many degrees of the signal
cycle the active device conducts, and whether the active devices
are driven into saturation during the on state.

The Class A amplifier conducts for the full 360 degrees of the
signal cycle. The active device remains biased in the linear
portion of it's operating curve at all times. This class of
amplifier is not very power efficient (theoretical max 50%,
practical around 25%), and is typically used for low level
amplifiers such as microphone preamps and other small signal
amplifiers. The amplifier requires no input drive power
other than that required to overcome input circuit losses.
It is never saturated.

The Class B amplifier conducts for exactly 180 degrees of the
signal cycle. If used with active devices in push-pull pairs,
it can offer linear amplification of small or large signals.
If used single ended with a tank circuit of appropriate Q (greater
than 5), it can serve as a linear large signal RF amplifier.
Efficiency is much better than Class A with the max around
60%. This type of amplifier is best used where signal drive
never drops to zero, otherwise the amplifier may suffer from
crossover distortion. It is never driven into saturation.

The Class C amplifier conducts for less than 180 degrees, often
for as little as 90 degrees. Drive is such that the active device
reaches current saturation during its on pulses. This class of
amplifier is efficient, but not linear. It can't be used to amplify
amplitude modulated signals like SSB or AM. It's fine for FM or CW,
and can be high level plate modulated to generate AM. Driving power
required can be significant.

The Class D amplifier is a switchmode amplifier. It typically
conducts for very much less than 90 degrees, but does so several
times per cycle. With the proper smoothing filter on it's output,
it can reproduce amplitude modulations with good fidelity. It's

very efficient. It's also complex.

A Class AB1 amplifier is an amplifier biased so that it conducts for 360 degrees for low level signals and for more than 180 degrees for high level signals. It's a compromise between the Class A and Class B types. Its efficiency is good, and it can reproduce large signal amplitude modulated RF with good fidelity providing it's used with a tank of appropriate Q (>5). Because it operates essentially Class A at low signal drive, it's particularly suited for SSB service where signal amplitude can drop to zero.

The practical efficiency of a solid state Class AB1 amplifier can approach that of a practical solid state Class C amplifier while requiring much less drive. That makes it generally the best choice for VHF amplifiers used for HTs or for multimode radios.

Does anyone actually know the pass rate for each of the written exams, on a nationwide average, or at least for a statistically-meaningful sample?

Our current VE team leader may have such statistics for the long term - I know he generally publishes (or at least tells us) the pass/fail rates after a session also - and I think the ARRL VEC has published such information in the past.

All the numbers I have seen are always skewed downward, since candidates who have paid their money can take as many test as they want till they fail, so though they may have gotten the license they came for, they may have taken the element for the next grade of license on spec and failed (I've done it each time I've tested).

Also retakes (where the candidate must pay another fee) are usually counted in the statistics as separate candidates.

Cross-posted to: rec.radio.amateur.misc,alt.home.repair,misc.consumers.house

A very naive question: I was planning to have our tv antenna removed while roofers are on the roof anyway, since cable gives much better reception. But would the tv antenna be useful for fm radio reception? If so, what kind of wiring would be best?

thanks for any advice,

Delco does make superior receivers! However, the situation you described where you were able to receive a distant am station w/out being blanked by a nearby 50KW station operating 80khz away could be due to other conditions as well. You may have been in a Null field since AM stations are directional; also, you may be way under their main lobe due to the their angle of radiation and your position. One way to know is to make some strength measurements at the spot in the parking lot; or, might drive around the area around the transmitter and see if you have the same experience at varing distances and locations.

Howdy,

Does anyone have knowledge or experience with the "new" RCA
satellite system. It uses a small, 18" dish and I believe
it operates above 10 Ghz. I'm seriously considering this
system as a viable alternative to CATV and standard VHF/UHF TV.

What impact does weather have on such a system. I've heeard that
signals >10Ghz experience substantial signal attenuation in
rain.

Thanx for taking time from your busy day to read and/or respond.

>designed for 902MHz operation? I would welcome a copy of such a design,
>either band...could we prevail upon you to post one for us Gary? With
>an audio sub-carrier capability too please?

The problem with doing it at 902 is that there isn't enough bandwidth
available to make good use of the FM threshold improvement. You want
a modulation index of at least 5 to take best advantage of the threshold.
That means a signal bandwidth of about 30 MHz. So it's necessary to
venture up to the microwave bands to find that. Fortunately, active
devices that operate at 2.3 GHz aren't very expensive anymore, and
really high gain antennas aren't prohibitively large.

I'll whip something up and put it up here in the next few weeks
since several people have asked for it.

>could really prove their worth and defend their use of the airwaves. Any
>suggestions? Am I totally out of touch with reality? What about ARES and
>RACES - where does this fit in?

This idea has been floated before. Unfortunately, there are some problems.
The first problem is that hams generally won't monitor a channel they
don't use. The second problem is that individual ham stations often don't
have very high or very well located antennas. So the consensus seems to
be that emergency calls should be done via repeater since there's more
likely to be a ham monitoring, and because the repeater generally will
be in a higher location and have a better antenna.

The ARRL has a system called Long Tone Zero that they recomend for
emergency alerting. What that is, is a couple of seconds of the
zero TT signal. Decoder circuits have been designed to unmute receivers
on reception of the signal.

Yes, you can use your tv antenna for FM radio. In fact, the sound portion of your tv is brodacast on the upper FM frequencies (you may have seen that you can actually buy a radio that receives tv stations as well as am/fm). The standard flat lead 300 ohm cable is fine. Anything more expensive is probably not worth the cost unless you have a major power line interference problem.

On some of the JA contests, you are required to send your age as
the check.

Multi-ops send 99, and YLs can send 00 if they are reluctant to
reveal their age (no kidding).

I have found that the median age for the JARTS RTTY contacts I've
made to be somewhere around 50! And I don't remember working a
00 on JARTS :-).

2720. DXbase Problems; An Update

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-18 22:19:17 UTC
From: mikewood@mercury.interpath.net
Message-ID: <3aj995$l12@mercury.interpath.net>
Source record: 256495

Thanks to all those who responded to my posting regarding problems with the DXbase program's reliability of the RS232 link for HF radio control. I have had this problem for two years . The recent Internet posting came about because a friend , K5ESW (to whom I had recommended DXbase about 18 months ago) , was conducting a survey on PacketCluster regarding this particular DXbase anomaly. He did not have Internet access so I offered to post his survey to Internet for him in order to broaden the pool of respondents.

Many DXbase users may actually have the problem and not realize it. If you have Dxbase set up to control your HF rig and are using it to autopopulate the BAND field when you log a QSO you might be mislogging the BAND without knowing it. DXbase doesn't alert you when it loses the link to the radio when you are logging a QSO and will autopopulate the last band (or the default band) into tha band field instead of the actual band as read from the link to radio. The only 'notification' you get is that the exact frequency does not get autopopulated into the notes field. It is my opinion that DXbase should either automatically reinitialize the link to the radio before it executes any task that is supposed to use information derived from 'reading' the radio status. This is especially important in the 'ADD QSO' mode. If it can't establish the link there should be a positive visual and audio alert that the radio link has failed. This feature is present in other less important 'modes' of the program.

You can check to see if you may have had the problem in the past by reviewing the "notes" field of your chronological log. If some of your QSOs are missing the autopopulated frequency in the notes field there is a good chance that the QSO's BAND entry may be wrong unless it is a QSO for which you manually entered the Band with the radio powered off or logged while you had the USER SETUP ' RADIO' field set to 'none'. I found about 2% of my QSOs were mislogged due to this problem. I discovered it when I began receiving QSLs back marked 'wrong band'. K5ESW recently discovered he had the same problem.

It was hoped that if the problem was being experienced by others, we would find someone who had found a universal workaround solution.

Some suggested workarounds that were received are now being tested.

In the meantime I have received a message from W8ZF , one of the programmer/owners of the company that wrote DXbase. An unedited copy of that message follows:

Mike,
There are a number of fine dx logging programs on the market.
If DXbase is as bad as you say, I suggest you don't wait for
another one to come along so that you can "switch in a minute."
Might I suggest DXlog, WB2DND, WJ2O, Turbolog (DOS) and the new
MFJ for Windows and the AEA program for Windows. They all
CLAIM to have the features and performance of DXbase.

Despite numerous calls and mailings and direct interface and
service, you whine like a jet engine. Please go try our
competitors' products and take your griping with your. You
are an ungrateful cuss who is po'd because we didn't give you
the answer you wanted to hear regarding your serial port
problems.

PLEASE -- go bother our competitors and take your griping
with you!

Thanks.
Dean W8ZF

<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<
<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<

Perhaps the attitude of the above response explains why it
was necessary to resort to a survey of users to try to solve
the problem.

Actually there have not been "numerous calls and mailings and
direct interface and service" as claimed in the above message.
Rather, I was told on my very first call to him (2 years ago),

that my problem was with my hardware or IRQ conflicts and that
"this problem is rare".
I had already tried the program on other PCs I own and they exper-
ienced the same problem , so I knew the problem wasn't specific
my hardware. I told him this during the phone conversation. He
asked me to upload my config.sys and autoexec.bat files to his
BBS and he would look them over and make recommendations. I did
this but never got a response. In 1993 I asked via PacketCluster
messages if others were having similar problems. Several people
did but no one had a universal workaround.

There has never been an attempt by the DXbase programmers to
work with me in resolving the problem. They considered the problem
as unique only to me when I know from communications with other
DXbase users that it is not.

I don't think DXbase is a 'bad' program. On the contrary, I think
that for my use it has the best combination of features and the
best overall user interface of the programs that I have seen.
It does have some very annoying problems and attributes though.

It's the uncooperative , POOR USER SUPPORT that I have a problem with.
I have already purchased and tried 5 different I/O cards on three
different PCs (two 386 and one 486) so it's not true that I "didn't
like the answer I got". I attempted the recommended corrections (and
lots of unrecommended corrections too) but they did not correct
the problem.

I have been unable to establish a dialogue with them and so I have
had to resort to other forums to attempt to find remedies.

If there is genuine concern from the software authors regarding
identification and resolution of the problem I invite them to
contact me with an open mind and cooperative spirit.

Meanwhile if you find you have the problem , let me know and
I'll put you on the mailing list for any workaround solutions
to the problem.

2724. How Do I Convert Local Time To UTC Time

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-18 23:33:49 UTC
From: Wayne_Estes@csg.mot.com
Message-ID: <9411181733.ZM14147@SALCIUS2>
Source record: 256721

Please disregard this nonsense:

> It's easy. First convert regular time to MILITARY time. 1 pm would
> be 1300 hours, 2 pm is 1400 ETC. Now, ADD 5 hours to that and BINGO! UTC!
> In the spring when we "Spring Ahead" instead of adding 5 hours add 4.
> 5:00pm your time is 2200 UTC. 7:00pm is 0000 UTC from the time we "FALL
> BACK" until we "Spring ahead". When we spring ahead in the spring 0000
> hours is 8:00pm. Hope I helped!

The time in Arizona is *always* 7 hours earlier than UTC time.
Tom Sunman described how to convert UTC to U.S. Eastern Time.

ARLB092 Election results

The ARRL Committee of Tellers for the election of directors and vice
directors for the 1995 through 1996 term met at ARRL Headquarters
November 18 to count ballots. Here are the results.

Central division for director,
Ed Metzger, W9PRN, 2821.
Neil Rapp, WB9VPG, 1793.

Northwestern division for director,
Mary Lou Brown, NM7N, 2955.
Mary Lewis, W7QGP, 1505.
Don Clower, KA7T, 471.

Roanoke division for director,
John Kanode, N4MM, 3073.
William Jacobs, WA8YCG, 509.
Edward Dingler, N4KSO, 407.

Rocky Mountain division for director,
Marshall Quiat, AG0X, 1371.
Ted Colby, W0RA, 507.
Whit Brown, WB0CJX, 443.

Central division for vice director,
Howard Huntington, K9KM, 1951.
Mike Hoshiko, W9CJW, 1579.
Ken Ebneter, K9EN, 1059.

Northwestern division for vice director,
Gregory Milnes, W7AGQ, 2506.
Clay Freinwald, K7CR, 2301.
```

Roanoke division for vice director,
Dennis Bodson, W4PWF, 2758.
Robert Pattison, KM4DU, 1190.

In each case the candidate receiving the greatest number of votes
was declared elected. The terms of office are for two years,
beginning at noon January 1, 1995.

SB PROP ARL ARLP048
ARLP048 Propagation de KT7H

Solar flux was down a few points last week, hovering around 80. Geomagnetic disturbances were also down, with the A index in the single digits.

Solar flux should rise about 10 points over the next week, and then drop below 80 through mid December. Active geomagnetic conditions should return around November 20 and 21, and there is the possibility of a geomagnetic storm around November 27 and 28.

The latest long range forecast shows solar flux an average two points lower a year from now, and 13 points lower two years from now. The current solar flux cycle is now expected to reach minimum around October, 1996, with a sunspot minimum around May of that year. Current projections show the next solar flux cycle peak around August, 2000.

Sunspot Numbers for November 10 through 16 were 45, 45, 69, 11, 11, 11 and 36, with a mean of 32.6. 10.7 cm flux was 80, 79, 80.2, 81.2, 78.7, 79 and 79, with a mean of 79.6.

This week we have a special forecast for Sweepstakes with two domestic path projections.

The path from Seattle to Arizona should be open on 80 meters from 2245z to 1600z. 40 meters will probably be open around the clock, with the best signals from 0630z to 1100z. 20 meters looks good from 1700z to 2300z. 15 meters does not look good over this path, except for possibly around 2000z.

The Illinois to Florida path should be good on 80 meters from 2100 to 1330z, and 40 meters around the clock. Check 20 meters from 1430 to 2100. There is a possibility of an opening on 15 meters around 1730 to 1900.

Source record: 256724

<3aj9mu$p9v@news.CCIT.Arizona.EDU>
Organization: Eskimo North (206) For-Ever

Instead of having to try and make the conversion numerically, and have to factor in whether or not you are currently on daylight savings time, it is much simpler to just turn on WWV/WWVH on 2.5, 5.0, 10.0, or 15.0 MHz (depending on the propagation). They broadcast the "Coordinated Universal Time" (UTC or Zulu time) once a minute.
-
Once you have the UTC you can add or subtract your local time and figure out the difference to add or subtract which applies until the next time a daylight/standard time transition occurs.
-
As a matter of good DX-manship, it is standard practice to immediately go to WWV/WWVH after logging some "all-time new one" to verify that your shack clock has not gotten somehow out of whack. This is a good double check on your time logging and can prevent a "not in the log" response to your QSL from some rare spot that may not again be activated for 10 years.

I *Totally* agree with you. The 5100/5200 has to be the worst rig Yeasu has ever produced. I'm very dissaponted with it. I've noticed other problems with it. The main problem would probibly be the poor intermod rejection. The second (and this really sticks in my craw) no audio amplification. I had to add an external amplified speaker just to use it on a day to day basis. The intermod is so bad on 2 meters I usually turn the rig off and monitor with my Rs Htx 202 (of which I am very much more happy with). I think it's crazy that after spending $600+ us dollars on a rig, I'm still not happy.

I *KNOW* I'm writing a letter to Yeasu, and I *KNOW* I'll never buy another Yeasu product again. I knew I should have stuck with Kenwood.

Not quite! (Actually it's simplers...) Because the original poster is
in Arizona, he (or she) must add either seven or eight hours (I forget
which--Mountain time is seven and Pacific is eight...). It is only five
hours for those of you living in the eastern US.

Because Arizona never goes to Daylight Savings Time, they never change
the amount they add to get to UTC. They, and the part of Indiana in the
Eastern time zone, are the only parts of the US that are this way (I
believe)...

I used to have a TV antenna (VHF) and used it to pull in weak FM stations using either the 300-ohm wire (connects direct to the back of my receiver) or 75-ohm cable with a 75-300 ohm converter. Worked great for me!

Funny I have a FT5200 (USA sourced model) and have little trouble from
breakthrough and intermodulation even though I live in an area bristling
with commercial antennae (Highgate N6)

Have you checked YOUR antenna lead - a possible cause is a non-linear
corroded connection. My only wish for the FT5200 is that they don't
make a wired mike which remote controls like the wireless one.

>experience at varing distances and locations.

You can drive anywhere in the area with the same result. OTOH, there
is another AM station in town (5 kW) that's incredibly dirty. If you
drive anywhere within half a mile of it the entire AM band is blanketed
with interference. Even at my house 28 miles away, its third harmonic
is S9+20db. Due to political (correctness) considerations, the FCC's hands
have been tied in doing anything about it.

|> call sign_ on its transmitting channel at the end of each communication,
|> and at least every 10 minutes during a communication..." The FCC doesn't
|> assign tactical callsigns!

Yes, you must identify with your FCC-assigned call sign every ten minutes, but as has been pointed out many times already, you can *also* use tactical call signs. For instance, you can use tactical call signs for the ease getting ahold of who you are looking for, but everyone must use their real call sign every ten minutes. So, you could call someone by their tactical call sign, and give yours so they know where you are, but then at the end of the exchange (or within ten minutes, but at then end is probably easier--as long as the exchange isn't ten minutes long...) you would give your FCC-assigned call sign.

This is certainly legal.

: This may or may not be a very annoying question for you all, but
: i was just curious of the typical range that one would have with a
: tech. no code lcense? If i got it, it would probably be just to talk to
: my dad, who is approximately 250 miles away (across some pretty flat terrain,
: if that matters).

Bob:

The tech license give you priviledges above 50MHZ. Typically, you
won't be able to maintain reliable direct communications with another
station that distant, with rare exceptions. Your mileage may vary. :-)

However, the tech license does permit you to use several of the amateur
radio satellites, as well as packet radio. Assuming that you have a
computer, you can purchase a VHF transceiver and a TNC (Which is,
essentially, an intelligent modem designed for use with radios) for a
few hundred dollars. You should be able to exchange e-mail with your
dad, although with somewhat less reliablity and longer delays than the
internet. :-)

Satellite equipment is more expensive, although not excessively so,
especially used. I'll leave it to someone else to explain about satellites.

>I am trying to figure out how to relate UTC time to the time where I
>live which is in Arizona. In arizona we never go on daylight saving time,
>etc. So if it is 5:00 pm here in Arizona what would the UTC time be?

We are lucky here in Arizona because the conversion is always the same.
UTC is always 7 hours ahead of Arizona time. 5:00 pm is 1700 military
time. Adding the 7 hours that UTC is ahead of Arizona gives 2400 or
midnight of the same day. 6:00 pm is 1800. Adding 7 hours gives 25 so
an overflow of one day has occurred. Subtract 24 and you get 0100 for
UTC or 1:00 am in the morning of the next day there because of the 24
hour overflow. Some say the overflow occurs exactly at 23:59:59 plus
one second to give 00:00:00 at midnight. At Texas A&M we said it was
twenty four hundred hours at midnight.

That's funny. Perhaps it's a problem specific to certain phases of construction the serial # on my 5200 is (2d)180461. Please advise me of your Sn. If it is later, perhaps they have fixed or can fix the problem. As for the poor audio output (speaker) that's just poor design. They should know after being in the radio trade for so long, that good audio output on recieve is very important, especialy in a mobile rig.

I was considering selling the rig, but I would feal bad doing so. I would never wish the problems of this machine even my worst enemy, and would never want to hear whoever I sold it to after they used it and found it to be so poor.

As for use on 70cm, I never had any problems.....

I don't know where you got the idea that TV audio is broadcast in the FM broadcast band, but it *is not* in that band.

Television audio is always 4.5 Mhz above the video carrier frequency.

The FM broadcast band is 88 to 108 Mhz. Depending on the TV channel you are watching or listening to, the TV audio would be either above or below the FM broadcast band. In fact all of the UHF TV channels are above 470 Mhz, and the UHF TV band ends at near 800 Mhz.

Now back to the original question. If you are using a VHF TV antenna, and listening to local FM stations, then it would probably work fairly well. If you only have a UHF TV antenna, such as we use here in Central California, then the TV antenna would make a very poor antenna for the FM broadcast band.

Most VHF TV antennas are of the log perodic design, and are probably broadbanded enough to do fairly well for FM broadcast band reception.

In fact, if I am not mistaken, some TV antennas are advertised as UHF/VHF/FM antennas. I don't know if they have extra elements for the FM band, or if they are just broad enough to cover that band also.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 19/2330Z NOVEMBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 19 NOVEMBER AND FORECAST FOR 20 NOVEMBER - 22 NOVEMBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 78/17

GOES satellite data for 18 Nov
Daily Proton Fluence >1 MeV: NA
Daily Proton Fluence >10 MeV: 1.2E+04
Daily Electron Fluence >2 MeV: 4.2E+06 (normal)
X-ray background: A3.1
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
20 Nov 21 Nov 22 Nov
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 20 Nov: 78/17

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled

Estimated Indices : A K Observed A Index 18 Nov
Learmonth 15 3333 3333
Fredericksburg 14 5
Planetary 15 6

Observed Kp for 18 Nov: 1112 3221

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
20 Nov 15 Unsettled
21 Nov 15 Unsettled
22 Nov 8 Quiet to unsettled
COMMENT: Mostly unsettled levels are expected 20-21 November due to a
coronal hole.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
19 Nov fair-normal fair-normal fair-normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
20 Nov fair-normal fair-normal fair
21 Nov fair-normal fair-normal fair
22 Nov normal normal fair-normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
19 Nov 33 15-30% enhanced during the local day and near
predicted monthly values during local night,
at both low and mid lats.

Predicted Monthly T-index for November: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
20 Nov 30 Mostly near predicted monthly values, with occasional
enhancements of 15-30%.
21 Nov 30 Mostly near predicted monthly values, with occasional
enhancements of 15-30%.
22 Nov 30 Mostly near predicted monthly values, with occasional
enhancements of 15-30%.
COMMENT: Sporadic E layer was regularly observed yesterday at low and
mid lats and is expected again at times today. Propagation conditions
appeared fair to good at low and mid lats and are expected to remain
so today.

Actually, most any VHF TV antenna should work OK for FM broadcast reception.
The FM band is between VHF channels 6 and 7 so, while the TV antenna isn't
optimal, you should receive FM pretty well, unless you buy one of those
RS types where they intentionally put a narrow filter to attenuate the
FM band.

This may or may not be a workable idea. Many television antennas are designed to block out FM signals, because FM would cause interference with TV reception. Some television antennas can be used for both purposes: there's one set of outputs for TV, another for FM. I'm told, though, that for the very best FM reception, you should use an antenna that was specifically designed for FM. They make directional and omnidirectional FM antennas, and those who are in a weak signal area, or who want to pull in a particular distant station, should consider a directional antenna aimed toward the city or station that interests them. I don't know if you're looking for any added expense, but if the roofers are up there anyway, it might be worth it to have them take down the TV antenna and put an FM antenna in its place. The reception will be MUCH better. Hope this helps.

WHAT!!!. A TV antenna will work fine with FM. Now the preamps may trap
an FM signal but the antenna is not going to block anything.

Well, the gateway has changed names just a few days ago, but the mx
records for wb7tpy.ampr.org should be valid until 1/1/95

Here's the updated information:

*** Please note updated information about the WB7TPY Gateway ***

The internet side of the gateway has a new address; instead of sending
mail to:

gate@wb7tpy.ampr.org

The new address is:

gate@stat.com

Please let your friends and gateway users know the new address asap.
The old address will go out of service on January 1, 1995.

>cprewitt@emulex.com

I personally believe in several small steps - the first step is a
simple radio, then later add the programming. My wife is not a ham
(yet), but I know several couples where the lady got her ticket due
to the exposure to the hobby by her intended. I base my comments
on my understanding of their situations, plus some personal history.

Selected couples - without names or calls:
1st: They weren't doing too well financially, so she just picked up
his old radios, they were being used as spares for the UHF club
members. They included a 6-freq 2m HT-220 and a 2-freq 440 HT-220.
On the 2m radio F1 was 146.52, F2 was 146.55 (just an alternate
simplex), F3 was F4 reverse for T-hunts, F4-F6 were local open
repeaters. On the 440 handheld F1 was 446.0, F2 was the 440 club
system channel. She used the HTs for a couple of years, and after

was comfortable with the operation of those radios, she got her own job and bought an IC-32AT duo-bander - he had an IC-U16 and a H-12 (commercial versions of the IC-04 and IC-02), as a couple of channels in each were commercial frequencies.

2nd: She chose a fancy Kenwood do-anything duo-band handheld as a first radio - he had a similar one. Instant confusion. Total disgust with complicated radios. She, to this day, has her husband program the frequencies into the memories, and limits her use to unlocking the keyboard, selecting the appropriate memory, locking the keyboard, and using the radio. She knows how to monitor on the input for jammer checking or simplex range verifying, but that's about it on the keyboard, except for the autopatch.

3rd: He works in commercial 2-way for a living. He has a Chevy Blazer (the older, big version) with several commercial radios, and all the test gear, all the time, plus 2 amateur handhelds and a business handheld. He has the Kenwood triple-bander mobile with 2m, 440 and 1200mhz in his Chevy. Her exposure to radio began in the business front office, handling the trunked 800mhz shop channel, customer radios, etc. She has technical knowledge from the service dispatcher point of view ("Joe, this customer has a bad mic cord on his mobile outside - he wants to wait, can you do it next?", or "846 from 831, your 3rd call today requests a phone call, over"). She chose a duplicate Kenwood mobile, and later an Icom duobander handheld. Why? She didn't want to have to learn another mobile front panel layout. But she still has the trunked shop channel mobile in her personal car - there's no restrictions on the autopatch calls!

The point to this? I believe that simpler, crystal controlled radios are easier to learn if the starting point is zero radio knowledge. My wife is slowly showing interest, and she will probably start out with an inexpensive Motorola Radius multi-channel handheld that I will buy, have programmed, then give her to use. After she has mastered the radio, she can select a programmable radio, I will program it, then teach her how to use it as if it was a more-channels Radius, let her get comfortable, then teach her how to program it. The Radius will probably go back into commercial use. The idea is several fun small steps rather than one big disappointment.

My father was a commercial photographer. My first camera was a german 35mm Contax at 7 years old - but I was taught how to use it first as if it was a point-and-shoot box camera. Later on I was taught how to use a light meter and use the shutter and iris and a flash. I learned at my own rate, in a way that was fun - Same idea.

My $0.03 (inflation!)
Comments and discussion welcome - flames to /dev/null.

: >while roofers are on the roof anyway, since cable gives much better
: >reception. But would the tv antenna be useful for fm radio reception?
: >If so, what kind of wiring would be best?

: I used to have a TV antenna (VHF) and used it to pull in weak FM stations
: using either the 300-ohm wire (connects direct to the back of my receiver) or
: 75-ohm cable with a 75-300 ohm converter. Worked great for me!

The entire FM radio band (and a bunch of other stuff) is between Channels
6 & 7 on the band. So, yes, anything that can pick up TV signals can pick
up radio ones.

Hello All..
I am desperately looking for a schematic for the Midland 73-005 2 meter
HT.
I have one and it works fine but I would like a drawing for it.
please respond via:
WB3DWL@GOLDEN.GANNON.EDU
or via AOL:
MattSteger

THX and 73's!

I live on the 7th story of a 26 story apt. in NYC. I am planning on getting on HF and since I am unable to mount an antenna on the side of the building nor do I have access to the roof, I need to get a small antenna that I can stick out of the window when in use and bring inside when not in use. I have considered an Isoloop (eithrr the MFJ or the AEA) but haven't found anyone who has used one for their opinion. Any other small footprint antennas for 80/40/20/15 meters suggestions would be aqppreciated. Thanks and 73 de AA2TF. (Bill)

2771. VHF Single Sideband

Newsgroup: rec.radio.amateur.misc

Bob,

Another method you could use to talk to your Dad would be to use
single sideband on 144 MHz. With a good horizonally polarized beam (11 element)
and 50 watts or better, you should have no problem.

Don

Damas,

I have a Sony walkman which can be initialized in 3 different tuner modes
(USA, Europe/Asia, or Japan) by pressing different keys when installing the
battery.

1. Remove all batteries for 30 seconds to make sure the computer resets.
(be sure to remove the small memory backup battery if there is one)
2. Press one key while installing the batteries.
3. See how the tuner operates.
4. Repeat as necessary, maybe even pressing two keys simultaneously
while installing the batteries.

I doubt there is a switch inside, but maybe you can find a way to
re-initialize the computer to tune in 9 kHz steps.

Good luck! Wayne Estes WD5FFH wayne@csg.mot.com

>

Hey wait a minute here... I think I have found something that you *may
not* be up to date on. P.C. Electronics *does not* sell modified
Mirage Amplifiers. The fact is that Mirage makes several models that
are made (modified) specifically for ATV. I believe the correct model
that you listed above would be the Mirage D1010ATVN amplifier.
As a matter of fact, you will find that Mirage has several amplifiers
with the ATV suffix in the model number that are designed for use with
ATV. There are two though, the D15, and the D26, that do not use the
ATV suffix after their model number. I did look at my Mirage brochure
today, and the D15, the D26, and all the amps that have the ATV suffix
state that they are "specifically designed for use with ATV". Hey Gary,
welcome to 1994. I believe what happened while you were out bashing all
these ATV manufacturers was that P.C. Electronics and Mirage got
together and came up with a design of a few amps that would work with
ATV.

> >I'll bet that you will find that the LSB has been re-inserted during the

>

I really sort of doubt that the wonderful VSB transmitter was causing
any Mirage amp to be over driven. I kind of believe that maybe the
wonderful AEA transmitter wasn't as wonderful as they wanted us to
believe. Hmmmm, I wonder how come AEA quit making that wonderful
little device after a short period of time?

> >Are you saying that Harris and the other TV big boys are not using any

>

Well, ok, I'll take your word for it. I'll have to take another look
see at the local LPTV channel 57 transmitter. I could have sworn that
I saw something in there besides a harmonic filter, but I am not an
expert at such things like you are.

> >Since you are going to bash PC Electronics for manufacturing and selling

> They can't be held responsible for overdriven amplifiers used after that.
>

I happen to have ordered a couple of transmitters from P.C. Electronics.
Both times, they questioned me to make sure that I knew that without
the proper filtering that I would be radiating my signal outside the
amateur band. As far as I am concerned, they did their job. P.C.
Electronics makes the transmitters, and other folks make the filters.
Thats pretty simple isn't it?

I happen to use interdigital filters made by International Crystal Mfg.
I'll bet you have heard of them, did you know that they make filters
for ATV? Yep, they cost me about $425.00 each, if I remember right.
Expensive little buggers.

While we are at it, lets slam the makers of H.F. transmitters for not
including low pass filters on their gear. Lets slam the makers of
television sets for not including high pass filters on their receivers.
Lets also slam those folks down on 80 meters using DSB AM to communicate.
Lets slam the makers telephones for not including filters to keep out
all of us hams that generate nasty signals with our improperly
manufactured equipment. While we are at it, lets slam the manufacturers
of our modern two meter radios, not only have they made it a simple snip
of a wire to transmit outside of the amateur bands, but they have made
the receiver front end so broad that they are almost totally useless
when they get near a medium strong RF environment. I think we should
also slam the makers of home computers, when I get my UHF hand held near
the darn things I hear all sorts of nasty noise. Ah what the heck...
let's just slam everybody, I'm not sure if any of them are doing things
right and following good engineering practices, are you?

> >I have a great idea. Since there are no amateur VSB ATV transmitters

>

Hey, great! Would you mind sharing your designs and schematics? We are
in the final process of linking our ATV system with the Fresno area on
2 Ghz FM. You could save us a large sum of money over what we are planning to
purchase. I am not into RF design like you are, but I love to tinker and
build stuff.

Would you also include your designs and schematics for the 70 cm
70 CM transmitter. We are going to continue out here to improperly
utilize our resources. Heck, if we could build our own from your designs
and schematics, we could quit buying that garbage from P.C. Electronics
and others. According to you, we could also quit buying those damned
expensive filters from International Crystal. I'll bet they are not
going to like this at all.

I hope all the parts that I'll need are readily available. I live in
the sticks out here, and I would need to be able to order the parts
without having to make a hundred phone calls to find out who has what
part.

Subject: Irrigation Pipe

Hi all,
I am thinking about building a veritcal and the plans require
using 2" irrigation pipe. So does anyone know where I can buy
it in the Rochester, NY area??

Thanks and 73,

TJ, kv2x

Subject: New RCA (small) satellite dish system?

Howdy,

Does anyone have knowledge or experience with the "new" RCA
satellite system. It uses a small, 18" dish and I believe
it operates above 10 Ghz. I'm seriously considering this
system as a viable alternative to CATV and standard VHF/UHF TV.

What impact does weather have on such a system. I've heeard that
signals >10Ghz experience substantial signal attenuation in
rain.

Thanx for taking time from your busy day to read and/or respond.

Correct, Alan, that is usually the best way to go. It is extremely difficult remembering that N9xxx is at location YYY. Usually the operators will go the way Net Control goes. I had the opportunity to run net traffic for relief operations during the cleanup of the plane crash in Indiana a couple of weeks ago. Naturally, tactical descriptions were chosen for the sites that had operators. We had Canteen1, Canteen 6, and Canteen 8 which were relief posts for the Salvation Army operation. Whenever there was a shift change it got most confusing and people resorted to this is Canteen 6 with info for Canteen 1. And as net control I found that having those ducks in a row I could respond by calling: Canteen 1 - N9zzz, Canteen 6 - N9yyy has info for you. This is N9WHG net control. And by my using everyone's calls, it encouraged them also to follow that protocol.

Once we got into the shift, everyone was pretty familiar with who was where so callsigns were used. Obviously, we didn't have the large number of operators at one time like the marathon did, but the combination of clear tactical calls combined with good net control operations helped make information flow and maintain legal requirements.

It also helped that Major Pat McPherson who headed the relief effort for the Salvation Army was also a ham. So we were ususally only a PTT switch from the chief.

I don't think it can be said enough that, in any kind of net operation, be it for an event like the marathon, an emergency like a plane crash, or just a ragchew net, the value of a net control operator who IS IN control is a valuable commodity. People recognize that and respect it.

Ditto. I melt some solder into the tip and about the holes on the body and
then use a torch. If you use nothing but silver connectors and be very, very
stingy with the heat, you'll have a great working connector and the coax will
not suffer at all. The connectors really need to be silver or you are just
asking for trouble.

>their arguments are good enough). So far, you seem to be one of the
>biggest apponents to a rational debate.

Please reread what you quoted above (and the rest of the message from
which it came as well). No screaming, just a series of reasons why Morse
testing is irrelevant to the service. Now, reread Gregory's posts, or
postings from his cohorts. Do you find *any* reasoned argument at all?
Greg, and most of his cohorts, offer nothing but appeals to authority,
IE the ITU requires it, which is no argument at all because that's what
we're attempting to change, and appeals to tradition which boil down to
"I had to do it, so should you". Blind obedience to tradition is not a
purpose of the service, and amounts to nothing less than hazing.

I welcome *rational* debate, but all that seems to be forthcoming from
the other side is emotion. There should be a good solid reason for

the *government* to require a particular test element. In the case of Morse testing, the only reason the FCC has given is "because the amateur community (ARRL) wants it". Now the FCC's charter comes from the Communications Act of 1934, and that charter doesn't allow the FCC to be responsive only to the whims of existing licensees. It charges the Commission with acting in the *public* interest. So the challenge to testing proponents is to show how the public interest is promoted by continued pass/fail testing of manual Morse as a gateway to other amateur operating modes and frequencies. IMHO, a reason such as, "I want the government to keep acting as a forced recruiter for my favorite mode so I'll have someone to play with" is not a sufficient reason.

Ku band signals do suffer from rain fade more than C band signals,
or VHF/UHF terrestrial signals. It doesn't even have to be raining
at your house for this to occur. All that's required is a heavy
rain squall in the beam path, which could be occurring miles to
your South.

There's another factor to consider as well. Due to agreements
with the program providers, you'll get no network signals in
areas where there is a local broadcast provider. This means
that if you want to watch your local news, or get timely
warnings of emergency situations such as tornados, hazardous
chemical spills, or the like, then you will still have to have
an off the air antenna or a cable connection.

Also, oddly enough, your local cable system will still make
money off of you if you go to the DBS system. Their contracts
with the program providers require that they get a portion of
the revenue passed to the program providers by the DBS service
since the cable franchises have exclusive distribution rights
in their territories. Hence, you watch HBO, you pay the local
cable whether you know it or not.

Still, it's a neat technology, and for rural subscribers it's
the best game in town. Picture quality is often better than
that delivered by cable even in areas served by cable. As an
addition to an off air terrestrial broadcasting antenna, it's
a winner.

Yes. Even if you are NOT going to use the autopatch, do this.
Why cross-band the repeater all the time (and beat the heck out
of your final transistor) when your HT can hear the repeater just
fine? Again, as Dave said, this assumes your HT CAN hear the repeater
reasonably well.

Actually the MMRA machines have Bay State Service, you can call
anywhere in the state. When the repeaters are linked (there
is the capability to link all 9 in the system) you have to
know the area code of the particular machine you are using also.
(ie some are in 617, some 508 so you need the 1+area code sometimes.

You do need to be a member to get the patch codes. $25/year.

From: dave@llondel.demon.co.uk (David Hough)
Subject: GB2RS News 20th November 1994

Good morning. It's Sunday the 20th of November and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

Now this week's headlines:-

There's a new two metre repeater in mid Wales,

December's RadCom will be a little late, and

Don't forget to vote in the RSGB Council election.

And we start this week with a number of items of repeater news:

The new Mid Wales repeater GB3RA became operational on Friday the 5th of November. The repeater is located north-west of Llandrindod Wells, Powys, locator IO82GG and operates on channel R5, which has its output on 145.725MHz and input on 145.125MHz. Further details and/or reports should go to the repeater keeper GW0KQX, whose address is correct in the RSGB Call Book.

The Yorkshire Coast two-metre 'In-fill' repeater, GB3YC, became operational on Monday the 7th of November. The repeater is located north-west of Scarborough in North Yorkshire and operates on channel R0, which has its output on 145.6MHz and input on 145.0MHz. Further details and/or reports should go to the repeater keeper G0OII, whose address is correct in the RSGB Call Book.

The Newhaven 70 centimetre repeater GB3LR, was returned to service on Saturday the 12th of November. The repeater operates on channel RB11, which has its output on 433.275MHz and input on 434.875MHz.

The Kilmarnock repeater, GB3AY, on channel R2, has been switched off because of a logic problem. The keeper, GM3YKE, regrets any inconvenience to users, but at the moment he is unable to say how long it will be off. For further details, contact GM3YKE whose address is correct in the RSGB Call Book.

The Elgin repeater GB3SS, on channel R0, had to be switched off on Thursday the 2nd of November, due to a technical fault. The keeper, GM7LSI regrets any inconvenience to users, but at the moment he is unable to say how long it will be off. For further details, contact the group secretary GM4WKO whose address is correct in the RSGB Call Book.

The December edition of Radio Communication has been subjected to unavoidable production delays and is likely to be delivered to members during the first week in December. We apologise for this delay which is not expected to affect subsequent editions.

RSGB members are reminded that the ballot papers for Council nominations must be received at RSGB Headquarters by 12 noon on Tuesday the 29th of November. The ballot paper and proxy voting form are part of the Society's Annual Report and Accounts which was posted to all members on the 17th of October. Any member who has not received this document should contact Fay Huxley at RSGB Headquarters urgently.

The Annual Meeting of the Radio Society of Great Britain will take place at the Royal Society of Chemistry, London on Saturday the 3rd of December at 2pm. Full details are in the RSGB Annual Report, sent out with November's RadCom.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

From East Kiribati, WC5P and KH6DFW will sign respective T32BE and T32BI from Christmas Island from today, Sunday the 20th until Sunday the 27th taking in the CQ World Wide CW contest.

From Syria, a large US American group, including K3NA, N6TV, W6OAT and W0YK will sign YK0A from Wednesday the 23rd until Wednesday the 30th on all bands and modes, with special attention to CW, RTTY and LF bands.

And from the Isle of Man, G4UOL will be active as GD4UOL from now until Wednesday the 30th of November and as GT3FLH during Thursday and Friday the 1st and 2nd of December. Activity will be on all bands, CW only. Check 10kHz up from band edges, plus 10.102MHz and 18.070MHz.

Next the Rally News and we know of one for today, Sunday the 20th of November: The Bishop Auckland Amateur Radio Club Radio Rally is being held at the Newton Aycliffe Leisure Centre, Beveridge Arcade, Newton Aycliffe, County Durham. From the A1M take the A167 to Aycliffe town and follow the rally signs. Doors open at 11am, or from 10.30 for disabled visitors. The event features trade stands covering radio, electronic and computer interests, an RSGB Book and Information stand and a bring and buy stall. The centre has numerous attractions for the whole family. Refreshments are available and talk-in is on 2 metres, channel S22.

Now news of the two rallies we know of for next Sunday the 27th:

The Bridgend Radio Rally is to be held at the Bridgend Recreation Centre, Bridgend. From the M4, take junction 35 or 36. Doors open at 11am, or from 10.30 for disabled visitors. The event features a bring and buy stall, and an RSGB Book stand. RSGB Morse Tests will be available on demand but remember to bring two passport size photographs and the necessary fee. Refreshments will be available and talk-in will be on 2 metres, channel S22 and via GB3MG on RB7. Details from Mike, GW7NIS on 01656 722199.

The West Manchester Radio Clubs Winter Rally is to be held at the Bolton Sports and Exhibition Centre, Silverwell Street, near Bolton town centre. Doors open at 11.00am or 10.30 for disabled visitors. The event features the usual trade and club stands and a bring and buy stall, all at pavement level. Details from G1IOO on 01204 24204 evenings only.

Now news of a Rally cancellation:

The Leeds and District Amateur Radio Society Christmas Rally, scheduled for the 4th of December has had to be cancelled. Details from G0IBU whose address is correct in the RSGB Call Book.

HF contest news next:

The HF Contests Committee reports much activity during the RSGB Club Calls Contest, which took place on the 12th of November. It appears that many more clubs are using this event as a first step to general contest activity and several clubs and their members made a first time appearance. A number of new Novice and Class 'B' licensees seemed to be enjoying themselves operating club stations. The committee hopes to hear many of these newcomers in the RSGB Affiliated Societies' Contest in January.

Next weekend, the CQ World-wide DX CW Contest takes place from 0001 on Saturday, to 2359 on Sunday the 27th. All bands 160 to 10m will be used, but not the WARC bands. See October RadCom p18 for brief details.

Next some VHF contest news:

The RSGB VHF Contests Committee has declared the winners of the 432MHz Fixed Station Contest which was held on the 21st of August. The contest attracted an increased number of entries and conditions were generally considered to be average to good. Many stations had contacts in excess of 350 kilometres. Stations in nine countries, twenty-five Locator squares and forty-four UK counties appeared in the entry logs. The Single Operator section winner was Erik Gedvilas, G8XVJ, with 32,500 points from 75 contacts. Runner up was D Gordon, GW6ZUQ, with 27,693 points from 64 contacts. Winner of the 'Others Fixed' section was M J Willis, G3IGQ, with 9,400 points from 46 contacts and the Wythall Radio Club, G1WAC, was runner-up with 4,653 points from 33 contacts. Certificates were also awarded to Frank Laanen, PE1EWR, the leading overseas station and Roger Piper, G3MEH, who was the leading station using 25 watts or less to a single antenna. The full results will be published in RadCom as soon as possible.

The first RSGB Winter Microwave Cumulative Contest takes place next Sunday the 27th of November from 0900 to 2100 UTC on all bands from 2.3GHz and up. See November Radcom page 78 for further details.

The penultimate RSGB 432MHz Cumulative Contest takes place on Monday the 28th of November from 2030 to 2300 UTC. For further details see July RadCom page 82.

Special event stations active this week include several who are operating as part of the BBC's Children in Need appeal during next Friday and Saturday, the 25th and 26th of November. We have details of two of these:

GB2CIN, will be aired from Jarvis Brook Social Club by members of the Crowborough and District Amateur Radio Society. Operation will be on HF and VHF. Contact Mick, G6UUO on 01892 661807 for further information.

GB0KIN, Kids in Need, will be operated by members of the Mid Sussex Amateur Radio Society from the Burgess Hill Shopping Place. Activity will be on 2 metres and 70 centimetres and pledges will be for the number of contacts. Details from Phil, G3LCF on 01444 8831400.

And now the solar factual data:

The period from the 7th to the 13th of November saw solar activity at very low levels, with a decline in both sunspot and solar flux levels. No flares of any note were reported. The geomagnetic activity ranged between quiet and unsettled levels, mainly affecting the more northern latitudes.

The sunspot indices increased slightly, reaching 69 on the 12th before declining to end the period at only 11. The spot indices meaned at 40. Solar flux levels hardly varied from day to day, and averaged 80 units for the period. Though the electron fluence levels overall have declined slightly, they are still at a relatively high level. The 90 day solar flux averaged 82 units on the 13th.

Due to a disappearing filament on the 7th, the geomagnetic field became unsettled giving an Ap index of 14 units by the 9th. From then on, levels declined to mostly quiet, being down to only 5 units by the 13th. The period averaged an Ap index of 9 units. The state has been 'nil, nothing to report' throughout the period. The x-ray flux declined slightly from A5.4 down to A3.0 units, with the period averaging A3.5 units.

The aa indices, as reported by the British Geological Survey for the period from the 10th to the 16th of November, were mainly unsettled, however the 6th, became very disturbed with a late morning period being up to 102 nanoTeslas, giving an index of 54.2 nanoTeslas - about K4 - for that day. The period averaged 31.8 nanoTeslas, about K3. The October monthly geomagnetic Ap index was 19 units, with the smoothed level for April 1994 being 17.6 units. There has been a steady increase in the smoothed magnetic levels since April 1993 which was 14.9 units.

I'll repeat the figures. Spots - 40; Flux - 80; Ap index - 9; x-ray flux - A3.5. October magnetic Ap 19.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers, as reported by Meudon, declined over the period from 8.2MHz down to 6.8MHz by the 13th, giving an average of 7.3MHz. The darkness hour lows averaged 2.6MHz and were

reasonably steady. Spread F was reported on the 8th lasting up to 9 hours. The highs are now occurring around mid-day, with the lows mainly around 05.00 to 06.00 hours.

I'll repeat the figures. Highs - 7.3MHz, Lows - 2.6MHz.

And lastly the solar forecast:

This week, the more active side of the sun should be rotating into view, solar flux levels are expected to increase into the 90s. There is also a chance of the odd C class flare. Geomagnetic activity is expected to be up to very unsettled levels today, then declining to more quiet levels until the 25th, when a recurrent coronal hole is expected to lift levels to very unsettled or possibly sub storm at higher latitudes. Ionospheric MUFs during daylight in the south, are expected to reach 25MHz, and in the north about 21MHz, but much will depend on the level of geomagnetic activity. The best daylight paths are generally north/south, with the lower HF bands giving east/west paths during the darkness hours.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G 0 Victor Lima and G 7 Tango Victor series, and Novice calls in the 2 0 Alpha Juliet and 2 1 Delta November series.

--

GB2RS is prepared by the Radio Society of Great Britain
and is broadcast in the 80m, 40m, 6m and 2m bands.

Subject: How Do I Convert Local Time To UTC Time?

In article <3ah196$j89@newsbf01.news.aol.com> tomsunman@aol.com (TOM SUNMAN) w
rites:
> It's easy. First convert regular time to MILITARY time. 1 pm would
>be 1300 hours, 2 pm is 1400 ETC. Now, ADD 5 hours to that and BINGO! UTC!

Not quite! (Actually it's simplers...) Because the original poster is in Arizona, he (or she) must add either seven or eight hours (I forget which--Mountain time is seven and Pacific is eight...). It is only five hours for those of you living in the eastern US.

Because Arizona never goes to Daylight Savings Time, they never change the amount they add to get to UTC. They, and the part of Indiana in the Eastern time zone, are the only parts of the US that are this way (I believe)...

>Hope I helped!

Sorry...

People from other countries do it occassionally on vacation or business,
and come out with extras in one session. Clearly anyone who can go
from zero to a higher level in one go, isn't starting at zero really.
However you can pat yourself on the back for the pleasure of getting general
or advanced in one hit. even if you didn't start from "zero".

>Maybe there need to be higher classes of licenses.

| In 1994, to get a license one has to find where the examining session is,
| make some marks on a paper and hope the marks landed on the right spots.

You must have trivially-easy multi-choice questions over there. Here,
you are faced with four answers, one of which is typically obviously
wrong, and the other three all look correct. Pick one at random, and
you'll fail - our pass requirement is 75%.

The consensus here is that the multi-choice exam is much more difficult
than the earlier essay-type, whuch you could easily waffle/bullshit your
way through.

Subject: Re: repeaters and intermodulation

I *Totally* agree with you. The 5100/5200 has to be the worst
rig Yeasu has ever produced. I'm very dissaponted with it.
I've noticed other problems with it. The main problem would
probibly be the poor intermod rejection. The second (and this
really sticks in my craw) no audio amplification. I had to add
an external amplified speaker just to use it on a day to day
basis. The intermod is so bad on 2 meters I usually turn the
rig off and monitor with my Rs Htx 202 (of which I am very much
more happy with). I think it's crazy that after spending $600+
us dollars on a rig, I'm still not happy.

I *KNOW* I'm writing a letter to Yeasu, and I *KNOW* I'll never
buy another Yeasu product again. I knew I should have stuck
with Kenwood.

Subject: Re: Morse exclamation point?

I found an explanation about what happened to the Morse exclamation point in a
73 magazine article. The May 1966 issue, in "Origin of the Wireless Code" by
F.D.Whitmore, W2AAA,in the discussion of International Morse, states:

The period consisted of six dots sent in three groups of two (.. .. ..). This
stood until September 1, 1939. At the Cairo International Radio Convention in
1938, the delegates agreed to change the period to the symbol used for the com
ma
(.-.-.-). This satisfied telegraph companies whose printers produced it (ie. t
he
old period) as three "i"s. The symbol for the exclamation mark became the comm
a
(--..--). Telegraph operators never used the exclamation mark except to abuse
each other within the law. A half dozen !!!!!! expressed ironical admiration o
f
another operator's stupidity.

-. -.. --- ..-. --.- ..- --- - .

So the teleprinters that couldn't handle a spaced character were the impetus a
nd

the exclamation point was dropped due to lack of use.

: What impact does weather have on such a system. I've heeard that
: signals >10Ghz experience substantial signal attenuation in
: rain.

True. Hughes *claims* that their link budget is such that they will
achieve 99.7% availability even in the wetter parts of the country.
Their satelite footprints are supposedly skewed so that the wetter
parts of the nation are illuminated more.

You can drive anywhere in the area with the same result. OTOH, there
is another AM station in town (5 kW) that's incredibly dirty. If you
drive anywhere within half a mile of it the entire AM band is blanketed
with interference. Even at my house 28 miles away, its third harmonic
is S9+20db. Due to political (correctness) considerations, the FCC's hands
have been tied in doing anything about it.

Funny I have a FT5200 (USA sourced model) and have little trouble from
breakthrough and intermodulation even though I live in an area bristling
with commercial antennae (Highgate N6)

Have you checked YOUR antenna lead - a possible cause is a non-linear
corroded connection. My only wish for the FT5200 is that they don't
make a wired mike which remote controls like the wireless one.

Gentlemen,
Let me clear something up. I am secretary of the KCdx club who operates the W
0

QSl buro. As of this dat WE HAVE SUSPENDED OPERATIONS. Now if the ARRL doesn't want to accept that, thats fine. I will not go into all the details because of possible litigation but, let me suffice it to say that a few of the sorters were accused of theft and we WILL NOT operate under these conditions. I sorted the letter "B" for about 1 year and one of the guys I sorted was one of the accusers, and was very beligerent with the present sorters WIFE on the phone not too long ago. This as many of you know, is a volunteer position and under no circumstances will we continue operations with the present allegations and the attitude that the Midwest director has regarding this issue. Also if anyon
e
has contact with him, pse have him give me a call as I would like to relate some of the items to him if he is interested. PLEASE DO NOT use reflector bandwith to reply as this is a 0 district matter not a reflector matter. If anyone wishes to contact me in regard to this matter, I have posted my e-mail address at the closing of this letter. Gentlemen, this has been fun and we sincerly wish to continue, but not under these circumstances.

>If so, what kind of wiring would be best?

Your best reception will come from hooking your cable into your FM
receiver, *if* your cable system passes through the FM band. Many do, but
some have taken over the FM band to be able to provide more channels.
If that is the case, the tv antenna should provide good reception.

My $.02...

UTC-7 is correct for MST. As far as conversion is concerned,
I have resolved this problem by setting my computer clock to UTC and
letting the other guy figure it out :-)

Suggestions: There is a program or two out there that lets you call
NIST and sync your computer to UTC with appropriate adjustments.

Also, MFJ (et al.) make cheap dual-zone digital clocks. Set one
for UTC and one for local time. Even an el cheapo clock for the shack
set to UTC solves the problem.

It's alot like metric v. English measurement...don't convert,
just live on UTC. :-)

>> using tactical calls
>
>It certainly makes things easier, but unfortunately it is also illegal.

As pointed out elsewhere in the thread, it is legal to use "tacs" as long as each station also identifies at the prescribed intervals.

Having done the NYC Marathon for 7 years (most of them as Internal Start NCS), as well as several MS bike tours, walk-a-thons, etc. per year I can tell you that MOST of these operations use tacs because when things get jumping NCS doesn't have time to figure out who's where.

FWIW, I instruct ops in "my" nets that they are responsible for id'ing their station, and expect them to do so at the end of each exchange, e.g., "Lunch from net...2 way blah-blah...N2AYJ, Net Control." The guy at "Lunch" concludes, N2xxx, Lunch". The information is passed, the location is known, and everybody is legal. I also periodically advise "all stations this net, time is...N2AYJ, Net Control, Podunk Holler Bike Tour." This satisfies the need to make casual listeners aware that the frequency or repeater is in net operation.

And, just so you know, an FCC guy *does* monitor the Marathon communications, and the entire operation is taped and reviewed; problems such as this *are* brought up at planning meetings and training sessions.

Thanks for your concern. 73

From: donahue@access.mbnet.mb.ca
Message-ID: <3aobfm$kdj@canopus.cc.umanitoba.ca>
Source record: 256537

Does anyone out there in packet radio land know which format the TPK 1.82 docs are in? They are not in pure ASCII form...and have all sorts of non-ASCII characters in it. They COULD be fixed up using a 'search & replace' text processor, but it would take a tremendous amount of work.

So...is there aplain vanilla ASCII text version of the 1.82 docs available from a FTP site somewhere??

Thanks in advance...

Doug

|>in normal wide SSB. I don't know about good quality equalilzers
|>but cheap ones don't divide up that range, do they?

Well I picked up a cheap one and it has the following ranges:

30 Hz, 60 Hz, 120 Hz, 240 Hz, 480 Hz, 1 kHz, 2 kHz, 4 kHz, 8 kHz, 16 kHz

As do many multi-octave equalizers. I'm not sure they all go down to 30 Hz, but 7-10 octave equalizers aren't that uncommon, and they can be pretty cheap. I've used a stereo one in combination with a W9GR DSP filter for some pretty good results. I "equalize" the signal going to the DSP with one channel, and then "equalize" the output of the DSP on the other channel. Works pretty well, especially for 8 bit DSP's that don't have quite the dynamic range of 16 bit ones, plus they tend to have more quantization noise, which the equalizer can help attenuate.

For $5, how can you go wrong? One thing I might suggest is that if you get a stereo one, cascade the two sides to give you greater range. This way if the equalizer has a +- 10 dB range, cascading the two channels will give you +- 20 dB.

Subject: Linear Amps

Brad Herring (herring@nps.navy.mil) wrote:
: Hello All,
: I have a question concerning linear amps. I know that there are
: two different classes of amps. Class "C" and Class "AB-1". Can anbody
: explain the difference between the two and whcih would be a better
: amp for the money. This amp will also be used in a mobile. Help
: the confused!!!!!!

: Thanks in Advance!!!
: Brad

The class AB-1 tube/transistor conducts for less than 360 but more than 180
degrees and in the case of a tube amp does not draw grid current. In a
class C amp the tube conducts for less than 180 degress, more likely around
90 to 120 degrees and the tube does draw grid current. The efficiency of the
class C amp is higher that a class AB-1, generally 75% or so as compared to 50
% or so for a class AB-1. The down side is the class C amp requires high level
modulation for voice. It is fine for CW. The class AB-1, being a more linear
amplifier can amplify a voice signal that was generated via a means of
low level modulation.

Excutive Summary:

If you want to operate SSB, only class AB-1 will work.

You can drive anywhere in the area with the same result. OTOH, there
is another AM station in town (5 kW) that's incredibly dirty. If you
drive anywhere within half a mile of it the entire AM band is blanketed
with interference. Even at my house 28 miles away, its third harmonic
is S9+20db. Due to political (correctness) considerations, the FCC's hands
have been tied in doing anything about it.

Funny I have a FT5200 (USA sourced model) and have little trouble from
breakthrough and intermodulation even though I live in an area bristling
with commercial antennae (Highgate N6)

Have you checked YOUR antenna lead - a possible cause is a non-linear
corroded connection. My only wish for the FT5200 is that they don't
make a wired mike which remote controls like the wireless one.

Gentlemen,
Let me clear something up. I am secretary of the KCdx club who operates the W
0
QSl buro. As of this dat WE HAVE SUSPENDED OPERATIONS. Now if the ARRL doesn't
want to accept that, thats fine. I will not go into all the details because of
possible litigation but, let me suffice it to say that a few of the sorters
were accused of theft and we WILL NOT operate under these conditions. I sorted
the letter "B" for about 1 year and one of the guys I sorted was one of the
accusers, and was very beligerent with the present sorters WIFE on the phone
not too long ago. This as many of you know, is a volunteer position and under

no circumstances will we continue operations with the present allegations and
the attitude that the Midwest director has regarding this issue. Also if anyon
e
has contact with him, pse have him give me a call as I would like to relate
some of the items to him if he is interested. PLEASE DO NOT use reflector
bandwith to reply as this is a 0 district matter not a reflector matter. If
anyone wishes to contact me in regard to this matter, I have posted my e-mail
address at the closing of this letter. Gentlemen, this has been fun and we
sincerly wish to continue, but not under these circumstances.

|> assign tactical callsigns!

Yes, you must identify with your FCC-assigned call sign every ten
minutes, but as has been pointed out many times already, you can *also*
use tactical call signs. For instance, you can use tactical call signs
for the ease getting ahold of who you are looking for, but everyone must
use their real call sign every ten minutes. So, you could call someone
by their tactical call sign, and give yours so they know where you are,
but then at the end of the exchange (or within ten minutes, but at then
end is probably easier--as long as the exchange isn't ten minutes
long...) you would give your FCC-assigned call sign.

This is certainly legal.

It certainly makes things easier, but unfortunately it is also illegal.
Part 97.119a says that "Each amateur station...must transmit _its assigned
call sign_ on its transmitting channel at the end of each communication,
and at least every 10 minutes during a communication..." The FCC doesn't
assign tactical callsigns!

I've been net control during operations such as the ones described, and
solved this problem by keeping a list of locations and hams assigned to
each one next to the operating position. When possible, such assignments
were made in advance and participating operators would also carry a list
of who was where. A little more cumbersome, perhaps, but keeps within the
rules which the "tactical callsign" arrangement clearly does not.

From: gerdeman@alrc.usbm.gov
Subject: TI 99-4 keyboard

Several years ago my son and I built the CW 6805 morse code keyer
from an article in QST. Now some of the keys (esp Function, 1 &
2)work intermittently. I have tried taking the keyboard apart but
that didn't help. Does anyone know where I can buy another
keyboard or have any ideas about how to fix the one I have. We
have an old commodore c-64 can I press that into service. Any
help will be appreciated.

Thanks
Steve Gerdemann WB7OEE

> If so, is it possible to use one of the popular 2m mics on my 10m rig?

I am not familiar with the Ranger line, but the Uniden & Radio Shack 10M
mobiles have the same pinout on the mike plug as Kenwood uses...I have an
MC48B (I think that's right..memory is a little sluggish before coffee) on
my RS HTX-100 since the OEM mike SUCKS and the tones work OK. Of course,
they don't do anything, but that is beside the point.

Check out your mike pinout diagram...you may already have power there.

Hope this helps.

I used to have a TV antenna (VHF) and used it to pull in weak FM stations
using either the 300-ohm wire (connects direct to the back of my receiver) or
75-ohm cable with a 75-300 ohm converter. Worked great for me!

Yes, you can use your tv antenna for FM radio. In fact, the sound portion
of your tv is brodacast on the upper FM frequencies (you may have seen that
you can actually buy a radio that receives tv stations as well as am/fm).
The standard flat lead 300 ohm cable is fine. Anything more expensive is
probably not worth the cost unless you have a major power line interference
problem.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 20/2330Z NOVEMBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 20 NOVEMBER AND FORECAST FOR 21 NOVEMBER - 23 NOVEMBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 79/19

GOES satellite data for 19 Nov
Daily Proton Fluence >1 MeV: 5.7E+5
Daily Proton Fluence >10 MeV: 1.1E+04
Daily Electron Fluence >2 MeV: 1.8E+06 (normal)
X-ray background: A3.3
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
21 Nov 22 Nov 23 Nov
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 21 Nov: 81/22

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: active to minor storm levels 06-15UT
and otherwise quiet to unsettled.

Estimated Indices : A K Observed A Index 19 Nov
Learmonth 20 2344 5323
Fredericksburg 24 17
Planetary 24 15

Observed Kp for 19 Nov: 3433 2333
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
21 Nov 15 Mostly quiet to unsettled, with brief active periods
possible.
22 Nov 10 Unsettled
23 Nov 8 Quiet to unsettled
COMMENT: active to minor storm levels noted on 20 Nov were due to a
coronal hole.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
20 Nov fair-normal fair-normal poor-fair
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
21 Nov fair-normal fair-normal poor-fair
22 Nov fair-normal fair-normal fair
23 Nov normal normal normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
20 Nov 5 mostly near predicted monthly values, with
depressions of 15-30% from 17-18UT and occasional
blanketing by sporadic E layer at Sydney.
Night-time enhancements of 60% were noted at Townsville.

Predicted Monthly T-index for November: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
21 Nov 20 Near predicted monthly values
22 Nov 30 Mostly near predicted monthly values, with occasional
enhancements of 15-30%.
23 Nov 30 Mostly near predicted monthly values, with occasional
enhancements of 15-30%.
COMMENT: Sporadic E layer was regularly observed yesterday at low and
mid lats and is expected again at times today. Propagation conditions
appeared fair to good at low and mid lats and are expected to remain
so today.

The following is a QST

The Mexican government rescues a DXpedition stranded after their boat engine fails at sea, ham radio runs the New York City Marathon and the founder of the Westlink Radio Network says it was definitely a good idea. These stories and more on Newsline report number 901 coming your way right now.

(*****
DXpedition Rescue

It sounds like every DXchaser's dream. Seven hams set out on a DXpedition to a Mexican island 300 miles south of the southern tip of Baja. This, to coincide with the CQ Worldwide SSB Contest. But the voyage takes a frightening twist when the group becomes stranded in the Pacific. It's an incredible story of calm and anxiety. Of alleged negligence and clear thinking, and of compassion. Ed Kritsky, NT2X of New York City, and his fellow DX voyagers spent a week on Revilla Gigedos island in late October.

"It was not a pleasant experience. We got taken by the boat owner who, well if it were a car it would be called a lemon." Ed Kritsky, NT2X.

Kritsky sez the team was promised a nice furnished boat in good working condition. That's not what he sez was delivered.

"The boat had numerous violations was not supposed to be out in the ocean. There was less crew than was supposed to be. Instead of seven, there was five. It was ill prepared. It lacked any meaningful conveniences for an open sea sail. It didn't have safety equipment." NT2X.

With the DXpedition over, Kritsky and crew head back to LaPaz, Mexico. It's around midnight, in the Pacific, when the boat suffers a total engine failure.

"I was sleeping on the upper deck and was woken by the sound of a flare being launched. Now I didn't know what was going on except I heard this load bang bang. There was the red flare going down." NT2X.

Kritsky sez the captain was not qualified to hold the job. He sez crew members didn't even know how to use their radios. So Kritsky grabs the mike of an Icom 725 and contacts a ham in Mesa, Arizona. The Arizona ham calls the U.S. Coast Guard in San Diego to report the boat's situation. The hams later contact the Mexican Navy which picks them up and brings them to a military base on Socorro island. The problem then becomes getting back to LaPaz. Kritsky sez the boat's owner refused to pay to send a pickup boat. The hams couldn't find a plane large enough to haul them and their equipment. Besides, the island's airspace is restricted. In the meantime, DX crew members were on the air getting offers of help from generous fellow hams.

"There were about 50 Mexican hams on the air for two days trying to locate the aircraft. Offering to take collections to get us the tickets, to get to pay for the aircraft." NT2X

Kritsky and the others finally wind up aboard a Mexican navy plane for the 2 hour flight to LaPaz. There, the hams are greeted by a crowd of cheering Mexican amateur radio operators. Kritsky credits his fellow hams for keeping cool during the ordeal.

"If it wasn't for amateurs aboard that boat I think we could have had serious problems. With mother nature and the big blue ocean out there I think this was probably really taking it to the extreme." NT2X.

With corporate support, the DX group members paid nearly $15,000 for their experience. They're glad to have made it out alive. Ed Kritsky offers this advice if you're planning a DXpedition: Check out who you're dealing with and their equipment very carefully.

(*****
NYC MARATHON

About 500 hams helped guide 25,000 runners through the streets of New York on Sunday, November 6th. This for the running of the 1994 New York City Marathon. Since the inception of this mega event, ham radio has played a key role. Educator Carole Perry, WB2MGP has been a marathon communicator for a number of years. She says that for everyone involved, ham radio provides peace of mind.

"The magnitude of the thousands and thousands of other people who are involved in this, the runners and the other volunteers, the medical people, the food deliveries, the volunteers who run along side, the runners to give them their water. There's so much that goes into this and to feel like your one small part of it, that's very exciting by itself. But certainly the amateur radio part of it is extraordinary. It's peace of mind for the families, knowing were the runners are at all times. That communications, I think, is way under played. I don't think the hams get nearly enough credit for what they do." Carole Perry, WB2MGP.

Perry says that it is the dedication of one particular ham that makes it all happen.

"Certainly Steve Mendelsohn who can't say it about himself so I will say it for him, who heads this up from the Hudson Division, is an extraordinary organizer. He is right on top of things. I think the day after the marathon he starts planning for the next year. He's, from the top on down totally involved with different nets and getting people to volunteer and so on. And once you are in it, the enthusiasm of everybody whose involved in it kind of feeds on itself. I think a lot of the hams responsible for bringing other kinds of volunteers in as well which is an

interesting spinoff and ripple effect." WB2MGP.

The Steve Mendelsohn that Carole is referring to is of coarse ARRL Hudson Division Director Steve Mendelsohn, WA2DHF.
And suffice to say that the New York City Marathon is well established as one of the most important events for those who like competition running. Thanks to Steve Mendelsohn, WA2DHF and five hundred other hams, its also an amateur radio communications exercise second to none.

(*****
COMMENT DATE SET ON 2400 MHZ ISSUE

Turning to regulatory matters. The FCC has set December 19th, about one month from now, as the comment due date for a Notice of Proposed Rule Making to convert a block of spectrum from federal government to commercial use. This, includes two UHF bands shared by Amateur Radio on a secondary basis with the government.
As reported two weeks ago, the proposal would allocate 2390 to 2400, 2402 to 2417, both shared by amateurs, and 4660 to 4685 MHz to the Fixed and Mobile Services. The FCC says that it is required by the Omnibus Budget Reconciliation Act of 1993 to adopt rules for such a reallocation by February 10, 1995.
The Commission now notes that it has already received a number of responses to its Notice of Inquiry on the proposed reallocations. This includes formal comments from the amateur community including one from the American Radio Relay League.
The agency says it has also set a reply comment cutoff date on this NPRM. That date is January 3, 1995.

(*****
ARRL COMMENTS ON DIGITAL PLAN

The ARRL has filed reply comments on FCC PR Docket 94-59, that proposes to allow automatic control of digital stations on the HF bands under certain specific conditions.
The League said that it shared concerns filed by some hams about the possibility of interference to amateurs using other modes, and urged the FCC to adopt its original proposal for specific subbands and other restrictions.
The ARRL made essentially the same recommendation in its comments on the FCC proposal in early October. By that time, the FCC had received comments from 15 parties, eight opposed to automatic HF control, five supporting the League's proposal for specific subbands, and two supporting the ARRL plan but with additional provisions for avoiding interference.
The League said in its reply comments on November 1st that since some parties suggest no restrictions, while others advocate no changes at all at, that it, the ARRL, favored a middle course. The same one it originally had proposed and was the basis of the Commission's own Notice of Proposed Rule Making on the matter.

(*****
ZAPPER-ZAPPED

The Zapper, a radio transmitter that can be altered to set off automobile radar detectors, has itself been zapped by the FCC. According to the Reuter News Service, Electronic Rainbow Inc. of Indianapolis, which advertised its transmitter as a way to stop speeders, said it has heeded a Federal Communications Commission order to stop selling the $50 unit.
The company claims that device was originally intended for amateur radio operators communicate. But a check by Newsline of recent issues of QST, CQ, 73 and Amateur Radio Trader Magazines show no advertiser listing for either Electronic Rainbow or any microwave communications device by them for hams. And the Reuter story says that with only a few minor adjustments, the unit changes frequency to 10.525 gigahertz, which triggers alarms on radar detectors.
The FCC stopped short of saying that the Zapper is not really a piece of ham gear. It does note that the unit has not received federal approval and would likely be required to have safeguards to prevent its alternative use as a signal to radar detectors if its ever again placed for sale. This is because radar detectors are illegal in several states, and a federal law prohibits truckers from using them. Had it refused to comply with the FCC order to quit selling the Zapper, the company faced a fine of $10,000 per day.

(*****
PIRATE PROSECUTION

Cable TV service pirates were put on notice November 7th when the Federal Communications Commission warned the public that it's illegal to tamper with converter and decoder boxes without permission of the cable operator.
The National Cable Television Association hailed the FCC's public notice. Jim Allen, head of NCTA's Office of Cable Signal Theft, said the announcement killed the arguments of third-party equipment brokers that engage in the sale of modified converter and decoders.
NCTA estimates the industry loses billions of dollars each year in cable programming theft. Under existing law, the illegal use of a converter and decoder is punishable by up to $1,000 in fines and imprisonment of up to six months. Importers or makers of illegal equipment can face fines of up to $50,000 and two years in prison.
FCC staffer John Reed said there was nothing new at all in the agency's announcement. However, he said the FCC issued the public notice at the request of NCTA, which has apparently seen a surge in cable piracy.
"There is no more argument," says Allen. "They are breaking the law."

(*****
IRISH DIGIPEATER

From Ireland, N2DFP reports the Donegal Digipeater is up and running on 144.675 with a link for the EI5TCR Cluster. All reports have been excellent. The Node callsign is EI5TCR/2 with an alias of BARN 22.

(*****
DX

In DX listen for Haiti back on the air. Missionaries HH1D and HH1T are Darlene Young, KB8CTC, and husband Tim, KB8CTD. The husband and wife duo reportedly operate between 14.260 and 14.350 MHz around 22:00 UTC and 7.288 MHz at 10:00 hours UTC. They are believed to be running a TS-450S from a solar charged battery system. QSL as they direct.

(*****
NEWSLINE GROWS

And finally, last week Newsline began a month long celebration to commemorate its 900th consecutive newscast. And, as those who were with us last week heard, Newsline actually began life in 1977 as the Westlink Radio Network. This when founder Jim Hendershot WA6VQP produced a bulletin for local Los Angeles airing that dealt with repeater deregulation. Ironically, the first year of the Westlink Radio news did not air on a repeater. According to Hendershot, it all began on 223.5 Mhz simplex.

"Well that is true. It started out because we felt the best way to distribute it was on simplex. We started it out on 223.5 Mhz. In reality the major distribution, at least the first year or so was on 223.5 Mhz and a growing number of cassettes." Jim Hendershot, WA6VQP.

While 223.5 MHz worked well for hams in Los Angeles, as word of the newscast spread nationwide Jim had to find a relatively inexpensive way to distribute it to the rest of the country. His first thought was to mail out tape cassettes. Little did WA6VQP know what this decision would lead to.

"It got to the point with me where I was doing something like a hundred cassettes a week, or some crazy thing like that. And it was just overwhelming, that's when things had to change." WA6VQP.

And change they did. About a year after he started the Westlink News, Jim's life took a new direction.

"I was already engaged to be married at that point. After I got married responsibility to the family was just too much. I married a very nice lady with, what shall I say an already made family. So I had four kids when I got married, to start with. It was a real challenge. So WestLink just had to move off to

somebody that had more time, less responsibilities." WA6VQP.

It was the team of Bill Pasternak, WA6ITF, Bill Orenstein, then KH6IAF -- later KH6QX, and Alan Kaul, W6RCL that became the lynch pins of the Westlink news organization. In the late '70's and early '80s that trio worked at refining the newscast. Hendershot says that it all was a good idea.

"You know it is always gratifying to know that there is still so much interest. And when I see how big it's become it was a good thing to start. I'm glad that it has done so well and it has received so much acceptance." WA6VQP.

Well accepted today, that's true. But back seventeen years ago this was not the case. I fact, it took the words of a prominent FCC official and a few from a radio con-man to get the Westlink News established with the mainstream ham radio community. That part of the story, next week.

I am in need of a set of structural plans for a U.S. Tower (MA-40)
This is the 40 foot tubular crank up. I will pay copying cost and
mailing plus whatever for your time..
I check this conference daily or you can E-Mail to the address below.

dale.piedfort@pcappbbs.com

I am also interested in purchasing the Base and Raising fixture for
one, if there is one for sale within 350 miles from Anaheim, Calif.
I will pick any where from here to Sacramento.

>Does anyone out there in packet radio land know which format the TPK 1.82
docs are in?

There should be two copies of the TPK docs in the zipfile being
distributed via most methods. One set, called TPK.DOC is in ASCII format.
The other set, TPKDOC.IBM, is formatted with "IBM Printer Codes"
according to the INSTALL.BAT file.

If you issue the command "PRINT TPKDOC.IBM" from a DOS prompt, it will
print with pretty accurate pagination and paragraphs.

If you don't have TPK.DOC on your distribution disk (or zipfile), let me
know and I can make a copy for you and attempt to send it to you via
EMail.

Have fun.

>which it came as well). No screaming, just a series of reasons why Morse
>*testing* is irrelevant to the service. Now, reread Gregory's posts, or
>postings from his cohorts. Do you find *any* reasoned argument at all?

Actually, yes. I don't agree with it, but I do recognize a reasoned argument. The reason I don't agree is because I don't agree with his starting point. So far, everything either side has said has started from diametrically opposed "facts." If you intend to convince someone to agree with your post, you must first start with something they agree with. So far, as far as I can tell, you have not even *attempted* to do this. (I think Greg has tried, but I don't think he's has succeeded. However, he has tried...)

I agree testing isn't relevant, but there are those who don't. If I was one of them, I would not be convinced by any of your "reasons."

>I welcome *rational* debate, but all that seems to be forthcoming from
>the other side is emotion.

Emotion is most of what is coming from both sides. If you truly welcome rational debate, it would be refreshing change if you exhibited some...

Actually, some VECs, at least, do have a "test." (The ARRL/VEC does.)
However, it is not the same for all VECs. Making another test would
(almost) comprise making another license class. This is much more work
than it is worth.

Hello John...
The ZIP file that we downloaded off of the local BBS does not contain the
plain ASCII docs. If you could point me toward an FTP site, I could snag
a copy of the program easier than you could send me the required docs.

Thank you very much for your input. I appreciate it very much.

SUBJECT: OPS - Information Unused??
RB 350 RELEASE DATE: Oct 31, 1994

These weekly BULLETINS appear in most full service packet radio BBS in the U.S. They are technically addressed to RACES @ ALLUS in order to be automatically filed in the bulletin board files sections. As to the topics these contain, they apply equal well to most government emergency communications units whatever their name.

Also during an emergency the OES SITREPS (Situation Reports) and situation summaries addressed to RACES @ ALLCA are sent over the same system for information to all who need the current status on such events as an earthquake, flood, or major wildfire, for example. Numerous fire crews advise they rely on the packet (digital) situation reports in order to keep abreast of events as their ONLY source of information.

These BULLETINS are addressed to the emergency management agency managers. They are intended for delivery by the Radio Officer, with the intent that it will strengthen the rapport between the Agency Coordinator and the Radio Officer, particularly if they take the time to discuss the material they contain.

The purpose of getting the Radio Officer into the Emergency Services office is to preclude the biggest bugaboo to volunteers; that is, namely, "out of sight is out of mind". Too often volunteers sit back and wait to be called by the officials and wonder why it never happens. Worse than that are any unattached and undisciplined volunteers who dispatch themselves into the fray with all good intentions, but in so doing further obfuscate

the disaster.

Unfortunately, however, these bulletins are sometimes not
delivered to the agency for several reasons:
(a) the Radio Officer or other person doesn't have packet, and no
one else has told him/her they exist.
(b) the Radio Officer isn't doing his/her job or has delegated it
to staff without following up to be assured it occurs;
(c) recipients don't read the header or grasp the significance of
the agency address status;
(d) local Amateurs THINK they belong to the emergency
communications unit but really don't do anything about it.

The next four bulletins "We Wait, but No Calls", will cover
related misunderstandings.

SUBJECT: OPS - We Wait, But No Calls! 1/4
RB 351 RELEASE DATE: Nov.7, 1994

The saddest reports from your letters and comments are those that
speak of a unit that wants to serve its community but does not
get the opportunity to do so. It happens frequently, so lets
review some probable causes.

There is often more than just one reason, so it is likely an
interplay between several. Anyone of them can be the main
problem; yet solving one may solve others as well.

Typically, no emergency management agency is going to "call out"
a unit unless it perceives a benefit greater than the hassle of
taking the time to get involved with the unit in the first place.
An agency calls out its SAR (Search and Rescue) unit when it has
a clear-cut need to search and rescue someone who is lost, etc.
Furthermore, the successful SAR unit is highly trained and
skilled, completely dedicated and will respond whenever called
upon. However, Comm Units that don't get called on are seldom
that well trained, dedicated and willing to go anywhere at
anytime. Also, communications needs are seldom so clear cut. They
often are drawn out and sneak up on the agency before it realizes
it has happened which is a major difference in the way it affects
human perception as to the "need". At that point the agency may
be so involved with the solutions that it hasn't time to "call
out" some unit with which it has little real familiarity or
knowledge - one that exists on paper and that's about it.

By the way, the idea of a "call out" is fraught with
misunderstanding. To many people it means the whole ball of twine

is needed and the whole crew is to hold the kite string. In other words, it means that the entire unit is activated and put to work. It frequently doesn't work that way and units that don't get activated or called upon seldom grasp the following three essential fundamentals:
(1) an enmasse call out is not how getting "called upon" works in today's real world;
(2) the more likely need is for a few key people early on, not later when its too late;
(3) the real potential for being "called upon" (as contrasted with a "call out") lies within many months of work and liaison long before there is ever a need.

The other side of the equation is the agency official's mental viewpoint regarding, and past experience with, either volunteers or "hams": are the hams amateurs (small a), or are they professional performing Amateurs (with a capital A)? That will be in the next bulletin.
EOM

RACES Bulletins are archived on the Internet at ftp.ucsd.edu in hamradio/races or in hamradio/packet/tcpip/incoming and can be retrieved using FTP. The opinions stated are those of the author of the bulletin and not the poster.

some stuff deleted

: The only argument that seems to hold water is the forced recruiting
: argument. Having the government act as a forced recruiter to introduce
: people to Morse who would otherwise avoid it, is the only argument that
: may have some validity. Some people do seem to take to Morse after they've
: been forced to struggle through the conditioning. Those people might never
: have become Morse operators otherwise. However, on the flip side of that
: are the people who may have become good operators of other HF modes who
: were discouraged from doing so by the Morse testing requirement. I think
: losing the latter is more damaging to the amateur service in the long
: run than gaining the former.

The Amateur Radio Service has had the Code requirement for a very long
time. I know that you see a great deal of "damage" from that, but
honestly I do not. It seems to be a pretty darn healthy
service/hobby, if you ignore the poor behavior and attitude that is
creeping in, thanks to the general trend of society these days...not
to any test or no test.

: The reason I say that is that only a very small percentage of amateurs
: are innovators, and less than half are service oriented. To arbitrarily
: restrict the pool of operators by a test that isn't necessary to successful
: HF operation serves to limit the potential number of innovative or service
: oriented operators available to the amateur service on HF. That in turn means
: a reduction in ability to meet two of the major goals of the service.

: Gary

This is a specious argument at best. I don't believe there are masses
of "innovative" folks waiting to rush in when the code requirement is
dropped. And if there were, who says they'd "innovate"? And service
operators? A tremendous amount of service operation takes place on
two meter FM, a mode which requires little more than 300 dollars and a
knowledge of where the push-to-talk switch is located. If you want to
increase the service operators, just elimininate the theory tests...they
are irrelevant. Same logic.

Bulletin 352 OPS - We Wait, But No Calls!! 2/4
Release Date: November 14, 1994

What to do when the agency officials have had an unfortunate
experience with volunteers or a "ham" who was a real amateur in
the true meaning of the word? Ah, this one is the hardest of all
situations to tackle.

We begin by trying to understand the perspective of the person
who had the unfortunate experience. Only if we are able to "put
ourselves into the other persons shoes" can we really come to
grips with the situation. IF that can be done, then what is
discovered usually offers a clue to the approach to follow.

Sometimes, however, what one states to be the "reason" isn't
really that at all. In the early years of my career in the real
estate field there was a class where the instructor said she'd
learned that most house sellers seldom ever state the true reason
for their placing it on the market until they'd been asked the
same question at least four times. She felt that by the fourth
response they were getting down to the true motivation. So it is
with most of us, we have "reasons" we logically assign for doing
something, but down deep there may be a reason that is so well
hidden we've forgotten it; and it remains hidden until someone
gently coaxes it out as did the real estate teacher.

Knowing this, we can apply it to the agency official who,
claiming one reason for not using an emergency communications
reserve, may have one or more other reasons. In some agencies it
is entirely possible that the person is carrying so many "hats"
that there is literally no time to devote to the problem. Just

last week we heard of a county that closed its office of emergency services due to budget restraints. What response capabilities exist will now be under the fire marshal. In that case the fire marshal is a FCC Amateur Radio Service licensee. Thus there was a happy solution but it doesn't always work out that well.

One way of approaching a person with too many jobs is for the Radio Officer to ask if there is some way he/she can alleviate some of the tasks along the line of their own experience, skills and talents (such as administrative, management or such.) When we strengthen others, give them opportunities to grow and expand, to reduce their stress, we are helping in ways that are productive when least expected. Forget about feathering ones own cap or whether it fits ones own ego structure. Find a task that needs to be done and do it. Wasn't it Kaiser of ship building fame in WW2 who said "Find a need and fill it"?
Continues next week.

RACES Bulletins are archived on the Internet at ftp.ucsd.edu in hamradio/races or in hamradio/packet/tcpip/incoming and can be retrieved using FTP. The opinions stated are those of the author of the bulletin and not the poster.

: --
: 73, Cecil, KG7BK, OOTC (All my own personal fuzzy logic, not Intel's)

Cecil,
It isn't a command of the English language I lack, or compassion. It
is a lack of patience for someone who accuses anyone who supports the
code requirement of "ganging up on the (genetically) less fortunate
and denying them access to the publicly own airwaves because they are
biologically incapable of distinguishing the width of an audio tone."
Where the Hell do you get off accusing me (or anyone else) of that
crap? That is about as far off the point as you can get.

It is obvious that you carry some heavy emotional baggage in this
area, but it does not give you the right to make such accusations.
I'm sorry your dad can't get acccess to HF. My father, at 85, will
not be able to advance beyond his Novice because of the code, so he's
pretty well shut out too. I don't blame the world, or the FCC.

I talk to him on the phone, and his life is still full and happy without HF.

As far as your wish that I suffer the same fate of the "genetically less fortunate", get a clue. We are all kept from doing things we would love to do if we only had the ability. I have more than my share of those, thank you.

You can flame me all you want about my views on the code, my spelling errors, my logic, or even my "cw damaged brain". But you went over the line this time, Cecil. If you can't manage an apology next time, the least you can do is eliminate the "73" from you sig. It's a mockery.

: Rich McAllister (rfm@eng.sun.com)

Good idea. Maybe they would have a little more appreciation for the
park, and not get lost. The basics of plate tectonics are pretty darn
simple, and if someone can't do a compass traverse or read a topo map,
they better darn well stick to the well-marked trails. You see, no
one said anything about not letting anyone in "at all".

Cross-posted to: rec.radio.amateur.misc,alt.home.repair,misc.consumers.house

The FM Broadcast Band (88-108 Mhz) lies in between TV's low-band and hi-band.

Cheaper TV antennas are designed to cover the whole two bands in one sweep, so they do an acceptable job on FM.

Commercial type of TV antennas (like cable operators use to GET the distant stations, if they don't have it delivered by a a satellite feed) are specially tuned to each channel. Anyone can buy them of course. Naturally, they have to be _aimed_ in the right direction.

The same companies that make TV antennas often make antenna specially tuned and sized for the FM frequencies. Go to the Thomas Directory, and ask for catalogs from a few companies. Or go to a good-sized business library, and look at the buyers-guide issue of a CATV/MATV trade magazine.

Tell you truth, you can build them yourself. Get the ARRL Antenna Handbook. Simple Arithmetic and journeyman level handyman skills will result in an antenna that's better than anything but the most expensive commercial ones.

If you are trying to pull in a station from a specific city that's far away, remember two points. Putting the receiver in Mono mode will enable you to succed with lower signal levels than stereo reception. And, putting an antenna _higher_ delivers results faster than making the antenna _bigger_.

: >of my posts where I actually take a stance that I am against the
: >testing. I just want this so-called "debate" to be civilized and
: >possibly actually persuade others to agree with me (or the other side if
: >their arguments are good enough). So far, you seem to be one of the
: >biggest apponents to a rational debate.

: Please reread what you quoted above (and the rest of the message from
: which it came as well). No screaming, just a series of reasons why Morse
: *testing* is irrelevant to the service. Now, reread Gregory's posts, or
: postings from his cohorts. Do you find *any* reasoned argument at all?
: Greg, and most of his cohorts, offer nothing but appeals to authority,
: IE the ITU requires it, which is no argument at all because that's what
: we're attempting to change, and appeals to tradition which boil down to
: "I had to do it, so should you". Blind obedience to tradition is not a
: purpose of the service, and amounts to nothing less than hazing.

Gary, I have never thought of you as being stupid, so I must assume
that you either possess a very short term, selective memory, or you
are being intentionally dishonest. Why don't _you_ reread my
(Gregory's) posts and see if I have ever said "I had to, so you should
too". Point out _one_ instance where I used appeal to authority, ITU
requirements, etc. in my arguments. Many of _your_ "cohorts" have
pointed out that my arguments are quite to the point...they may not
agree, but they appreciate that I have addressed the issues. As a
matter of fact, you yourself (wonder of wonders) have made that
comment to me.

: I welcome *rational* debate, but all that seems to be forthcoming from
: the other side is emotion. There should be a good solid reason for
: the *government* to require a particular test element. In the case of
: Morse testing, the only reason the FCC has given is "because the
: amateur community (ARRL) wants it". Now the FCC's charter comes from
: the Communications Act of 1934, and that charter doesn't allow the
: FCC to be responsive only to the whims of existing licensees. It charges
: the Commission with acting in the *public* interest. So the challenge
: to testing proponents is to show how the public interest is promoted

: by continued pass/fail testing of manual Morse as a gateway to other
: amateur operating modes and frequencies. IMHO, a reason such as, "I
: want the government to keep acting as a forced recruiter for my favorite
: mode so I'll have someone to play with" is not a sufficient reason.

: Gary
: --

Gary, you invite rational debate, but you only go along with it until
someone brings up some points you don't want to address. Fine. But if
you want to make statements like the above, you better stick with the
attribution "they". Obviously you are confused about what _I_ have
been saying.

I was in the city yesterday meeting some friends and as I arrived early, I decided to check out the ham station at our local science museum. While I was up there, I got a call on simplex from one of the people I was supposed to meet . I told him where I was and said I'd meet him out front. As I'm walking through the museum towards the door, still talking, two burly security guards sneak up behind me and grab me on the shoulder "What are you doing with the walkie-talkie, Buddy?" -- scared the hell out of me, I jumped about a foot. I said that I was talking to a friend. "Are they in the building?" asked one of the guards, about a second later the other said "we're going to have to ask you to leave the building." I asked why and one said "You can't do that in here." I said that there were several people up in the ham exhibit who were talking on HT's. One guard said "That's amature radio, that's licensed." I said that my radio was transmitting on amature frequencies and that I was licensed. At this point the second guard repeated his request that I leave the building. I wasn't going to press the issue, since I was on my way out anyway, but it made me a little disgruntled.
Any similar experiences?

> Cheers
> David GM4ZNX

I had an electrical engineering professor that used multiple choice exams exclusively. He would create the exam questions, then work out the answers, THEN determine the three most common mistakes that could be made while working on the problem. He did this knowing that most people will assume that they got a correct answer if it was one on the list and it was their first attempt. He was a BIG go back and check your work fanatic. He also spent alot of time putting exams together. He also produced some of the best EE students in the department, because we knew we had better know the material.

Multiple choice exams can be effective, but there are tradeoffs.

2814. Subject: How Do I Convert Local Time To UTC Time?

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-21 07:16:00 UTC
From: pve@dg13.cec.BE
Message-ID: <2ED049B6@smtp>
Source record: 256551

There is a very easy way to convert time to UTC. Its exactly 6 hours to UTC from CST. Therefore if you look at your watch, and see, say 9 pm, UTC its 3am, next day (you passed the 12); that is 6 hours difference, later; in other words the otherside of the watch face. Just look at your watch and move your eyes to the right side after seeing the 9 marker. Your eyes now fall on 3, which is UTC. Since Arizona is not on CST but Mountain, that is an hour earlier, add an hour and you have 4pm UTC. Thats real easy, no calculation needed.

Landline BBS 916-262-1657 temporarily limited to 2400 Baud!

SUBJECT: OPS - Information Unused??
RB 350 RELEASE DATE: Oct 31, 1994

These weekly BULLETINS appear in most full service packet radio BBS in the U.S. They are technically addressed to RACES @ ALLUS in order to be automatically filed in the bulletin board files sections. As to the topics these contain, they apply equal well to most government emergency communications units whatever their name.

Also during an emergency the OES SITREPS (Situation Reports) and situation summaries addressed to RACES @ ALLCA are sent over the same system for information to all who need the current status on such events as an earthquake, flood, or major wildfire, for example. Numerous fire crews advise they rely on the packet (digital) situation reports in order to keep abreast of events as their ONLY source of information.

These BULLETINS are addressed to the emergency management agency managers. They are intended for delivery by the Radio Officer, with the intent that it will strengthen the rapport between the Agency Coordinator and the Radio Officer, particularly if they take the time to discuss the material they contain.

The purpose of getting the Radio Officer into the Emergency Services office is to preclude the biggest bugaboo to volunteers; that is, namely, "out of sight is out of mind". Too often

volunteers sit back and wait to be called by the officials and
wonder why it never happens. Worse than that are any unattached
and undisciplined volunteers who dispatch themselves into the
fray with all good intentions, but in so doing further obfuscate
the disaster.

Unfortunately, however, these bulletins are sometimes not
delivered to the agency for several reasons:
(a) the Radio Officer or other person doesn't have packet, and no
one else has told him/her they exist.
(b) the Radio Officer isn't doing his/her job or has delegated it
to staff without following up to be assured it occurs;
(c) recipients don't read the header or grasp the significance of
the agency address status;
(d) local Amateurs THINK they belong to the emergency
communications unit but really don't do anything about it.

The next four bulletins "We Wait, but No Calls", will cover
related misunderstandings.
eom

RACES Bulletins are archived on the Internet at ftp.ucsd.edu in
hamradio/races or in hamradio/packet/tcpip/incoming and can be
retrieved using FTP. The opinions stated are those of the author of
the bulletin and not the poster.

: Is anyone familiar with the Atlas 210x HF xcvr?

It was state of the art in its day, which was about the mid 1970's.
I got one a year and a half ago and used it while operating as YN1ASW
in Nicaragua last year.

: I'm going to look at it tomorrow night. The seller is asking $500.

I think that price is about 2X too high.

: It is a solid state unit that will run on 12v, has 250w of transmit power,
: and covers 10 - 160 meters.

You'll be lucky to get 100 watts out at 13.6 volts, and it will be
less at 12 volts. The 210x covers 80 - 10. There was a very similar
model, the 215x, that covered 160 - 15.

I liked that rig, it is still waiting for me in Central America, but
it was not trouble free. I had nasty problems with spurious
oscillations in the final on certain bands as the power level was
increased. This seemed to depend upon the match to the antenna. I
ended up being very cautious about operating when my housemates wanted
to watch television.

Subject: Hams on Bicycles! Info about BMHA

There is an organization for ham radio operators who are also bicyclists, the Bicycle Mobile Hams of America. This file will tell you a little bit about the BMHA.

From the BMHA Newsletter:

"BMHA got is start when a "Stray" in the June 1989 QST magazine asked to "get in touch with hams who operate their radios while bicycle-mobile, or while in any other human-powered conveyance," signed by Hartley Alley, NA0A. Twenty five hams responded, filled out questionnaires, and received a summary of the collected data.

"In April of '90, we had our first BMHA Forum at the Dayton HamVention. We played to a packed house, overflowed the room, and added 54 names to our mailing list. Our three subsequent forums have drawn increasingly larger audiences, and now BMHA is established as a 'regular' at this world-renowned event.

The BMHA is governed by a board of directors, led by the Chairman and Founder, NA0A, who also edits the quarterly newsletter. Membership is available for $10/year (US) or $15/year (Canada/DX). Family membership of two or more hams is also available for $15/year. The newsletter is published in January, April, July and October.

BMHA conducts an on-the-air network on the 1st and 3rd Sunday of each month. The frequency is 14.253 (+/- QRM) and the early session is at 1800 UTC while the regular session begins at 0000 UTC (Monday morning UTC).

A sample of the BMHA newsletter is available for an SASE.

The address is:

Bicycle Mobile Hams of America
P O Box 4009
Boulder CO 80306

(303) 494-6559

Back issues of the newsletter are available for $1.75 each. Inquire about
the availability when you ask for your sample newsletter.

73 and hope to hear you on the air

Your best reception will come from hooking your cable into your FM
receiver, *if* your cable system passes through the FM band. Many do, but
some have taken over the FM band to be able to provide more channels.
If that is the case, the tv antenna should provide good reception.

Which just goes to show that anyone can learn code. But the NAL's
you speak of are not being given out to CW operators. I honestly
cannot recall ever hearing of a violation notice issued to someone
due to a regulation infraction while that operator was using CW.
I've been reading QST since 1968 and have seen plenty of notices
posted but none given to a CW op. Can you cite just one case?

Hey, lets just eliminate the written tests, too! Some folks are
genetically incapable of learning electronics, too. Or doing math.
Sure wouldn't want to eliminate them from Amateur Radio!

This "denying individuals access to publicly owned airwaves" argument
is about as ridiculous as any I've seen on this group...from either
side.

How do you feel about eliminating all laws regulating uses of National
Park lands? They're publicly owned. How bout if we just opened them
up for everyone to use as they saw fit?

I think this holds for almost everybody on both sides of this "debate."
If we want to continue this argument, we should find some middle ground
to start from. Obviously, whether or not learning the code is relevant
should be something to prove, not a starting point.

If You are looking for yaesue ft-530 mods or mods for any radio, I strongly recommend the ftp site oak.oakland.edu I believe the directory is something like pub\hamradio\mods\yaesu but Im not positive.

They have all the mods you could possibly want for the FT-530. I own a FT-530 myself and I am looking for a mod that would allow me to use a TNC baud rate of greater then 1200, if you find one please mail me or post something.

Good luck! The mods are easy!
Thomas

So, were it not for the code requirement, the concept of a simple transmitter would not be "learnable"?? Until we learn code, we cannot move on to more advanced designs??

OK. I suggest Morse Code be a prerequisite for ANYONE entering an electrical engineering curriculum! I wish they had such a requirement when I went to school. All those analog circuit design courses would have seemed so much easier then!

Subject: 9 kHz AM tuning steps

Damas,

I have a Sony walkman which can be initialized in 3 different tuner modes
(USA, Europe/Asia, or Japan) by pressing different keys when installing the
battery.

1. Remove all batteries for 30 seconds to make sure the computer resets.
(be sure to remove the small memory backup battery if there is one)
2. Press one key while installing the batteries.
3. See how the tuner operates.
4. Repeat as necessary, maybe even pressing two keys simultaneously
while installing the batteries.

I doubt there is a switch inside, but maybe you can find a way to
re-initialize the computer to tune in 9 kHz steps.

Good luck! Wayne Estes WD5FFH wayne@csg.mot.com

>

Hey wait a minute here... I think I have found something that you *may
not* be up to date on. P.C. Electronics *does not* sell modified
Mirage Amplifiers. The fact is that Mirage makes several models that
are made (modified) specifically for ATV. I believe the correct model
that you listed above would be the Mirage D1010ATVN amplifier.
As a matter of fact, you will find that Mirage has several amplifiers
with the ATV suffix in the model number that are designed for use with
ATV. There are two though, the D15, and the D26, that do not use the
ATV suffix after their model number. I did look at my Mirage brochure
today, and the D15, the D26, and all the amps that have the ATV suffix
state that they are "specifically designed for use with ATV". Hey Gary,
welcome to 1994. I believe what happened while you were out bashing all
these ATV manufacturers was that P.C. Electronics and Mirage got
together and came up with a design of a few amps that would work with
ATV.

> >I'll bet that you will find that the LSB has been re-inserted during the

>

I really sort of doubt that the wonderful VSB transmitter was causing
any Mirage amp to be over driven. I kind of believe that maybe the
wonderful AEA transmitter wasn't as wonderful as they wanted us to
believe. Hmmmm, I wonder how come AEA quit making that wonderful
little device after a short period of time?

> >Are you saying that Harris and the other TV big boys are not using any

Well, ok, I'll take your word for it. I'll have to take another look
see at the local LPTV channel 57 transmitter. I could have sworn that
I saw something in there besides a harmonic filter, but I am not an
expert at such things like you are.

>

I happen to have ordered a couple of transmitters from P.C. Electronics.
Both times, they questioned me to make sure that I knew that without
the proper filtering that I would be radiating my signal outside the
amateur band. As far as I am concerned, they did their job. P.C.
Electronics makes the transmitters, and other folks make the filters.
Thats pretty simple isn't it?

I happen to use interdigital filters made by International Crystal Mfg.
I'll bet you have heard of them, did you know that they make filters
for ATV? Yep, they cost me about $425.00 each, if I remember right.
Expensive little buggers.

While we are at it, lets slam the makers of H.F. transmitters for not
including low pass filters on their gear. Lets slam the makers of
television sets for not including high pass filters on their receivers.
Lets also slam those folks down on 80 meters using DSB AM to communicate.
Lets slam the makers telephones for not including filters to keep out
all of us hams that generate nasty signals with our improperly
manufactured equipment. While we are at it, lets slam the manufacturers
of our modern two meter radios, not only have they made it a simple snip
of a wire to transmit outside of the amateur bands, but they have made
the receiver front end so broad that they are almost totally useless
when they get near a medium strong RF environment. I think we should
also slam the makers of home computers, when I get my UHF hand held near
the darn things I hear all sorts of nasty noise. Ah what the heck...
let's just slam everybody, I'm not sure if any of them are doing things
right and following good engineering practices, are you?

> >I have a great idea. Since there are no amateur VSB ATV transmitters

Hey, great! Would you mind sharing your designs and schematics? We are
in the final process of linking our ATV system with the Fresno area on
2 Ghz FM. You could save us a large sum of money over what we are planning to
purchase. I am not into RF design like you are, but I love to tinker and
build stuff.

Would you also include your designs and schematics for the 70 cm
70 CM transmitter. We are going to continue out here to improperly
utilize our resources. Heck, if we could build our own from your designs
and schematics, we could quit buying that garbage from P.C. Electronics
and others. According to you, we could also quit buying those damned
expensive filters from International Crystal. I'll bet they are not
going to like this at all.

I hope all the parts that I'll need are readily available. I live in
the sticks out here, and I would need to be able to order the parts
without having to make a hundred phone calls to find out who has what
part.

Subject: New RCA (small) satellite dish system?

Howdy,

Does anyone have knowledge or experience with the "new" RCA
satellite system. It uses a small, 18" dish and I believe
it operates above 10 Ghz. I'm seriously considering this
system as a viable alternative to CATV and standard VHF/UHF TV.

What impact does weather have on such a system. I've heeard that
signals >10Ghz experience substantial signal attenuation in
rain.

Thanx for taking time from your busy day to read and/or respond.

Correct, Alan, that is usually the best way to go. It is extremely difficult remembering that N9xxx is at location YYY. Usually the operators will go the way Net Control goes. I had the opportunity to run net traffic for relief operations during the cleanup of the plane crash in Indiana a couple of weeks ago. Naturally, tactical descriptions were chosen for the sites that had operators. We had Canteen1, Canteen 6, and Canteen 8 which were relief posts for the Salvation Army operation. Whenever there was a shift change it got most confusing and people resorted to this is Canteen 6 with info for Canteen 1. And as net control I found that having those ducks in a row I could respond by calling: Canteen 1 - N9zzz, Canteen 6 - N9yyy has info for you. This is N9WHG net control. And by my using everyone's calls, it encouraged them also to follow that protocol.

Once we got into the shift, everyone was pretty familiar with who was where so callsigns were used. Obviously, we didn't have the large number of operators at one time like the marathon did, but the combination of clear tactical calls combined with good net control operations helped make information flow and maintain legal requirements.

It also helped that Major Pat McPherson who headed the relief effort for the Salvation Army was also a ham. So we were ususally only a PTT switch from the chief.

I don't think it can be said enough that, in any kind of net operation, be it for an event like the marathon, an emergency like a plane crash, or just a ragchew net, the value of a net control operator who IS IN control is a valuable commodity. People recognize that and respect it.

Smiley... There must be a smiley here somewhere. Maybe it is under the word Weller. Hmmm, (lift, creak, bend, twist) nope, not there... (I will expect my commission checks for mentioning the word Weller twice... oops, three times... in one posting.) Maybe it is under the word blowtorch. Hmmm, (pry, pound, pound, sproing) nope, not there. Here, smiley, smiley. Oh well, never mind...

I am sure that many people do use 150 watt Weller (Four times...) guns and blowtorches to make up PL-259 connectors, but it really isn't necessary. Hey, your 15 or 25 watt pencil iron probably won't cut the cake. So, if you were serious about electronics anyway, you would have already bought a 40+ watt TEMPERATURE CONTROLLED pencil iron. Get a used Weller (five times.) Buy one of those pacific rim import irons with the LED temperature scale (several mail order houses, less than $70.) I've got a couple, work fine, occasional poor contact on the control potentiometer. Or take advan-
of a great deal from Fair Radio Sales, a hermetically sealed, government surplus, self-contained, house current Weller (six times...) solder and DESOLDER kit with six straight tips, two bent tips, in three temperatures, seven desoldering tips, dip tip, plcc tip, wire stripper tip, coating removal tip, and 40 watt heater element that is still in the current Weller (seven times...) catalog all for less than $70.00. (Whew... Pant, pant...) I would bet the equivalent new kit would exceed $300.00. The value in a temperature-controlled 40 watt iron is that it won't overheat your delicate projects (which even a simple 15 watt pencil can do,) yet can generate enough heat to solder most any challenge the hobbiest may find.

Back to the topic at hand. The secret to perfect soldering is the rapid transfer of heat to the solder joint to reach the desired temperature, the flow of solder throughout the joint, and sufficient heat to boil off the flux and complete the amalgamation of the solder to the joint. The first step is the trickiest. The tip of an iron MUST always be well wetted with solder. Not just the tip of the tip, but the whole tip from the point to where it attaches to the heater if at all possible. Always use a damp solder sponge, keep a soft wire brush handy, keep some "Tip Tinner and Cleaner" from RS nearby. When the flux begins to crust up the tip, brush it off. Immediately re-tin the exposed areas of the tip.

Now for the "you never too old to learn something" lesson. I am over 44. for thiry years, I would wipe my tip clean on the sponge AFTER doing some

soldering. Well, a couple of years ago, I learned that a tip will survive longer if you only clean your tip BEFORE soldering.

The RS tip cleaner is best for breaking in new tips. It is a stiff mixture of powdered solder and flux. When you are heating a new tip for the first time, you push it into and roll it around in the mix. This insures that solder tins the tip before it can oxidize. Now, Weller (eight times...)pre-tins only about 1/4 inch of their tips. This makes it more of a challenge to tin the rest of the tip, but it is still worth doing. As a side note, the better tips are iron plated. This inhibits the solder and flux from eating away the copper in the tip.

Now for the nitty gritty. (Or "Why has this bum rambled on so long without talking about sodering PL-259's?") I find my 40 watt irons perfectly adequate for soldering these in a wind free, room temperature place. I usually solder the center conductor first. With RG-8 type cables, I place the side of the soldering tip against the notch in the connector center pin. I melt a small drop of solder on the tip where it falls against the center conductor.

(I know this violates the golden rule of soldering, "Don't bring in the solder until the joint is hot enough to flow the solder." But the truth is that I haven't followed that rule in years. I introduce the solder early so that it can form a more efficient heat bridge to the joint. The rule I follow is, "Don't take the iron away until you see the flux boil out from the joint and see the solder flow freely into the recesses of the joint.")

When the solder starts to flow into the center conductor, I feed enough into the pin to insure that it is flowing at least half way down the pin. After I see the flux boil out of the pin, I remove the iron and let the pin cool enough for the solder to set up.

Soldering the braid is the hardest part. This is where having a fully tinned and cleaned tip is essential. Many of us forget that the heat is not generated at the point of the tip but at the heater end. When soldering the braid, I heat the body of the connector by rolling the tinned heater end of the tip up against the solder holes. This gives the greatest heat transfer from the iron to the connector. I then melt a drop of solder on the iron large enough to puddle in the solder hole. I intentionally am not thorough in soldering the first hole. Soon after I see the solder flow into the first hole, I move on to doing the same thing on the next hole. When solder flows into the next hole, I move on to the third and then the fourth hole. By now, the connector body is hot enough at the solder holes to allow the solder to flow freely into the braid. I check that it is hot enough by flowing solder into one hole while heating another with the iron. When I can see solder being freely sucked into the braid all around the connector, I consider the soldering finished and remove my iron from the connector.

Time is very important in soldering. Even with my 40 watt pencil iron, I expec
t
each step above to take 5 or 10 seconds. Any solder attempt that takes too lon

g
permits too much heat to flow from the joint to the surounding components. Thi
s
can burn PC boards, melt coaxial dialectrics, damage semiconductors, and change
the value of passives. That is why a well tinned tip is essential. It allows
the fastest heat transfer to the joint and the quickest completion of a secure
and stable joint.

Golly gee. I sure have rambled on excessively about soldering connectors. Eve
n
when soldering RG-58 into PL-259's with reducers, my 40 watt iron is powerful
enough to melt the solder into the braid and against the reducer. Again, I hea
t
the solder holes with the tinned side of the tip closest to the heater. I am
not saying that you shouldn't use 150 watt Weller (nine times...) guns or blow-
torches. Just that 40 watts seems powerful enough for me.

I sure hope that Weller (ten times...) sees my incidental mention of their
products and rewards me commeasurately. And, hey, a little kick-back from
Radio Shack and Fair Radio Sales wouldn't hurt either.... (Smiley... There
should be a smiley here somewhere...)
Bye... Ted..

>prevent the Cross Band Repeater from being able to transmit. Is that true?
>If so, any way around it?

If your cross-band rig has a one-way only mode (for example, the
TM-741 does this), then you can transmit through the crossbander, but
receive directly from the repeater. That assumes that you can hear
the repeater directly with your HT, which is often the case.

This, in general, is a way to be able to use your crossband rig on
repeaters with long hang times. Furthermore, it makes it easy to
satisfy the FCC's ID requirements, since you are only retransmitting
your own signal, and presumably you ID when transmitting from the HT.

To all radio amateurs

SB PROP ARL ARLP048
ARLP048 Propagation de KT7H

Solar flux was down a few points last week, hovering around 80.
Geomagnetic disturbances were also down, with the A index in the
single digits.

Solar flux should rise about 10 points over the next week, and then
drop below 80 through mid December. Active geomagnetic conditions
should return around November 20 and 21, and there is the
possibility of a geomagnetic storm around November 27 and 28.

The latest long range forecast shows solar flux an average two points lower a year from now, and 13 points lower two years from now. The current solar flux cycle is now expected to reach minimum around October, 1996, with a sunspot minimum around May of that year. Current projections show the next solar flux cycle peak around August, 2000.

Sunspot Numbers for November 10 through 16 were 45, 45, 69, 11, 11, 11 and 36, with a mean of 32.6. 10.7 cm flux was 80, 79, 80.2, 81.2, 78.7, 79 and 79, with a mean of 79.6.

This week we have a special forecast for Sweepstakes with two domestic path projections.

The path from Seattle to Arizona should be open on 80 meters from 2245z to 1600z. 40 meters will probably be open around the clock, with the best signals from 0630z to 1100z. 20 meters looks good from 1700z to 2300z. 15 meters does not look good over this path, except for possibly around 2000z.

The Illinois to Florida path should be good on 80 meters from 2100 to 1330z, and 40 meters around the clock. Check 20 meters from 1430 to 2100. There is a possibility of an opening on 15 meters around 1730 to 1900.

Subject: DXbase Problems; An Update

Thanks to all those who responded to my posting regarding problems with the DXbase program's reliability of the RS232 link for HF radio control. I have had this problem for two years . The recent Internet posting came about because a friend , K5ESW (to whom I had recommended DXbase about 18 months ago) , was conducting a survey on PacketCluster regarding this particular DXbase anomaly. He did not have Internet access so I offered to post his survey to Internet for him in order to broaden the pool of respondents.

Many DXbase users may actually have the problem and not realize it. If you have Dxbase set up to control your HF rig and are using it to autopopulate the BAND field when you log a QSO you might be mislogging the BAND without knowing it. DXbase doesn't alert you when it loses the link to the radio when you are logging a QSO and will autopopulate the last band (or the default band) into tha band field instead of the actual band as read from the link to radio. The only 'notification' you get is that the exact frequency does not get autopopulated into the notes field. It is my opinion that DXbase should either automatically reinitialize the link to the radio before it executes any task that is supposed to use information derived from 'reading' the radio status. This is

especially important in the 'ADD QSO' mode. If it can't establish
the link there should be a positive visual and audio alert that
the radio link has failed. This feature is present in other less
important 'modes' of the program.

You can check to see if you may have had the problem in the past
by reviewing the "notes" field of your chronological log. If some
of your QSOs are missing the autopopulated frequency in the notes
field there is a good chance that the QSO's BAND entry may be wrong
unless it is a QSO for which you manually entered the Band with the
radio powered off or logged while you had the USER SETUP ' RADIO'
field set to 'none'. I found about 2% of my QSOs were
mislogged due to this problem. I discovered it when I began
receiving QSLs back marked 'wrong band'. K5ESW recently discovered
he had the same problem.

It was hoped that if the problem was being experienced by others,
we would find someone who had found a universal workaround solution.

Some suggested workarounds that were received are now being tested.

In the meantime I have received a message from W8ZF , one of the
programmer/owners of the company that wrote DXbase. An unedited
copy of that message follows:

Mike,
There are a number of fine dx logging programs on the market.
If DXbase is as bad as you say, I suggest you don't wait for
another one to come along so that you can "switch in a minute."
Might I suggest DXlog, WB2DND, WJ2O, Turbolog (DOS) and the new

MFJ for Windows and the AEA program for Windows. They all
CLAIM to have the features and performance of DXbase.

Despite numerous calls and mailings and direct interface and
service, you whine like a jet engine. Please go try our
competitors' products and take your griping with your. You
are an ungrateful cuss who is po'd because we didn't give you
the answer you wanted to hear regarding your serial port
problems.

PLEASE -- go bother our competitors and take your griping
with you!

Thanks.
Dean W8ZF

<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<
<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<

Perhaps the attitude of the above response explains why it
was necessary to resort to a survey of users to try to solve
the problem.

Actually there have not been "numerous calls and mailings and
direct interface and service" as claimed in the above message.
Rather, I was told on my very first call to him (2 years ago),
that my problem was with my hardware or IRQ conflicts and that
"this problem is rare".
I had already tried the program on other PCs I own and they exper-
ienced the same problem , so I knew the problem wasn't specific
my hardware. I told him this during the phone conversation. He
asked me to upload my config.sys and autoexec.bat files to his
BBS and he would look them over and make recommendations. I did
this but never got a response. In 1993 I asked via PacketCluster
messages if others were having similar problems. Several people
did but no one had a universal workaround.

There has never been an attempt by the DXbase programmers to
work with me in resolving the problem. They considered the problem
as unique only to me when I know from communications with other
DXbase users that it is not.

I don't think DXbase is a 'bad' program. On the contrary, I think
that for my use it has the best combination of features and the
best overall user interface of the programs that I have seen.
It does have some very annoying problems and attributes though.

It's the uncooperative , POOR USER SUPPORT that I have a problem with.
I have already purchased and tried 5 different I/O cards on three
different PCs (two 386 and one 486) so it's not true that I "didn't
like the answer I got". I attempted the recommended corrections (and
lots of unrecommended corrections too) but they did not correct
the problem.

I have been unable to establish a dialogue with them and so I have
had to resort to other forums to attempt to find remedies.

If there is genuine concern from the software authors regarding
identification and resolution of the problem I invite them to
contact me with an open mind and cooperative spirit.

Meanwhile if you find you have the problem , let me know and
I'll put you on the mailing list for any workaround solutions
to the problem.

>could really prove their worth and defend their use of the airwaves. Any
>suggestions? Am I totally out of touch with reality? What about ARES and
>RACES - where does this fit in?

This idea has been floated before. Unfortunately, there are some problems.
The first problem is that hams generally won't monitor a channel they
don't use. The second problem is that individual ham stations often don't
have very high or very well located antennas. So the consensus seems to
be that emergency calls should be done via repeater since there's more
likely to be a ham monitoring, and because the repeater generally will
be in a higher location and have a better antenna.

The ARRL has a system called Long Tone Zero that they recomend for
emergency alerting. What that is, is a couple of seconds of the
zero TT signal. Decoder circuits have been designed to unmute receivers
on reception of the signal.

Gary

Subject: How Do I Convert Local Time To UTC Time?

<3aj9mu$p9v@news.CCIT.Arizona.EDU>
Organization: Eskimo North (206) For-Ever

Instead of having to try and make the conversion numerically, and have
to factor in whether or not you are currently on daylight savings time,
it is much simpler to just turn on WWV/WWVH on 2.5, 5.0, 10.0, or 15.0
MHz (depending on the propagation). They broadcast the "Coordinated
Universal Time" (UTC or Zulu time) once a minute.
-
Once you have the UTC you can add or subtract your local time and figure
out the difference to add or subtract which applies until the next time
a daylight/standard time transition occurs.
-
As a matter of good DX-manship, it is standard practice to immediately
go to WWV/WWVH after logging some "all-time new one" to verify that your
shack clock has not gotten somehow out of whack. This is a good double
check on your time logging and can prevent a "not in the log" response
to your QSL from some rare spot that may not again be activated for 10
years.

Subject: Is it must me?

My two cents worth on the alleged dumbing-down of ham radio.

Hasn't it always been the case that "high tech" stuff becomes easier to use and
so knowledge of the theory of operation becomes less important? Look at
cars...when they first came out a person had to be a mechanic to drive one.
Now, lots of people barely know where to put the gas in. How many people know
how a TV or VCR or CD player work? Personal computers are the same way. 15
years ago if you wanted a PC you had to build it and write the operating system
yourself. Now you can buy them in drug stores. Internet is moving the same way.
A few years ago you had to deal with arcane Unix (isn't that redundant?)
commands like ftp, telnet, etc. to get on to the net. Now with all the services
like AOL, Compu$erve, etc. anyone can do it. We have lots of net lids, too, who
post to the wrong groups, post commercial notices, etc. As ham radio technology
gets easier to use and people don't have to roll their own rigs, more people
are going to be drawn into it. As it becomes unnecessary to build your own gear
the necessity to learn the theory becomes less and less. It's just natural
evolution. And as more people get on the air, it becomes more important to
learn how to get along on more crowded bands...the theory of how the gear works
isn't that important anymore. If the licensing requirements need to be more
stringent, it's in the area of rules, regulations, and operational techniques.
Theory is just not that important any more, no more than knowing how a car

works is necessary for one to be a good driver. It's like the code...people who use it will learn it. People who want to build their own gear will learn the theory, too. Not being able to draw the schematic from memory for a class A tube-type amplifier doesn't in itself mean one is a poor operator or shouldn't be allowed on the air.

Guess that's probably more than two cents worth...

Subject: Please read: 6M AM equipment SURVEY

In article <3a8s7m$qr4@newsbf01.news.aol.com>, rbellville@aol.com (RBellville) says:
>
>I'm putting together some info regarding 6 meter AM radios. I'd like to
Well, not too much danger of 6M going "the way of 220", as it used to be TV channel 1.
I suppose it could be re-grabbed for similar usage. Actually, 220 was stolen
because of its desirability and the political/economic clout, not due to its
lack of use.... 6 meters, at least out here in the unpopulated West, has
always been a deserted band except for one or 2 gung ho retired types who
called CQ day and night, the most of us relied on monitoring the FM BC
band and the lower TV channels to watch for openings.... and many's the
time I've watched snow-free TV on channel 2-6 from Canada etc but NOBODY
was on 6...
I was hooked on 6 from my first contact, which was interesting. When I
got home from VietNam in 1970, I ordered a Knight-Kit TR-106 from Allied
Radio, who was in the process of closing them out. As I recall they had
sold these kits for years for 149.95 or so and my closeout price was
69.95. I worked in a TV shop then and had some equipment of my own so
getting the kit built and aligned was no problem, BUT there was NOBODY
to talk to! I'd seen these pix in QST showing a ham with a TR-106 and
a shack wall full of 6 meter QSL cards... what I didn't realize was 1970
was at the low end of a previously fantastic sunspot DX cycle, and that
nobody operated 6 unless the band was open. I even installed it in my
pickup and drove several times the 75 miles to Albuquerque with it,
parking on 9 mile hill overlooking the city and calling CQ to no avail.
The TR106 had a xtal controlled transmitter and a tunable receiver that
drifted horribly (it had a nuvistor tube in the VFO that continually heated
up the VFO box). After playing with it for a few months I put it away,
no one to talk to. A year or so later I moved my trailer house to the
boondocks several miles from Grants, NM, and of course had to take down
my HF dipoles and for the first few months at the new QTH the only antenna
I had available was the 6 meter whip mounted on the air conditioner on the
roof of the trailer which I'd never removed. I hooked up the TR106 to it
again and tried it once or twice, still no luck. So it just sat there
and gathered dust.
One Sunday after church we had a couple of missionaries over for lunch and
one of them spotted the 6 meter AM rig and said "Oh, you're a CB'er, huh?"
So I explained to him, no, I was a ham, and this radio is on a band that
no one else around here uses, but if there was, this is how it would be
used.... I warmed up the radio and keyed the mike and called a simple
3 X 3 CQ and unkeyed the mike. Just as I started to explain to the visitors
that no one would answer, etc, a voice blasted out of the speaker, like
he was next door, "... WB5AOX this is Whiskey Zero etc etc... in Missouri!"
I about swallowed the microphone in my astonishment, I promptly offended
both my wife and my visitors by staying on the radio the rest of the
afternoon, merrily working dozens of 6m "DX" with my single xtal of 50.4
MHZ. I had not previously realized how "skip" affected 6 meters, and even
worked a local or 2 over the ensuing years, learning how to watch TV ch 2

for openings, etc. One station I worked down in TX learned I was stuck on one freq and he mailed me , gratis, his collection of several crystals for other great 6M frequencies. Eventually I even got the external VFO for the transmitter. Of course, SSB was starting to dominate 6 and many times I could hear the WUFF WUFF of SSB activity around 50.11 but no takers on AM so I eventually built a homebrew transverter for my HF SSB rig to get me on 6 SSB and eventually sold the old AM'er for 35 bucks or so, including VFO, at the Flagstaff AZ hamfest. I've also used an old Lafayette 6M AM rig at a club station, most of the cheap 6M AM rigs of those days had similar problems with drift, etc, you had to retune the receiver every few minutes or you'd lose the station you were talking to. The Cleggs and other higher quality rigs had no such problems.
Sorry to blah on like this, but there you go....
Jim Devenport WB5AOX (now active on HF, 2M via the WB5AOX crossband remote base with control inputs on 224.94 and 444.65 MHZ 103.5 CTCSS)

>designed for 902MHz operation? I would welcome a copy of such a design,
>either band...could we prevail upon you to post one for us Gary? With
>an audio sub-carrier capability too please?

The problem with doing it at 902 is that there isn't enough bandwidth available to make good use of the FM threshold improvement. You want a modulation index of at least 5 to take best advantage of the threshold. That means a signal bandwidth of about 30 MHz. So it's necessary to venture up to the microwave bands to find that. Fortunately, active

devices that operate at 2.3 GHz aren't very expensive anymore, and
really high gain antennas aren't prohibitively large.

I'll whip something up and put it up here in the next few weeks
since several people have asked for it.

Gary

I quite understand the point you are making. It is far too easy in a multiple-choice question to test simple familiarity with nomenclature rather than understanding. It is similarly possible to write bad questions in a written-response type exam. I think it is possible, with care, to create a multiple choice examination that is fair, reasonable, and well-suited to amateur radio *This does not mean that all multiple choice questions are good*

The flaw in your multiple choice example is obvious, classic, and, regrettably common. However, questions for written answers have their own problems. Your Colpitts example is bottomless - how much detail is needed ? It is difficult for a candidate to decide where to stop.

Examiners vary a lot, and need to be skillful to mark written answers fairly. They can be opinionistic. Written exams are now far enough back in the past for memories of their particular problems to have faded. They don't make reminiscences like they used to!

Much of the improvement I think you would like should be possible in a multiplr choice format, provided the quality of the questions is improved.

Cheers
David GM4ZNX

Ok, how's these?

- It's fun.
- It encourages the fading art of experimenting and building your own
equipment, due to the simple nature of radios for transmitting and receiving
Morse.
- It's a hand-ear coordination skill that's actually worth something, compared
to, for instance, mind-numbing video games.

: the folks out there talking CW at > 35WPM and who can design antennas and
: radios should have additional recognition.

There are some people who make very strong contributions to amateur radio. People who, by example, promote better operating standards, who design equipment that moves the hobby onwards, who develop new modes and who encourage and train new amateurs. We owe our very future to such people. We have both selfish and altruistic reasons to encourage them to continue and, if possible, to expand their activities.

I'm not convinced that yet another licence class would work on these people, they're busy enough doing what they're good at to want to be distracted. At the highest level, who could concoct a suitable exam ? What extra operating priviledges could you use as bait? Many of these people are specialists. It could actually be discouraging for someone who can pass the 40wpm CW test to be blocked from the new "double-plus-super" licence because they can't get through the transceiver design test, or vice-versa.

These people have already found their own motivations. I don't think anything as cumbersome as legislation could be as versatile or effective. Our task is to recognise these people for what they *DO*.

: I guess I am saying that I thought it was a little too easy.
: Dave

Perhaps you prepared well. Perhaps you learned the material so that you can use it, for life, not just for the fleeting moment of an exam.

Perhaps it was too easy, but if it made sure you knew at least enough to avoid problems in the modes and bands open to you, it was adequate. It sounds as if you'd like to go further. That's great, you'll find your own incentives and motivations - better ones than anyone else can create for you.

Cheers,
David GM4ZNX

>anxiousness to tackle "more advanced designs".

Of course not. I don't see anyone doing that. But I don't see that getting ON THE AIR and sending and copying Morse code MUST be done in order to design a simple transmitter. I certainly don't see a need for an incentive system to encourage and glorify the obvious.

I can build a simple continuous wave xmitter for VHF too. That was my point. You are right. The no-codes (or anyone else) do NOT have to skip the simple gear. They also do not need a "simple equals good" incentive system to realize that IF you want to experiment, you should start out with the basics.

I'm curious. How many hams out there (assumimg the incentive system encouraged the state-of-the-art modes rather than the most basic) think they would have tried (as their first project) a direct sequence spread spectrum receiver correlator before they thought, "Gee, maybe I should try something a little simpler."??

Perhaps I did not understand you. It seemed to me you were implying that without encouraging the simple modes, nobody would study them.

2828. Ohio/Penn DX Bulletin #183

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-21 13:24:00 UTC
From: kb8nw@barf80.nshore.org
Message-ID: <112194082447Rnf0.79b4@barf80.nshore.org>
Source record: 256382

SB DX @ ALLBBS $OPDX.183
Ohio/Penn DX Bulletin No. 183

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 183
BID: $OPDX.183
November 21, 1994
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, AC1O, AD1C, K2WR, WB4DBB, WB4IUX, K4CEF & the Southeastern Cluster Group, KF8VW, NW8F, K9AJ, F6AJA, SM5MX, JE2ERH and JH2PDS/1 for the following DX information.

3V, TUNISIA. A Japanese leading DX magazine, "The 59 magazine", reports that four JA operators (JH2CFD, JF2EZA, JR2RVL and JL2OYI) are in Tunis to instruct the locals on amateur radio operations, plus to setup a club station. The club station has been reported to have a 15m monobander, a tribander and will have some dipoles for low bands. The station will be running a FT-726 barefoot. The club callsign will be 3V8BB. The club station first appeared on the air November 19th at 0700z, on 20 meters SSB. Most of the activities seem to be mainly around 14025 and 14195 kHz. The JA instructors are to end the testing on the 20th, but nothing was mentioned what would happen after this day. QSL via JF2EZA.

9N, NEPAL. Willi, OE7KWT, is now active as 9N1WT and is using 9N1KY's station. He mainly uses 21270 and 14270 kHz around 0800z, but has been heard on the 14226 DX net around 1145z. QSL via OE7KWT.

A22MN QSLS. KEN, WA8JOC, has had a computer crash and all the logs for A22MN has been lost. Expect a several month delay on QSL returns. Bureau cards will be answered but they will be last. Ken said it would be March/April 1995 before he gets caught up.

BV, TAIWAN (Just a reminder). Tom, WB4IUX, has received final approval for his trip to BV and now has a firm schedule. He will arrive in BV on November 28th. He will operate for 4 days. He says to look for him on the 29th, 30th, and December 1st and 2nd at East Coast sunrise between 3508-3512 and 7008-7012 kHz.

THE GOLIST CONTINUES (but under new reins)! Jay and Jan O'Brien (W6GO & K6HHD) of the "The W6GO/K6HHD QSL Manager List" have decided to retire. For the last 15 years both have been processing and collecting QSL routes, making it available for DXers throughout the world. Also, they

have made it easier and quicker for a DXers, Contesters and the PacketCluster communities to find a QSL route. A special thanks goes out to Jay and Jan for their many years of dedication to this great service (from OPDX and the Ohio/Penn Network). Jay has announced that Paul and Nancy Smith, (N4FFO & KB4RGW), will be taking over the QSL Manager List ("GOLIST") including DX-BBS and the PacketCluster SYSOP interface (SH/QSL and SH/GO).

GJ, JERSEY. Rich, K2WR, will once again be active from the Channel Islands for the CQWW CW Contest. He reports that his operation will likely be low power with activity on 160, 80, and 40 meters only and using the callsign GJ/K2WR (or possibly GJ0/K2WR). QSL via K2WR. PLEASE NOTE: Rich mentions while ALL his GJ/K2WR operations go to K2WR, his May 1994 40 meter WPX operation as GH3DVC gets QSLed to GJ3DVC or the GJ bureau.

HZ, SAUDI ARABIA. HZ1AB will be active in the CQWW CW Contest as a Multi/Single entry. The operators will be Terry/N4KT, Bengt/SM0CCE and Thomas/SM0CXU.

J7, DOMINICA. Paul, K1XM, is heading up a Multi/Multi operation for the CQWW CW Contest using the callsign J77J. The operators will be Paul/K1XM, Charlotte/KQ1F, John/K4BAI, Walt/AC1O, Bill/G4WJS and Bruce/G4WVX. There will be some CW, SSB and WARC band activity outside the contest. J77J QSLs (which will be another stunning K1XM/KQ1F photo card) go to K1XM; all others to the individual operators' home calls. SPECIAL OPERATING NOTES: They will make a special effort to work Europe on 80 and 160 meters (antennas will be 150'-200' above sea level with a straight ocean shot to EU); also on 10 meters, propagation willing. They will try their best (if they get an opening!) to work Japan, but it will be tough on those bands with their antennas (there's a small hill between them and JA). Check their sunrise at 1017z and their sunset 2129z.

TO, MARTINIQUE. F6AOI, F6BFH and F9IE who were recently active from J8-land will now be active from Martinique (FM) as TO0P until November 27th. The JA group will operating 15-40 meters, CW, SSB and on the WARC bands. QSL via F6BFH.

XV, VIETNAM. Rolf, SM5MX (also 4S7MX and 5Z4MX) is now active from Hanoi signing XV7SW. Rolf has announced the following information: "New legislation on amateur radio in the form it is known in other ITU countries is expected to be passed in Vietnam in 1995. Pending this, I have been granted a license to operate as XV7SW on certain fixed frequencies. Here are my CW frequencies: 28016, 28019, 21016, 21019, 14016, 14021, 7033 and 3505 kHz. There is no QSL service in Vietnam. I have got the DXbase log software and intend to handle incoming cards myself to start with, as the mail service seems OK. I plan to print cards in December. Here is my address: Rolf T. Salme, Embassy of Sweden, Box 9, Hanoi, Vietnam." Reports from the Southeastern Cluster Group (SCG), indicate that several of the users worked Rolf on 14016 kHz around 2300z. The SCG also report that Rolf is making plans to be active in the CQWW CW Contest on 3505 kHz, but running barefoot and low antennas.

ZL8, KERMADEC ISLAND. It was reported on the 14226 DX Net that Barry, G4MFW (and he is also licensed as ZS1FJ), plans to operate from Kermadec Island for a couple of weeks, starting in March (1st, 13th or 14th). It was also stated that he has the license and that he will have a stateside QSL Manager. There was no mention of bands/modes to be used, or how many operators will be going.

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

The real problem here is that the equilizers weren't designed for speaker outputs. They were designed to go between the pre-amp and the power amplifier of a system.

Alkaline batteries have *no* acid. I had some alkalines that leaked all over inside some test equipment. I use vinegar slightly diluted with water to remove the residue. A substitute would be acetic acid (28%) reduced to 6% to make it about the same strength as household vinegar. Lead *acid* batteries can be cleaned with a mixture if baking soda and water. I use distilled water to be sure I`m not contaminating with other minerals etc. when cleaning battery accidents inside my equipment.

>We are lucky here in Arizona because the conversion is always the same.

As another poster pointed out, ain't so. The Navajo reservation observes DST. I discovered this on a trip out West a couple of years ago. Coming into Arizona from Colorado and staying overnight in Kayenta for visiting Monument Valley. We got confused when we next went to the Grand Canyon. The park ranger in Jacob Lake gave us info on how much time we had to catch the sunset on the North Rim. But, it didn't seem to make sense to me according to my watch. Also, I had to make overnight reservations before we went to the canyon as there were no local rooms available. Having called Cliff Dwellers Motel, I was told they would hold the reservation only until 8:00 p.m. This made us rush to see the North Rim, grab a quick supper at Jacob Lake and then speed off to Cliff Dwellers (boy, speeding down off of the Kaibab Plateu at night is neat). We managed to make it to the motel by, we thought, 8:00. But, it was only 7:00. Very confusing.

>UTC is always 7 hours ahead of Arizona time. 5:00 pm is 1700 military
>time. Adding the 7 hours that UTC is ahead of Arizona gives 2400 or
>midnight of the same day. 6:00 pm is 1800. Adding 7 hours gives 25 so
>an overflow of one day has occurred. Subtract 24 and you get 0100 for
>UTC or 1:00 am in the morning of the next day there because of the 24
>hour overflow. Some say the overflow occurs exactly at 23:59:59 plus
>one second to give 00:00:00 at midnight. At Texas A&M we said it was
>twenty four hundred hours at midnight.

When I was in the army, it seemed that if something was happening at the end of the day, midnight was refered to as 2400 hours. But, if it was happening at the start of a day, midnight was referred to as 0000 hours (be back by 2400 hours: we will get up at 0000 hours [actually any time around this time was/is generally referred to 'O dark hundred' when it refers to getting up]).

Either way is correct. What is not correct is 12:00 a.m. or 12:00 p.m., as no such beast exists. Noon is the meridieum (meridian) and a.m. indicates time before it (ante meridieum) and p.m. indicates time after it (post meridieum). So, 1200 hours cannot be before or after itself and 2400/0000 hours is both 12 hours before and after, so can't be just one. Noon and

midnight are the real times. But, using 24-hour format solves this problem; hey, it works for Europeans!

For amateurs, get a clock for the shack, put it in 24-hour format and set it at UTC and don't ever worry about conversion from local time. Always log contacts in UTC!

2838. DXBASE Problem Resolution

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-21 15:47:39 UTC
From: Waltk@pica.army.mil
Message-ID: <9411211047.aa23011@COR5.PICA.ARMY.MIL>
Source record: 256380

In regard to DXBASE complaints, namely:

"... DXbase program's reliability of the RS232 link for HF radio
control. I have had this problem for two years ."

I have the following workaround:

Follow the #1 rule of software engineering. "Don't do that!"

Come on, stop whining! If the field is not populated properly,
then simply enter the frequency manually, or back out of the
contact and re-enter the call-sign, again. I've had this happen
more than once. Granted its a problem. Come now, do you have
to get into this mental rut and ruminate about one shortcoming
for TWO YEARS?

I've found that the little black box between the computer
and the rig has an awful lot to do with these errors/problems.
Its a matter of buffering.

In all fairness to all concerned: A computer is not a miracle
machine that performs flawlessly EVERY TIME, and for ALWAYS!
The sooner you accept that fact, the happier an end-user you
will be.

As for the developer, I think Dean and his partner need to work
on their help-desk procedures, institute some form of software
configuration control system, if not already installed, and be
helpful and enthusiastic about BUGS as much as you are about
the NEW bells-and-whistles they may be currently working on.
Software development is 25% fun and glory, 25% ho-hum, and
50% headaches. Actually, the ratio tends to vascilate from
time to time.

Ne> explain the difference between the two and whcih would be a better
Ne> amp for the money. This amp will also be used in a mobile. Help
Ne> the confused!!!!!!

The difference between Class C and Class A or AB is in the
liearity of the amplification. If the amp is to be used in
ssb amplification the best I can recommend is AB1, if your
primary use is FM or CW Class C would be optimum. Class C
is also the most power efficient but it does not produce a
true copy of your signal as AB type amps do. There is good
information published on solid state and tube type
amplifiers in The Radio Amateurs Handbook published by the
ARRL.

>honestly I do not. It seems to be a pretty darn healthy
>service/hobby,

The service definitely is healthier *now* than it was during the 70s
and 80s, IE post-Incentive Licensing . During that timeframe, the
amateur service lagged behind population growth, and the average age
of operators was climbing at an alarming rate. Now, the service is
growing rapidly again, and the average age of amateurs is declining.
That's thanks almost exclusively to the code test free Technician class,
now the largest single amateur license class.

I see that as a positive, but only partially so. I believe that the
pendulum has gone too far in the case of the Tech license in that
the level of safety, theory, and regulation testing was also reduced
the year prior to dropping the Code test. That makes testing for this
license inadequate, in my opinion, to demonstrate the capabilities the
government has a legitimate interest (as defined in the Communications
Act of 1934 and Part 97.1) in maintaining among the amateur population.
But that's a side issue at present.

****
Note: my basis for arguing about government testing requirements is
based on the *legitimate* interests of the government in licensing
the amateur service. Those are spelled out in CA'34 and Part 97.1.
CA'34 specifically spells out that the regulations are to be in the
public interest. The interests of present licensees are of no more
consequence than those of any other citizen in this regard.

****

I see the real problem as Incentive Licensing itself. The multiple levels are both baroque and arbitrary in the priviledges granted for the test materials covered. I think a more rationalized system would be beneficial to the public interest.

The multiple levels of Code testing are only one part of Incentive Licensing, though certainly they are the most illogical. Code is the most self-testing of all amateur modes. You have to know Code to do Code, so a formal test is irrelevant to the public interest unless the government has some great fear of licensees sending bad Code on the amateur bands, I don't think that's a problem, and I doubt you do either.

To a large extent, the theory ladder is also irrationally applied. Either an amateur needs to know *all* those things to satisfy the government's interests, or some of those things aren't relevant to being licensed in the amateur radio service. I think many of the things on the written exams are relevant to the amateur service in general, and would like to see them all condensed into one exam for a license called simply "Amateur". But one step at a time, Rome wasn't built in a day, and amateur radio licensing won't be reformed in a day either. I'm satisfied to deal with the Code testing issue for now.

>if you ignore the poor behavior and attitude that is
>creeping in, thanks to the general trend of society these days...not
>to any test or no test.

Well we agree on something at least. Testing has no impact one way or the other on the behavior of amateurs on the air. That is a reflection of society. But then that contradicts your position that expending "effort" to take the manual Morse tests in some way impacts behavior on the bands. In fact, in another message I just reread of yours, you called that former position of yours "bunk". And I agree with that sentiment as well. I also agree that pride is important to the service, where I disagree fundamentally is with the idea that Morse testing fosters healthy pride in amateurs to such an overwhelming degree as to mandate a series of Morse tests to act as a gateway to various facets of the service.

I think that healthy pride has to be nurtured *every day*, and I believe that it is. As I've said before, I think amateurs take pride in their licenses for what those licenses allow them to *do*, not from the fact that they once passed some sort of "effort" test.

>: The reason I say that is that only a very small percentage of amateurs
>: are innovators, and less than half are service oriented. To arbitrarily
>: restrict the pool of operators by a test that isn't necessary to successful
>: HF operation serves to limit the potential number of innovative or service
>: oriented operators available to the amateur service on HF. That in turn means
>: a reduction in ability to meet two of the major goals of the service.

>This is a specious argument at best. I don't believe there are masses
>of "innovative" folks waiting to rush in when the code requirement is
>dropped.

Neither do I, see above. I'd be very satisfied to hook a *few* more.
Since innovators are so rare, either in or out of amateur radio, increasing
the pool will still leave us with the bulk of licensees as non-innovators,
but 0.5% of 10X is still a larger number than 0.5% of X, whatever value
you wish to assign to X, or whatever percentage of a population you want
to assign to innovators.

>And if there were, who says they'd "innovate"?

Innovators can't help themselves. As Issac Asimov once replied when a
lady asked him how could he think up all those crazy ideas, "How can
you *not*?"

>And service
>operators? A tremendous amount of service operation takes place on
>two meter FM, a mode which requires little more than 300 dollars and a
>knowledge of where the push-to-talk switch is located. If you want to
>increase the service operators, just elimininate the theory tests...they
>are irrelevant. Same logic.

It's certainly true that the bulk of public service operation *now* takes
place on VHF/UHF. There are some good reasons for that, but also a reason
that public service communications is less on HF is that arbitrary fence
restricting access only to code tested applicants.

Theory testing would be irrelevant too if amateur equipment were Type
Accepted and we weren't allowed to modify or repair it, IE like the
commercial radio services where theory testing is not required. However,
amateurs *are* uniquely allowed to build, modify, and repair their equipment,
and are in fact expected to be able to do so under emergency conditions.
Too few in fact can, but that's another separate issue. As long as amateurs
are allowed to tinker with their rigs, the government has a legitimate
interest in seeing that they have a minimum understanding of what they
are doing so that they won't adversely affect other radio services.
The same simply cannot be said of a Morse Code test. Other radio services
aren't adversely affected if we send slow or poorly formed Morse.

: I'm having a problem with a touch lamp putting noise into the house circuit
: and ruining my reception on all bands. I could just unplug it (what I'm
: doing now), but I'm looking for a more permanent solution.

Open up the bottom, rip out the module and put a switch recepticle on
the top for the lamp. It is real interesting when you find a band those
things are sensitive to and you work CW. They just flash away! I tried
ferrite, caps, inductors and cuzz words and could not get the thing quite
or immune to RF. I gave up and made it a grap lamp, i.e, grap the switch
and twist.

: I also have a
: television that is doing the same thing except that I don't have to unplug
: it; I simply turn it off. Here again, I need a better solution or my family
: will chain me up in the basement!

Gee, isn't that what you want? Chained to the radio? Try ferrite and filtering
the AC line cord. It might be going up the antenna also, in which case if your
using cable, try some ferrite on the coax.

: and then, but it's not generally fatal. I sure as hell wouldn't want
: 240v on my hair dryer, toaster, small power tools, etc.

You learn to live with it. Here in Scotland (240v 50Hz, Neutral at
ground potential) the population has lived with it for long enough for
everyone to know to be very careful. Standards of equipment and wiring
are somewhat tougher than in the US. Electrocution at 240v is a pretty
uncommon event. I've had the occasional nasty surprise, but not many.
Most cases I've heard of in the past while has been fools climbing
11kV 33kV etc power poles and EHV pylons or touching them with
conducting things.

It is usual for professional portable power tools to be powered via a
safety transformer giving 110v output, centre-tap grounded.

To someone used to our gross-overkill standards (could I have chosen
a better adjective?) a lot of US electrical fittings look frightening.

I shaved off 240v this morning,
David GM4ZNX

Same here. Have owned mine for 2 years and it does come on when I hit the PTT. Doesn't bother me though. Considering that I can rag chew on occasions, better to have the fan attempt to keep things cool early on rather than try to compensate when it's too late. At least I know it's working when I key up cold. If it didn't, I'd worry then...

I had the honors of being in the trail vehicle the last 2 years, not including this year. We indeed used tacticals calls but also signed with our calls at the end of our conversation with net control. Net control also ID'd every ten minutes with station call and brief description of event to let all those monitoring that it was a closed net. So when we started communications we did use "Trail" to "NET" but ended as "Trail Out, KD2PM" when we signed each time.

Perhaps new net control personnel have different ways of running things. They should have followed rules from the past.

You made appeals to tradition, I just reread all your posts on the
system here, and that much was plain. Now *I* said that boils down
to "I had to do it, so should you" as my interpretation of what
tradition means in this context. If you disagree with that, fine,
we can discuss that. If it appeared that I was quoting you, I
wasn't, the quote marks were to highlight a common idea that's
floated about here for several years in this discussion.

>comment to me.

I have? I just went back and reviewed every exchange we've had on
the amateur groups about this topic, I didn't see where I commented
that you addressed the issues. The only issues I see that you've
addressed are the value of tradition and effort (of any kind) to
pass the amateur exams. I think this completely misses the point
of government licensing requirements.

The only point where I see we've agreed was on the destructive
effect some postal card gamers are having on amateur radio, but
that was in a separate thread, and you didn't really agree with
that idea either. You totally ignored the qualifiers I used, and
attempted to claim I saw things only in black or white while you,
of course, saw all the shades of grey.

>: I welcome *rational* debate, but all that seems to be forthcoming from

>been saying.

I just reviewed the thread, where's the issue you've been bringing up
that I haven't addressed? I see nothing in your posts that isn't directed
at the ideas of tradition and effort for effort's sake. Note that it's
even a question in the licensing question pool as to whether preserving
the past is a goal of amateur radio. The correct answer is no. Now if you've
slipped something of substance in your replies to me that I've missed, remind
me and I'll certainly address it. (I have allowed others' answers to your
statements to stand when I thought that anything I would add would be
redundant. I can avoid that tendency if you like.)

I agree if you just fold you throw away your rights. Often these
"Security Guards" are just frustrated they were born 50 years too late
to wear black armbands and give raised arm salutes. Call the director
of the Museum and ask what rule you were violating.
I must confess I often take the stealth approach with an ear bud speaker
and a midget mike. A fight with two guards is not the right approach but
expressing your concerns to the director is. If the director doesn't
respond you might show up at a Museum Board meeting and try
you luck there.

Do you have any *reasons* why you think the HF bands would be destroyed?
Somehow I expect the EM spectrum is tougher than you think. If it can
tolerate a DX pileup, it can certainly withstand having some amateurs
who haven't passed a formal Morse speed test operate there. Do you have
any reason to think that they would be any more impolite than existing
code tested amateurs?

2859. DXbase

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-21 18:51:59 UTC
From: w8zf@atl1.america.net
Message-ID: <3aqq8f$371@peach.america.net>
Source record: 256406

This letter is precipitated by several e-mail exchanges I have observed on Internet. Mike Wood, NT4O, has embarked on a crusade to slam DXbase. I have listened quietly for some time, biting my tongue, as Mike Wood tried to convince people that THEY had his problem, too! Recently, his unfair vituperation became too much to bear in silence.

First of all, I apologize to our users for my e-mail to Mike. I fully expected him to post my response. I don't apologize to Mike because I meant what I said and it was true. Rather, I am disappointed in myself for allowing his constant goading to initiate my unprofessional response. Mike Wood, NT4O, would have Internet readers believe that he is the victim of an uncooperative, indifferent, merciless, mega-dollar software juggernaut. Hardly. We're just two guys, working hard for 50 cents an hour , doing something we love.

We log our trouble calls. Over 87% of our users never have a reason to contact us -- they just install the program and blissfully enjoy it, day-after-day, year-after-year. Of the ones who do call, virtually all have their problem resolved. Our unresolved problem rate runs just under 1% of our total users. These are people who have some sort of serial port problem, crashing problem and who, for unknown reasons, cannot get the software to run properly on their machines. NONE of these people (NT4O is a prime example) has chosen to return the software. Instead they, like NT4O, upgrade to the new version. My point is that the overwhelming majority of our users are very satisfied with our product. Mike (and a few others with unresolved problems) are about 1% of our customers, yet Mike generates 80% of the negative traffic about DXbase! Misery loves company and Mike would like to convince others that they are as miserable as he is.

I would like to point out that Mike has responded to just about every inquiry about DXbase on Internet, using his "answer" as a soapbox to denigrate our product. There is no doubt that Mike has a problem with DXbase. Out of thousands of happy DXbase users, we regretfully accept that there will be some people we just can't completely satisfy. However, I can honestly say that in six years of sales, I can count the number of dissatisfied users (enough to return the program for a refund) on one hand. How many other software publishers can make such a claim?

Mike's claim that he has "been unable to establish a dialogue" with us is unfounded. We haven't heard from him in more than a year,

other than to return calls we made to him to verify he had received our update disk. NT4O says he "had to resort to other forums to attempt to find remedies." He clearly is not seeking remedies -- he is venting his displeasure in a medium where he provides reading entertainment at our expense. Unfortunately, the time we spend trying to defend ourselves from this one vindictive customer is subtracted from useful pursuits, like answering support calls, shipping updates, adding user-requested features. He is wasting YOUR time as well as ours.

In our newest release, V4.0, we unfortunately made a misguided attempt to limit piracy of our program which resulted in a problem with packet and lockups. It was fixed (V4.0a) within about ten days. The fix was to eliminate the added code and return to the serial communications exactly as they were in version 3. The bug only effects users with certain TNC's at some baud rates, so not everyone needs to update. I have left complete application notes on our BBS and on Hamnet on CompuServe describing the problem , how to contact us and what we will do to rectify it. I have apologized for the inconvenience this has caused and have responded to every request for an update.

When we have a bug, we are honest and admit it. We are above-the-board about it, and we fix it. We remain unconvinced that there are any errors in the serial port programming. Of the 13% of our customers who DO call us, about 10% are about serial problems. Of these, TSR's, interrupt and address conflicts have generally proven to be the culprit. As mentioned before, less than 1% remain unresolved. I recently had a problem myself with serial communications (not involving DXbase) and after pulling my hair out for two weeks, I discovered that my ATI Wonder Plus SVGA card used the standard COM3 address for its video I/O! I had blamed everything from Windows to QEMM but was unable to solve the problem until I found the hardware conflict. The reason for communications problems while using DXbase may be difficult to find, but there usually is a TSR or hardware conflict at fault.

We have two support lines, a telephone BBS, and two CompuServe accounts. The numbers are published in the documentation that comes with DXbase. Those who have contacted us for assistance have had much better results than those who spend their time disparaging us on the Ham forums. If we are not readily available, please leave us a message either on e-mail or voice mail and we will do everything we can to support you.

73, Dean W8ZF

At the Cleveland Museum of Art a few years ago, my brother, KM8Z and I
were asked to check our HT when a guard saw us transmitting on simplex.
They said it would interfere with the security systems. Perhaps this
amounted to making *them* jumpy. In any case, they were polite, as
were we.

2863. Range of 10meters at night?

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-21 20:16:50 UTC
From: anderson@ncrsun1.ncr.usace.army.mil
Message-ID: <Pine.3.89.9411211429.A6623-0100000@ncrsun1>
Source record: 256414

I got wondering the other day about the range of 10 meters
in the middle of the night. Are we talking line of sight?
I would think a ground-wave component would be there, so
actually further than LOS should be normal.

I would think 10m could be available for a state-wide
or some sized area local net, much like 80m seems to be
used during the daytime for MARS, etc.

Any thoughts? A fun/neat test would be to take two identical
mobile setups, and start somewhere and drive opposite directions
on a freeway, staying in constant contact, reading off mile markers,
(and talking about things) until loss of transmission occurs.

It would be a way to keep those 10m sets warm until the next
cycle becomes favorable. Maybe people are already doing
this, although I don't hear about it.

Just pondering.... 73 de Kevin, KB9IUA

I really don't think a bigger dish is that helpful in this case. The
rain fades I talked about even hit our 8 meter Ku systems. I'm not
talking about a few db here, rain fades at Ku represent *serious*
losses. Pretty much you just wait until the cell moves on. OTOH,
a light general rain typically isn't a problem, even for the small
dishes.

If I were in the market for a DBS system, I'd just buy what they're
offering off the shelf. It's a well integrated system, and trying
to retrofit it to a larger TVRO dish would probably be more trouble
than it's worth. Just accept the fact that occasionally you're going
to get rained out.

Subject: Battery acid

Alkaline batteries have *no* acid. I had some alkalines that leaked
all over inside some test equipment. I use vinegar slightly diluted
with water to remove the residue. A substitute would be acetic acid
(28%) reduced to 6% to make it about the same strength as household
vinegar. Lead *acid* batteries can be cleaned with a mixture if
baking soda and water. I use distilled water to be sure I`m not
contaminating with other minerals etc. when cleaning battery
accidents inside my equipment.

Subject: DXBASE Problem Resolution

In regard to DXBASE complaints, namely:

"... DXbase program's reliability of the RS232 link for HF radio
control. I have had this problem for two years ."

I have the following workaround:

Follow the #1 rule of software engineering. "Don't do that!"

Come on, stop whining! If the field is not populated properly,
then simply enter the frequency manually, or back out of the
contact and re-enter the call-sign, again. I've had this happen
more than once. Granted its a problem. Come now, do you have
to get into this mental rut and ruminate about one shortcoming
for TWO YEARS?

I've found that the little black box between the computer
and the rig has an awful lot to do with these errors/problems.

Its a matter of buffering.

In all fairness to all concerned: A computer is not a miracle
machine that performs flawlessly EVERY TIME, and for ALWAYS!
The sooner you accept that fact, the happier an end-user you
will be.

As for the developer, I think Dean and his partner need to work
on their help-desk procedures, institute some form of software
configuration control system, if not already installed, and be
helpful and enthusiastic about BUGS as much as you are about
the NEW bells-and-whistles they may be currently working on.
Software development is 25% fun and glory, 25% ho-hum, and
50% headaches. Actually, the ratio tends to vascilate from
time to time.

: occurs, you have to do something really stupid like knock a radio into
: the bathtub while you're in it, to end up dead. You may get "bit" now
: and then, but it's not generally fatal. I sure as hell wouldn't want
: 240v on my hair dryer, toaster, small power tools, etc.

You learn to live with it. Here in Scotland (240v 50Hz, Neutral at ground potential) the population has lived with it for long enough for everyone to know to be very careful. Standards of equipment and wiring are somewhat tougher than in the US. Electrocution at 240v is a pretty uncommon event. I've had the occasional nasty surprise, but not many. Most cases I've heard of in the past while has been fools climbing 11kV 33kV etc power poles and EHV pylons or touching them with conducting things.

It is usual for professional portable power tools to be powered via a safety transformer giving 110v output, centre-tap grounded.

To someone used to our gross-overkill standards (could I have chosen a better adjective?) a lot of US electrical fittings look frightening.

I shaved off 240v this morning,
David GM4ZNX

>
>What impact does weather have on such a system. I've heeard that
>signals >10Ghz experience substantial signal attenuation in
>rain.

Ku band signals do suffer from rain fade more than C band signals, or VHF/UHF terrestrial signals. It doesn't even have to be raining at your house for this to occur. All that's required is a heavy rain squall in the beam path, which could be occurring miles to your South.

There's another factor to consider as well. Due to agreements with the program providers, you'll get no network signals in areas where there is a local broadcast provider. This means that if you want to watch your local news, or get timely warnings of emergency situations such as tornados, hazardous chemical spills, or the like, then you will still have to have

an off the air antenna or a cable connection.

Also, oddly enough, your local cable system will still make
money off of you if you go to the DBS system. Their contracts
with the program providers require that they get a portion of
the revenue passed to the program providers by the DBS service
since the cable franchises have exclusive distribution rights
in their territories. Hence, you watch HBO, you pay the local
cable whether you know it or not.

Still, it's a neat technology, and for rural subscribers it's
the best game in town. Picture quality is often better than
that delivered by cable even in areas served by cable. As an
addition to an off air terrestrial broadcasting antenna, it's
a winner.

Subject: Ohio/Penn DX Bulletin #183

SB DX @ ALLBBS $OPDX.183
Ohio/Penn DX Bulletin No. 183

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 183
BID: $OPDX.183
November 21, 1994
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX
Association, Ohio/Penn PacketCluster Network, AC1O, AD1C, K2WR, WB4DBB,
WB4IUX, K4CEF & the Southeastern Cluster Group, KF8VW, NW8F, K9AJ, F6AJA,
SM5MX, JE2ERH and JH2PDS/1 for the following DX information.

3V, TUNISIA. A Japanese leading DX magazine, "The 59 magazine", reports
that four JA operators (JH2CFD, JF2EZA, JR2RVL and JL2OYI) are in Tunis
to instruct the locals on amateur radio operations, plus to setup a club
station. The club station has been reported to have a 15m monobander, a
tribander and will have some dipoles for low bands. The station will be
running a FT-726 barefoot. The club callsign will be 3V8BB. The club
station first appeared on the air November 19th at 0700z, on 20 meters
SSB. Most of the activities seem to be mainly around 14025 and 14195 kHz.

The JA instructors are to end the testing on the 20th, but nothing was mentioned what would happen after this day. QSL via JF2EZA.

9N, NEPAL. Willi, OE7KWT, is now active as 9N1WT and is using 9N1KY's station. He mainly uses 21270 and 14270 kHz around 0800z, but has been heard on the 14226 DX net around 1145z. QSL via OE7KWT.

A22MN QSLS. KEN, WA8JOC, has had a computer crash and all the logs for A22MN has been lost. Expect a several month delay on QSL returns. Bureau cards will be answered but they will be last. Ken said it would be March/April 1995 before he gets caught up.

BV, TAIWAN (Just a reminder). Tom, WB4IUX, has received final approval for his trip to BV and now has a firm schedule. He will arrive in BV on November 28th. He will operate for 4 days. He says to look for him on the 29th, 30th, and December 1st and 2nd at East Coast sunrise between 3508-3512 and 7008-7012 kHz.

THE GOLIST CONTINUES (but under new reins)! Jay and Jan O'Brien (W6GO & K6HHD) of the "The W6GO/K6HHD QSL Manager List" have decided to retire. For the last 15 years both have been processing and collecting QSL routes, making it available for DXers throughout the world. Also, they have made it easier and quicker for a DXers, Contesters and the PacketCluster communities to find a QSL route. A special thanks goes out to Jay and Jan for their many years of dedication to this great service (from OPDX and the Ohio/Penn Network). Jay has announced that Paul and Nancy Smith, (N4FFO & KB4RGW), will be taking over the QSL Manager List ("GOLIST") including DX-BBS and the PacketCluster SYSOP interface (SH/QSL and SH/GO).

GJ, JERSEY. Rich, K2WR, will once again be active from the Channel Islands for the CQWW CW Contest. He reports that his operation will likely be low power with activity on 160, 80, and 40 meters only and using the callsign GJ/K2WR (or possibly GJ0/K2WR). QSL via K2WR. PLEASE NOTE: Rich mentions while ALL his GJ/K2WR operations go to K2WR, his May 1994 40 meter WPX operation as GH3DVC gets QSLed to GJ3DVC or the GJ bureau.

HZ, SAUDI ARABIA. HZ1AB will be active in the CQWW CW Contest as a Multi/Single entry. The operators will be Terry/N4KT, Bengt/SM0CCE and Thomas/SM0CXU.

J7, DOMINICA. Paul, K1XM, is heading up a Multi/Multi operation for the CQWW CW Contest using the callsign J77J. The operators will be Paul/K1XM, Charlotte/KQ1F, John/K4BAI, Walt/AC1O, Bill/G4WJS and Bruce/G4WVX. There will be some CW, SSB and WARC band activity outside the contest. J77J QSLs (which will be another stunning K1XM/KQ1F photo card) go to K1XM; all others to the individual operators' home calls. SPECIAL OPERATING NOTES: They will make a special effort to work Europe on 80 and 160 meters (antennas will be 150'-200' above sea level with a straight ocean shot to EU); also on 10 meters, propagation willing. They will try their best (if they get an opening!) to work Japan, but it will be tough on those bands with their antennas (there's a small hill between them and JA).

Check their sunrise at 1017z and their sunset 2129z.

TO, MARTINIQUE. F6AOI, F6BFH and F9IE who were recently active from J8-land will now be active from Martinique (FM) as TO0P until November 27th. The JA group will operating 15-40 meters, CW, SSB and on the WARC bands. QSL via F6BFH.

XV, VIETNAM. Rolf, SM5MX (also 4S7MX and 5Z4MX) is now active from Hanoi signing XV7SW. Rolf has announced the following information: "New legislation on amateur radio in the form it is known in other ITU countries is expected to be passed in Vietnam in 1995. Pending this, I have been granted a license to operate as XV7SW on certain fixed frequencies. Here are my CW frequencies: 28016, 28019, 21016, 21019, 14016, 14021, 7033 and 3505 kHz. There is no QSL service in Vietnam. I have got the DXbase log software and intend to handle incoming cards myself to start with, as the mail service seems OK. I plan to print cards in December. Here is my address: Rolf T. Salme, Embassy of Sweden, Box 9, Hanoi, Vietnam." Reports from the Southeastern Cluster Group (SCG), indicate that several of the users worked Rolf on 14016 kHz around 2300z. The SCG also report that Rolf is making plans to be active in the CQWW CW Contest on 3505 kHz, but running barefoot and low antennas.

ZL8, KERMADEC ISLAND. It was reported on the 14226 DX Net that Barry, G4MFW (and he is also licensed as ZS1FJ), plans to operate from Kermadec Island for a couple of weeks, starting in March (1st, 13th or 14th). It was also stated that he has the license and that he will have a stateside QSL Manager. There was no mention of bands/modes to be used, or how many operators will be going.

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

>possibly actually persuade others to agree with me (or the other side if
>their arguments are good enough). So far, you seem to be one of the
>biggest apponents to a rational debate.

Please reread what you quoted above (and the rest of the message from
which it came as well). No screaming, just a series of reasons why Morse
testing is irrelevant to the service. Now, reread Gregory's posts, or
postings from his cohorts. Do you find *any* reasoned argument at all?
Greg, and most of his cohorts, offer nothing but appeals to authority,
IE the ITU requires it, which is no argument at all because that's what
we're attempting to change, and appeals to tradition which boil down to
"I had to do it, so should you". Blind obedience to tradition is not a
purpose of the service, and amounts to nothing less than hazing.

I welcome *rational* debate, but all that seems to be forthcoming from
the other side is emotion. There should be a good solid reason for
the *government* to require a particular test element. In the case of
Morse testing, the only reason the FCC has given is "because the
amateur community (ARRL) wants it". Now the FCC's charter comes from
the Communications Act of 1934, and that charter doesn't allow the
FCC to be responsive only to the whims of existing licensees. It charges
the Commission with acting in the *public* interest. So the challenge
to testing proponents is to show how the public interest is promoted

by continued pass/fail testing of manual Morse as a gateway to other amateur operating modes and frequencies. IMHO, a reason such as, "I want the government to keep acting as a forced recruiter for my favorite mode so I'll have someone to play with" is not a sufficient reason.

From: treit@seanet.com
Message-ID: <treit.14.0015A934@seanet.com>
Source record: 256345

Amid all the Pro-Code / Anti-Code bickering, it is important to step back and examine the purpose of testing at all.

I am 100% biased in favor of a code exam. At 18 years old, I have been a licensed ham for two years. I work primarily CW, as it is a fun, efficient and exciting mode. I have passed my 20 WPM, and I am baffled at those who view this as a severe obstacle. I am terrible at math, have a lousy memory and have a very hard time learning electronic theory. I am, however, working my tail off to learn enough to upgrade to Advanced and Extra. I am taking an electronics class that requires vigilant attendance and constant practice to learn the concepts. The code is no different. The MAJOR point of these exams is to insure that those who utilize the airwaves are dedicated people who are willing to go out of their way to put time and hard work into getting licensed. The knowlege required, though often relevant to operating a ham station, is by no means vital to that operation. I could, for example, go the rest of my ham career without understanding Capacitive Reactance and Phase Angle. In fact, I have spent hour trying to figure out the latter from the Advanced Class manual. Do I want these elements removed from the exam: absolutely not.

There must be a realization that the government has the ability to remove our HF privileges if we do not demonstrate a powerful and convincing reason that we should be allowed to keep them. By showing our dedication through passing exams, we prove that we are interested enough and willing enough to learn and utilize skills and knowlege that your average person would not.

2874. Re: tv antenna useful for fm radio?

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-21 22:16:06 UTC
From: n9315@pnet16.navy.mil
Message-ID: <Czn1uv.42D@nctams1.uucp>
Source record: 256408
Cross-posted to: rec.radio.amateur.misc,alt.home.repair,misc.consumers.house

Yes your VHF section of you TV antenna will work quite well for your FM band radio. In fact, if you have an analog receiver you can tune in the audio carrier for channel 6, if there's one in your area. You just tune toward the bottom of the FM band (ie, below 88 MHz).

As for your cable, this might have the FM band on it as well, ask your cable company. If it's available, get a splitter and run a cable to the antenna input of your stereo. You don't have to worry about finding something else there, but most systems do add a signal at about 108 Mhz that is a digital data stream, for controlling features in cable boxes.

As a side note, channels 2 thru 13 are on the same frequencies for both cable and broadcast. On cable, channels 14 thru 22 "sit" between channels 6 & 7, which in the airwaves contains many signals, such as aviation, government, ham, public service, and business. Then, with cable, channels 23 and up reside just above where channel 13 is in the spectrum.

In unceasing articles people continue the code vs no-code arguments. I've been watching this for months, without seeing any likely end to the polarization of attitudes, or much willingness by the extremists to compromise.

I passed the code test at 5 wpm, and now am preparing to pass the 13 wpm test (and, after that, possibly the 20 wpm). I do that because I have no choice, if I am to be licensed do what I want to do, such as HF SSB. I do not do it for the sake of learning "code", because I don't care a damn about sending or receiving morse code.

Possibly someday morse code transmission someday will appeal to me too, but that seems very unlikely at this time.

My conclusion is that after the bs is stripped from most of the "pro-code" arguments, the most common reason many hams want the code requirement retained is to discourage newcomers, to reduce the number of people with whom they might need to share the bands. If in fact they were right, that requiring code would prevent the vandals from destroying ham civilization, then I'd agree. However, it's clear that there are undesirables within the ranks of the licensed, people that "code" requirements did not filter them out. And I doubt that the code requirement prevents many good people from passing the tests, even though they (rightly or wrongly) regard the "code" as an aggravating anachronism.

Greetings! Decided to do the Sweepstakes phone contest even though I only have 10m phone access (tech plus, you know). I was using my TS-520 at around 75W into an inverted V hanging out on my balcony (2nd floor). I only managed 64 contacts and 20 multipliers for 2560 points...I was really hoping for 100 contacts, but that's life. On the up side, I did manage a 2-way qso with Yokahama, Japan, Kwajaline (sp?) Island (part of the Marshalls), Chile and Venezuala. I heard Paraguay but couldn't make myself heard...

All in all, I rather enjoyed the event except for the numb bum.

: : This may or may not be a very annoying question for you all, but
: : i was just curious of the typical range that one would have with a
: : tech. no code lcense? If i got it, it would probably be just to talk to
: : my dad, who is approximately 250 miles away (across some pretty flat terrain,
: : if that matters).

: The tech license give you priviledges above 50MHZ. Typically, you
: won't be able to maintain reliable direct communications with another
: station that distant, with rare exceptions. Your mileage may vary. :-)
:
Actually, if you compare the path loss graphs for tropospheric scatter
and EME work, you find that the loss is roughly 50 dB less at 250 miles.

Thus, working 250 miles is real easy between EME class stations. You
could probably even work FM, if your amplifiers could take the duty
cycle. SSB would reduce the power/antennas needed. Tropospheric
scatter is pretty reliable--K1FO reported 230 consecutive schedules
kept with W8YIO over a 580 mile path.

EME refers to Earth Moon Earth--bouncing a signal off the moon.
It was once considered a difficult feat, but technology has improved
to the point where an appliance operator with enough money could
own and operate one.

Similar thing happened to me when I visited the Kennedy Museum in the old School book depository building. The sign said no cameras or recorders and it didn't make a difference to them that I had the FCC license with me (actually a copy) to prove it. Funny thing was that binoculars were ok....

The thing was that I was hesitant to leave my $350 HT with some of those clowns. Why was the HT a threat to them?

[ANARTS - Australian National Amateur Radio Teletype Society]

ANARTS News Bulletin 836 20th November 1994

A get-well soon to Jim ZL1KN

We have heard that Jim ZL1KN has had a couple of weeks in hospital with pneumonia and is just starting to take a few steps.

I am sure that all RTTY users and listeners wish Jim all the best for a speedy recovery ... get back on the airwaves soon Jim, and our relay officer hopes to hear you on the callbacks.

73 from all of us here at ANARTS.

The next ANARTS meeting will be held on Friday 2nd December at the QTH of Keith VK2ZZO in Lane Cove. The meeting will commence at 7.30 pm and will end with tea or coffee and biscuits. For further information contact Jim VK2BQS or Col VK2CTD at their QTH, or phone Pat VK2JPA at work on (02) 230 3722.

Hope to see you there.

Next week ...

Rules for the TARA RTTY Sprint contest coming up on 10th-11th December will be published here. Keep watching.

P.S. For Sydney amateurs, the WIA has the new callbooks (1995) for eleven db each for WIA members, twelve fifty db otherwise.

IPS WEEKLY REPORT
---

11 NOVEMBER - 17 NOVEMBER

ISSUE No 46

DATE OF ISSUE: 18 NOVEMBER 1994

INDICES:

DATE 11 12 13 14 15 16 17

10CM 79 80 81 79 79 79 79
A 6 4 6 8 9 3 (4 ESTIMATED)
T 35 28 54 33 45 45 31

SOLAR ACTIVITY WAS VERY LOW 11TH-12TH, AND 14TH-17TH NOVEMBER AND LOW ON 13TH.

THE GEOMAGNETIC FIELD AT LEARMONTH (WA) WAS QUIET THROUGHOUT THE PERIOD EXCEPT FOR 15TH NOVEMBER WHEN THE FIELD WAS QUIET TO UNSETTLED.

IONOSPHERIC F2 CRITICAL FREQUENCIES RANGED FROM SLIGHTLY ABOVE PREDICTED MONTHLY VALUES TO 15 PER CENT ABOVE. SPORADIC E MAY HAVE CAUSED DEGRADATIONS ON 12TH-13TH, 15TH AND 17TH NOVEMBER. SPREAD F WAS ALSO OBSERVED DURING LOCAL NIGHT ON 17TH.

FORECAST (18 - 24 NOVEMBER)

SOLAR: VERY LOW.

GEOMAGNETIC: QUIET TO UNSETTLED, POSSIBLE ACTIVE PERIODS ON 20TH AND 24TH NOVEMBER.

IONOSPHERIC: NEAR PREDICTED MONTHLY VALUES.

ARLD066 DX news

Thanks to Bob, WB2CJL, Gary, NI6T, Bob, W5KNE, QRZ DX, Chod, VP2ML, The DX Bulletin, Gary, K8BN, Don, WB2DND, Tedd, KB8NW, the Ohio/Penn DX Bulletin, the Yankee Clipper Contest Club PacketCluster network and the Contest Corral column from the pages of QST. Thanks.

SYRIA. A eight member team will activate YK0A November 23 to 30. Omar, YK1AO, arranged issuance of the license and secured an operating site inside a Syrian PTT training facility on the outskirts of Damascus. The primary objective is to make YK available on CW, RTTY and the low bands. Secondary to that is to operate a two or three transmitter Multi/Multi in the CQWW CW Contest. Some SSB and WARC band operating is possible. QSL via W6OAT

CHAGOS ISLANDS ON 160 METERS. VQ9SS and VQ9QM should soon be active again on this band. VQ9SS plans to be in both the CQWW CW Contest and the ARRL 160 Meter Contest.

TONGA. Paul, KK6H, will sign A35RK from November 24 to some-time early in February. He will operate mostly 160 through 30 meter CW. Plans are to be active in the ARRL 160 Meter contest and CQ World Wide DX CW on 160 meters. QSL via KK6H or the W6 bureau.

ANTARCTICA. Nigel, VP8CMR, has been worked on 14260 kHz after 2230z. Plans are to be active on 17 meters from 1500 to 1900z. He will be at the base until February 1995. QSL to Nigel, Halley Base, BAS, Via Port Stanley, Falkland Islands.

TAIWAN. Tom, WB4IUX, has permission to sign BV/WB4IUX. He should be on the air in late November or early December, with plans to operate 80 and 40 meter CW almost exclusively. He may get on 20 meter SSB to spread the word that he is up and running, and to provide his operating schedule.

ZAMBIA. Ely, IN3VZE, will be active as 9J2CE until November 20. Listen for his SSB on 20 and 40 meters. QSL via IN3VZE.

MARIANA ISLANDS. A group will sign KH0AM during the CQ WW CW Contest. Some activity will take place before the contest on the WARC bands and some RTTY. QSL via JE1CKA, Tack Kumagai, PO Box 22, Mitaka, Tokyo 181, Japan.

JAMAICA. Walter DJ6QT is now signing DJ6QT/6Y5 until December 1. Look for his print in the WAE RTTY contest using the call 6Y5X. QSL via his home call.

CARIBBEAN DXPEDITION. Dieter, DL3KDV, will be active from J6, J8 and J7 starting sometime this month. Listen for him in the CQWW CW contest. Dieter prefers QSL cards via the bureau.

VIRGIN ISLANDS. Listen for N9RJ/KP2, operated by N9RJ, N9KZJ, WB9CEP and W2CGI, from November 12 to 20. Plans are to be on 80, 40, 20, 17, 15, 10 and 6 meters. QSL via WB9CEP.

MARTINIQUE. F6AOI, F6BFH and F9IE will be on all bands with CW and SSB from November 11 to 27. They will sign FM/ their home calls.

ARUBA. Jeff, KR0Y, will sign P40F from Aruba November 21 to 29 including an effort in the CQWW CW Cont%st.

GAMBIA. C56/G0MRF is not listed in 1994 Callbook. Direct QSLing is via G8PDW, or bureau cards may go addressed to G0MRF.

Coming events

December 2nd ANARTS meeting

10th-1th TARA RTTY Sprint
2100z Sat.-0100z Sun.

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by packet to the President (Col) VK2CTD, or the Secretary (Pat) VK2JPA at VK2RWI.

News items may be sent to Broadcast Officer PO Box 60 Blacktown 2148 Australia, or by packet to VK2JPA at VK2RWI. Email addresses for the Broadcast Officer are : patl(at)pitt.conmusic.su.oz.au
The Society welcomes news items on any digital subjects from anywhere in the broadcast coverage area. We are looking for- ward to news from your areas to let other amateurs know what you are doing in the hobby. Hope to hear from you.

73s de Pat VK2JPA Broadcast Officer
That concludes the broadcast for this morning/evening.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
21 Nov 28 15% depressed 00-01UT, blanketed by Sporadic E
02-04UT and 09UT, near predicted monthly values
10-18UT and 15-30% enhanced thereafter. Daylight
depressions of 30% were noted at Townsville. No
data was available for either location 05-08UT.

Predicted Monthly T-index for November: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
22 Nov 30 Mostly near predicted monthly values, with occasional
enhancements of 15-30%.
23 Nov 30 As for 22 Nov.
24 Nov 30 As for 22 Nov.
COMMENT: Sporadic E layer was regularly observed yesterday at low and
mid lats and is expected again today. Night-time Spread F was noted
at mid lats. Propagation conditions appeared fair to normal at low and
mid lats and are expected to remain so today.

Silent key -- VK2BAW

Obituary

Wilf Murrel, VK2BAW, was a well-known Hillston resident. He was born in June 1914, spent his childhood and education years at Henty. From the time he left school Wilf joined his brothers in a venture to operate the Culcairn Power Station, and in 1939 he bought his own first power station at Walla Walla.

During the course of the war he married Elsie Haines in March 1940 and their daughter Lynette was born in Walgett in 1947.

With the breakout of Second World War, Wilf joined the RAAF in 1941, and after his training in Australia was transferred to Canada where he completed his Advanced Flight Training, passing with high distinction, such that he became a flight instructor and a fine pilot whose contribution during the war was a considerable effort in the training of fighter and bomber pilots. On discharge after the war he left with the rank of Flight Lieutenant.

He returned to power station operation and bought the plant at Collarenebri where he spent the next few years before moving to Hillston where he bought the Hillston Power House.

Wilf never lost his love for flying and the older people in that district will well remember his flying exploits with small aircraft and landing groceries and medical supplies and mail during the '56 floods, many properties being completely isolated at that stage. He flew many emergency missions taking to Hillston and other medical centres, or flying doctors out to attend accidents on the various properties in the district. He kept up with his flying expertise by instructing at Griffith and Sydney flying clubs.

Other parts of Wilf's extensive career was as a Shire Councillor where being a man with progressive ideas he was able to give very expert advice.

He also competed in the Redex trials together with Eric Roberson in air races and Alan Taylor in the road trials. Time and again Hillston came up as the home base of the winners. The headlines in the '50s and '60s newspapers refer to - the bushies from the out-back who done it again and won the event.

Wilf was responsible for many inventions, dozens literally, his water purifier was a typical example of the talent that he had.

Wilf was also a good piano player, provided many of his friends with enjoyable evenings around his grand piano. This was valued greatly because this was in the days before TV and this was the only form of entertainment available to country people.

He was also known for his ability as a rifle and pistol shot, won many events during his younger years and was always ready with advice and repairs for the younger ones. He was in the 1937 King's Shoot championships in Sydney which was quite an achievement. He would have been outright winner if it were not for a sudden illness which affected him on the very last day of the event.

He was also an expert photographer and a ham radio enthusiast with friends all over the world who regularly contacted him and provided the international information he needed to stimulate his mind.

Wilfred Murrel was also a sawmiller here in Hillston and a garage proprietor in the premises presently occupied by the Hillston Rescue Squad and later in his life, a farmer on his property Wilga Farm. He spent a few years in Sydney during the 70s when he engaged in contract management of buildings.

Wilf passed away at his home on Wilga Farm after a short illness in the early hours of Friday 22nd July. He was in the company of his wife, his daughter, his granddaughter and his nurse at the time. His remains have been interred at Henty.

Vale Wilf Anthony Murrell VK2BAW

VK2 DIV. PRESIDENT'S MESSAGE

This is Michael Corbin VK2PFQ.

Well we have a wish list again this week....Perhaps this time I have to sell the concept a little harder ....Well, here goes....As I requested last week we are in need of someone to help Peter Kloppenberg VK2CPK, our current "freeby" secretary, on a casual basis of course, to get the office back up to date. Filing is our concern. I will explain our dilemma once again and in terms, I hope, which will tug at the very strings of your hearts. Hopefully, galvanising someone out there into action.

The question is, really.....What do you expect for your membership fees? Well lets examine what you get now for your money. Apart from the obvious AR Magazine, you get free access to the QSL Bureau....You have at your disposal a library which has the latest magazines, as well as many books on various topics. If you can't make it to the office, we will research the matter and answers are forwarded to you for a small fee. Technical Books are sold in our Parramatta Office at a reduced cost. If you want to come to the

office to research your own subject or just to have a chat and a cup of Coffee, then you can. We even "give you" a biscuit. We have a radio station which can be operated by arrangement; a meeting room which is available to affiliated clubs, again by arrangement. A Transmission Station at Dural which provides you with this weekly broadcast, repeater facilities on various frequencies, and Beacons as a service to the world wide amateur fraternity. These facilities are open for inspection most weekends and you are always welcome to drop in on any Sunday.

The question that you should now consider is... what do other Divisions give their members for the same sort of money and soon, in some States, NOT ours, for more money?....Answer..... almost none of the above! Now that brings us to the real crux of our problem.... What do YOU expect from the Office. If it's information, well, someone has to be there to give it to you. This costs both time and money. The money side of it is pretty straight forward.... the cost is in the wages of the staff which either provide you with the answer you require or takes a message and passes it on to the relevant person, who in turn gives you the information. The time side is the other part of the equation. If questions are to be answered and/ or information sourced and supplied, this takes time. When we call the office, most of us like to have a bit of a chat. I don't discourage this, as it is part of the hobby, indeed it's a prerequisite. But..... When you chat, something must suffer and unfortunately that is where the problem lies. So, perhaps the way you might be able to help, if your not much good at filing, is to just sit there and answer the telephone. You know, we could probably look into diverting the telephone to your 'phone number and that way you need not even leave the comfort of your own home. You had better tell the XYL.

While Peter Kloppenberg continues to do a sterling UNPAID job in the office, he cannot do two things at once. It is to this end that we are requesting some help from you out there in Ham Radio land. Aub Topp and Max Bowie do a great job, but we need more like them. Aub Topp is supposed to come in only on Tuesday, but it's not uncommon to find him there more often than that. Max is our "Boy Friday". Max does things that the office staff should do, but don't have the time to do. Max spends from 5 to 6 hours in the office....that's a days work you and I as members don't have to pay for. The same goes for Aub Topp. His efforts bring the total up to 2 days we don't have to pay for. The question is, can you give us a similar amount of time or.....can you give us any time.....any amount would be appreciated.

If this is not your bag, what about a job as assistant librarian. Why? Aub needs assistance....quite apart from the fact that he has been doing the job...for years. What we should probably do is ask someone else to take over his job. Please Aub don't ask to be replaced yet. At present all information is recorded by

hand. What we need is to have this information on a database. If we had such a thing, then information could be provided to members, at the push of a button....Well who wants the jobs? Applications for either position need not be in writing. If you think you might fit the bill, give me a ring at home on 626 9288 ....anytime during daylight hours. I'm usually at some sort of a meeting most nights. Indeed, why not call me after the Broadcast.

This week I attended the Veterans meeting/come Christmas Party as Santa Claus, complete with an appropriate Red hat with the obligatory white pom pom on the top. (For those of you who have never met me, I have hair and a beard of the necessary colour to fill the bill adequately.) It was the first time I have been able to go to one of these meetings and I must say I enjoyed myself immensely. Any of you veterans out there, who have never attended one of these gatherings, is missing out I can tell you. If you think that the word veterans only applies to those who have been in the hobby for years, you're wrong. Veteran applies to those of us who have reached mature years. Hi! Hi!. The invitation is there for the next meeting and, yes, everyone is welcome. Oh, the next meeting is in February, the third Thursday....mark it on the calendar now... the third Thursday of February, that's February, 19th 1995.

This week the Institute was advised by the Executrix of the Estate of the Late Mr. Dennis Maxwell-Gill that the Institute had been left a quantity of books and equipment. This gentleman was not a Ham but had managed to accumulate an enormous amount of test gear the like of which I have never seen before. There is a least two truck loads of this gear. To this end don't, whatever you do, miss the Trash & Treasure sale next weekend at Amateur radio House Wigram St Parramatta....and as for the books....Dennis has bequeathed to the Institute what can only be described as a very comprehensive library of reference material. These will become available just as soon as they have been catalogued. It is indeed difficult to express our gratitude considering the magnitude of this bequest.

.....and now to the "Brickbats Department"...Those of you who listened last week will recall that the Broadcast was one of our longest for some time.....One hour and ten minutes to be precise. A listener even commented on the call backs that.... and I quote "Nobody could complain about the Broadcast as... there was something in it for everyone"...unquote. Well sorry Old Man, you were wrong...somebody WAS unhappy...It seems that I left something out of the Broadcast which it appears had to be announced for TWO weeks....It had it's first mention last week, then....Well, you guessed it....I left it out of the Script last week, and what's more I left it out ON PURPOSE...Yeah! That would be right. I'm like that...Did you know??!!??

Did I get a call after the morning Broadcast?...Of course not....
Did I get a call after the evening Broadcast?...again, of course
not!!...The person doing the call backs got a complaint. I
intervened and suggested that the individual concerned place
any complaints he might have about me in writing, to the
Broadcast Officer......Did that happen....NO!...The person
concerned got someone whose style is unmistakable to write....
You guessed it again....A Packet message......and all this
occurred even though I assured the person concerned, by telephone,
that the mistake was genuine.

I'll give YOU the facts and let YOU be the judge. Last weekend
was one full of Problems. The fax line was cut by the construction
team down the road from my premises for the SECOND week in a row.
The last time, which was the previous weekend, it was cut on
Saturday morning, fortunately it was fixed within four hours.
This time, the mishap occurred on Thursday...The service was
restored sometime on Saturday. Then, to make matters worse,
Richard Murnane's computer did a Backflip and kept sending his
eight pages of message to me....pages one and two only!.....
FIVE copies of each on each attempt, over and over again!!!!
A quarter of a roll of fax paper later, I ran out of fax paper.
....and you guessed it again....There was not a replacement roll
on the premises....and the local paper shop had closed. I contacted
Richard and asked him to fax the copy to Pat VK2JPA; rang Pat and
asked her to sit on the message 'till I got another roll of fax
paper; got down on my knees and prayed that not too many messages
would come in overnight and overload the memory of my fax machine.

In the morning, just as soon as the XYL got back from the
"tabernacle" (I'd left in the meantime for the same place).
She shot down to the shop; got another roll; wacked it the
machine and hoped for the best......and this clown thinks I had
the time to edit his confounded item out of the Broadcast!!!!
HUMPH!!! Well Sir, perhaps next time I just might enforce the
requirements for items submitted for Broadcast....TO THE LETTER.
No, come to think of it I'm not the type. BUT if I was.... I would
not have put it on in the first place. The rules are...and I was
TAUGHT them by YOU Sir are... In by THURSDAY, you insisted on this,
TYPED... That's TYPED, Double Spaced and.... should you require the
item to be repeated for more than one week...Then, an appropriate
amount of copies to be submitted. NOT...In late...Hand written...
only ONE copy...Not clearly marked that more than one Broadcast
was required by "highlite" pen or any other method. Come on mate.
Relax... After all...It's supposed to be a hobby.

I believe that by and large the Broadcast team does a pretty good
job.....Don't you listeners???? I'd be interested to know if you
did not agree....See you next........Hey, wait a minute. Something
else seems to have disappeared or.....has someone pinched it? No,
it was not left on the safe; it was not suitable for ATV, repeaters,
or other associated things. But, it has disappeared. What is it?

It was/is a TH3. It was borrowed (?).....OR...Am I correct? It was pinched! Who's got it?......Where will this ever end???

See you next week

Intruder watchers needed

This is a reminder that we need vigilance to protect our bands from the encroachment of stations who have bo right to put signals in our exclusively allotted frequencies.

Would you like to help watch for, or monitor, intruders on our bands? Intruder watch reports have been successful in getting intruders removed. For example, reports from volunteer observers of the Radio Society of Great Britain's Intruder Watch were instr-umental in having an interfering harmonic from Radio Rusii, a shortwave broadcaster located near Moscow, removed from the 20m band last year. (See WIA News in Amateur Radio, March 1994 issue).

The Federal Intruder Watch Coordinator, Gordon Loveday VK4KAL, is seeking more volunteers to help monitor the HF bands. In particular, Divisional Intruder Watch Coordinators are needed in VK2 and VK3.

But how do you recognise an intruder? Well, Gordon has a very instructive tape on the subject, packed with real-life examples. If you're interested in helping out, write to Gordon and include a blank C60 audio cassette.

1995 Call books

The 1995 Australian Call Book is now available, costing $12.50 for non-members, $11.25 for members, plus postage and packing.

This issue contains full information you need to fully enjoy ham radio. The information contains over 18,500 amateur stations, repeaters and beacons, band plans, DXCC countries list, accredited examiners, WIA Awards programme, SMA address and visitors' licensing information, and a few technical items where space per-mits.

1994 Callbooks

The '94 Call Book is still available, at a muchly reduced price ($5.00). This was as a result of over-ordering. You may remember, we had a very quick sellout on the '94 Call Book, and had to order

a second batch, and there a still a few hanging fire. Price is $5.00 plus postage and packing.

Call and order your copy now from the Divisional Office.

Request from WIA Librarian

VK2IT requires info on the Eddystone 640 RX, he is trying to get a young fellow interested in Amateur Radio. He wants to get the receiver working.

from Aub VK2AXT

Divisional Examinations

The next exams to be held at W.I.A. N.S.W. Division will be on Sunday the 11th December 1994.

This will be your last chance to obtain your licence this year so don't miss out!

Applications are available from the Divisional Office by phoning 689-2417 between 12 pm and 1pm or leave a message on answering machine at other times.

Applications will close on Thursday 1st December 1994 at 2pm.

Jim Walker VK2XJW
Exam Co-Ordinator

TRASH & TREASURE

WHEN?

NEXT SUNDAY 27th NOVEMBER

WHERE?

AMATEUR RADIO HOUSE WIGRAM ST PARRAMATTA

ENTRY .... FREE TO EVERYONE

SELLERS ARE ALLOWED IN AT 1 PM

BUYERS ... IN AT 2 PM

WHAT TO BRING WITH YOU?

MONEY ... AND LOTS OF IT!

and

A LARGE TRUCK FOR SOME OF THAT TEST GEAR

AND

THERE ARE SOME OLD TELECOM VHF CARPHONES AVAILABLE

Divisional News - Broadcast items

As a result of recent enquiries, the following criteria are set out for the benefit of clubs/Publicity Officers/Broadcast item submitters.

(i) Items for Broadcast should, ideally, be submitted to the Parramatta Office by early A.M. Friday prior to Broadcast.

(ii) Items should be clearly typed, double spaced -- 9 pin dot matrix printed materials are not suitable for fax transmission.

(iii) Items to be broadcast on more than one weekend should ideally be submitted separately for each week OR sufficient copies should be sent to cover the weeks required for each broadcast.

(iv) Items should not contain any blasphemous or slanderous materials.

LATE ITEMS

Late items may be accepted until 7.00 a.m. on the date of intended Broadcast or as agreed from time to time by the Broadcast Officer.

Inclusion of any submitted item in the Broadcast will be at the discretion of the Broadcast Officer.

Editing of any item for whatever reason will be at the discretion of the Broadcast Officer.

CLUB NEWS

As the name implies, is for that purpose only. Any Club which wishes to disagree at any time with the policies of the Council of the Division, should do so in writing, via the appropriate channels.

Items such as the above, submitted under the guise of Club News will not be read. Perhaps an appropriate place for such "News" would be after the relay of the Official Broadcast on the Club Repeater.

Late as well as regular items, can be submitted direct to the Broadcast Officer at ANY hour day or night on FAX (02) 626 6066.

WICEN News

Here is a brief report on the Co-ordinators Conference held at Charles Sturt University, Bathurst, on October 29-30th. Nineteen members attended the conference, coming from Central Coast, Hunter, Central West, Sydney South, Sydney North, and Blue Mountains. An Extraordinary General Meeting, as notified, was convened in order to receive and consider the Financial Statement, which was duly accepted. Ray Gill VK2BRF, a prominent WICEN member, was commended for his election to President of the VRA at

their recent Annual Conference. Uniforms were discussed, as were the green overalls, and their instant recognition by the various authorities were noted, as was the possible confusion between green overalls and green flags by train drivers. A training grant from the NSW Government received attention, and various proposals to use this money were considered. WICEN's responsibilities under the Charities Act and others were discussed, and all Regions are cautioned to "be careful out there" -- the various laws are a veritable minefield! There was to be a talk on the GRN Government Radio Network, but unfortunately the representative could not attend, so one of the GRN users spoke in his place, in particular on the limitations of the network; WICEN personnel need not worry that they may be superseded by GRN. The Central Coast bushfires in January were discussed, with many "behind the scenes" observations, and David Thorncraft VK2UDT is to be commended for his efforts. This was followed by a talk on the relationship between the WICEN Management Committee and the Regions, and the duties of the various positions.WICEN's role in the State Disaster Plan -- DISPLAN -- was discussed, and the importance of contacting your District or Local Emergency Management Officer and getting on to the Communications Sub-Committee was noted. A General Forum was held after dinner at the local Chinese restaurant, with many views put back and forth. The next day, Ray Gill spoke on the role played by the VRA, WICEN, and CREST, and their relationship to each other; it was emphasised that WICEN and CREST should work closer together within the VRA. This was followed by a dissertation by Barry VK2AAB on WICEN's own DISPLAN, with emphasis on preparedness, response, logistics, and co-operation with other services. Reports were then received from various Regions, followed by general discussion, and a highly-successful conference was closed. Thanks go to Peter VK2AGB for supplying the material from which this report was summarised.

Events this month include the Hunter WICEN meeting tomorrow and the closing date for the Newsletter on 30th November.

For next month, WICEN has been requested to assist with the NSW Water Ski Association "Lion Island Classic", on Sunday 11th December 1994. Along with the usual 2m requirements (which regretfully were not mentioned previously), long distance communications are required from Croppy Point to Laughtondale, and this will probably involve 80m. At least six personnel are required, from 0900 to 1430, and those interested are invited to to contact David Ramsay VK2KLX.

-- Dave VK2KFU, WICEN (NSW) Inc. Publicity Officer

Stolen equipment

Rudi Breznik VK2AOT was the victim of a major equipment robbery that took place after the Gold Coast convention last weekend (last Sunday night, November 5th).

Rudi, who owns the Sydney company, Emtronics, had equipment worth more than $25,000 taken when his car was stolen from outside a restaurant after the day's business at the convention. The vehicle was later recovered more than 150 km from the scene, but the equipment it had contained was gone.

The missing equipment included antenna tuners, antennas and various pieces of amateur equipment. Because it happened away from his business, none of the stolen equipment was insured. This loss deals a severe loss to Rudi, whose company, like many others, has suffered during the recession.

If you are offered ANY equipment (and all of this was new), at a price that seems too good to be true, please alert your local police, preferably without arousing the seller's suspicions.

Most of the stolen goods were branded "Emtron", the trading name of Emtronics, so they shouldn't be too hard to identify. All the equipment has been listed in a detailed manifest which has been handed to police.

The complete list of stolen property will be printed in the next issue of ARA (and, presumably, Amateur Radio magazine).

If you have any information or suspicions about the location of some or all of the property, please contact Rudi direct on (02) 211 0988 or by fax (02) 281 1508.

(summarised from packet bulletin originated by Chris Edmondson VK3CE)

IPS WEEKLY REPORT
---

11 NOVEMBER - 17 NOVEMBER

ISSUE No 46

DATE OF ISSUE: 18 NOVEMBER 1994

INDICES:

DATE 11 12 13 14 15 16 17
10CM 79 80 81 79 79 79 79
A 6 4 6 8 9 3 (4 ESTIMATED)

SOLAR ACTIVITY WAS VERY LOW 11TH-12TH, AND 14TH-17TH NOVEMBER AND LOW ON 13TH.

THE GEOMAGNETIC FIELD AT LEARMONTH (WA) WAS QUIET THROUGHOUT THE PERIOD EXCEPT FOR 15TH NOVEMBER WHEN THE FIELD WAS QUIET TO UNSETTLED.

IONOSPHERIC F2 CRITICAL FREQUENCIES RANGED FROM SLIGHTLY ABOVE PREDICTED MONTHLY VALUES TO 15 PER CENT ABOVE. SPORADIC E MAY

HAVE CAUSED DEGRADATIONS ON 12TH-13TH, 15TH AND 17TH NOVEMBER.
SPREAD F WAS ALSO OBSERVED DURING LOCAL NIGHT ON 17TH.

FORECAST (18 - 24 NOVEMBER)

SOLAR: VERY LOW.

GEOMAGNETIC: QUIET TO UNSETTLED, POSSIBLE ACTIVE PERIODS ON
20TH AND 24TH NOVEMBER.

IONOSPHERIC: NEAR PREDICTED MONTHLY VALUES.

COURTESY OF IPS RADIO AND SPACE SERVICES

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

CLUB NEWS

Summerland coming events

1.. Saturday, 26th Nov. .. Summerland Computer Expo. Lismore City Hall, 9am till 4-30pm. All the latest in computer wizardry and electronics. Bring and buy tables.. Lucky door prizes .. refreshments. Amateur Radio demonstrations .. admission $2.. or $4 per family.

2.. Sunday, 27th. Nov. .. applications close for the next amateur radio examination (on 11th December).

3.. Sunday, 4th December. Our annual Christmas party.. Bring your family and friends (and your eats) for a grand social outing, at the clubrooms, Richmond Hill.

--Graeme, VK2GJ Publicity Officer

Manly-Warringah

The Manly-Warringah Radio Society will be having its Christmas function at the Royal Motor Yacht Club, Newport, on Friday, 2 December. Those wishing to attend should contact club Vice president, Sean Gannon VK2THT on 979-6979 during business hours, or on Wednesday night at the society's weekly meeting.

The Manly-Warringah Rdio Society meets everuy Wednesday evening from 7.30pm, at the Warringah Volunteer Services Centre, Kamber Road, Terrey Hills, and visitors are always welcome.

--Richard Murnane VK2SKY, Publicity Officer

Chifley

Do you want to get your own amateur radio licence?

The Chifley Amateur Radio Club is conducting classes for the amateur radio licence. They will cover Morse code, Theory, and Regulations, for an amateur radio licence.

Classes start on the 5th February 1995. The classes are on every Saturday at 1-00 pm.

The address is: Good Shepherd School Hall, Hyatts Road, Plumpton, 50 metres south of Jersey Road, opposite the new shopping centre building.

Postal address: Chifley Amateur Radio Club
Post Box 280
Mount Druitt 2770

Telephone number: 625-9646

From the VHF to SHF DX Interest Group

Note

Unfortunately the publicity co-ordinator made an error in last week's broadcast newsletter (in other words I stuffed up). Please note that the group's talk night on the 22nd November 1994 will begin at 19:30 ADEST and not 21:30 as publicised last week. It will be held at the WIA premises at Parramatta. The topic to be discussed will be the construction of a two meter low noise preamplifier. (What device to use, techniques, selection of ccts, etc).

--Richard Soulie VK2ARS Publicity Co-ordinator

Blue Mountains Amateur Radio Club Inc.

Only two weeks to go to the Blue Mountains Computer and Communications Show Springwood High School, Grose Road Faulcon-bridge on Saturday 26 November 1994.

* Exhibitor/Retailer stands
* Flea Market
* Refreshments (Sausage sizzle and hot/cold drinks)
* Colour TV guessing competition
* Demonstrations HF, VHF, ATV
* W.I.A. Bookstall

Have you got something to sell - computer or radio - then why not take a stall in our Flea Market. Space is likely to be quickly taken up so act quickly. To reserve space contact Alex VK2KAS Publicity Officer on (047) 57 3256.

Hope to see you there - by the way - admission for visitors is free so why not come and browse around.

Alex VK2KAS
B.M.A.R.C.Publicity Officer

Waverley Amateur Radio Society

The Society's Christmas dinner will be held at 7:00 p.m. on Saturday 10th December at the Rose Bay R.S.L. Club adjacent to the

Society's new premises. All members and their guests are welcome and the cost is expected to be very reasonable. To assist catering please phone - Grant (VK2GIX) on 319-1913 I repeat 319-1913 if you would like to attend.

Remember - the date is the 10th of December and the venue is the Rose Bay R.S.L. in Vickery Avenue.

--Simon Buxton - VK2EII - Publicity Officer

Liverpool

The Liverpool and District Amateur Radio Club wishes to welcome all members, past members and families to its Mobile Foxhunt and Barbeque next Sunday the 27th November commencing at 10am. The starting point is the carpark of the Liverpool Swimming Centre. Bring your 2 metre Foxhunt gear.

We would like an indication of numbers of people interested in attending, so will you please call Paul VK2UPB or Brad VK2QQ on the Liverpool repeater on 146.625 MHz after this broadcast or on Tuesday evening if you are planning on attending.

--submitted by Brad VK2QQ

Coming events

Now, a summary of upcoming events of interest to members and other Radio Amateurs ...

Chifley Amateur Radio Club picnic . . . . . Today
Hunter WICEN meeting. . . . . .Monday
VHF to SHF DX Group talk night. . . . . Tuesday
Great Lakes Amateur Radio Club meeting. . . . . .Friday
Blue Mountains ARC Computer & Communications Show . . .Saturday
Summerland Computer Expo. . . . . .Saturday
Divisional Trash & Treasure . . . . . Next Sunday
Summerland ARC exam applications close. . . . . Next Sunday
Divisional exam applications close. . . . . .1 December
Solar '94 Conference & Exhibition. . . 30 November - 2 December
Manly-Warringah Radio Society Christmas function . . 2 December
Sydney Progressive ARC meeting . . . . . 4 December
WAHRA, AAPRA, & SPARC Christmas Party. . . . . 4 December
Summerland ARC Christmas party . . . . . 4 December
Blue Mountains WICEN meeting . . . . . 5 December
Waverley ARC Christmas Dinner. . . . . .10 December
NSW Water Ski Ass'n Lion island Classic (VK2KLX) . .11 December

Do you have an event you'd like publicised on the weekly broadcast? If so, then please send details to the Divisional Broadcast Officer, Michael Corbin VK2PFQ, by phone on (02) 626-9288, or by fax on (02) 626-6066. Items can also be forwarded to the Divisional Office.

Is this really all you've distilled from a "kilo" of arguments? Leaving all other arguments aside, code (aka on-off keying) is and will always be the way to generate and receive RF using the simplest possible equipment, whether it's a spark transmitter and Branley coherer, or a one-tube transmitter and two-tube regen, or whatever you'd like to put together out of your semi collection. When a majority of hams find this kind of equipment trivial from a design and understanding point of view then let's drop the code and congratulate ourselves on having technically-competent membership, but the fact is that most hams *cannot* generate or receive RF other than by writing a check, so the code remains a useful tool to help those hams who want to learn more about the core circuitry of their hobby. If you're not convinced, try putting together a CW HF rig, and then try a VHF FM rig, and see which one is easier to get running, and provides more utility and pleasure. Decide for yourself.

Mike, KK6GM

2883. Re: Need Mods for Icom W2A

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-22 00:25:21 UTC
From: wwhitby@aol.com
Message-ID: <3ardph$a6v@newsbf01.news.aol.com>
Source record: 256427

Extended Rx

Simultaneously push [Light], [B], and [#] keys while turning the power on.

Direct Keyboard Entry

1. Perform the above extended Rx mod

2. Access the setup menu ([Fcn] [8])

3. Step throught the options using the [UP] or [DN] keys until you come to a parameter not listed in the owner's manual called PL. This sets the highest MHz place that can be directly entered via the keyboard, selectable between 1 mhz, 10 mhz, and 100 mhz.

4. Using the VFO knob, set the PL parameter to 100 MHz.

5. Exit by pressing the PTT button or [CLR].

The VFO can be tuned to any frequency by entering the numbers directly from the keypad. For example, if you want to tune to 443.300, you would press [#] [4] [4] [3] [3] [0] [0].

Crossband Repeater Function

1. Perform the above mentioned wideband Rx mod.

2. Enter the desired freqs and/or modes.

3. Press the [VMAIN] key.

4. While holding down the [FUNCTION] key, press the [2] key. Press the [ENTER] key. The keylock symbol [F] will flash on the LCD, indicating the unit is in crossband repeat mode.

5. To cancel this mode, push the [FUNCTION] and [ENTER] keys simultaneously.

Extended Transmit Mod

Call the ICOM parts department ((206) 454-8155) and order a pair of MA133 diodes (P/N 1790000850). These are the three terminal surface mount diode packages. It is probably not advisable to substitute conventional leaded glass diodes here due to size restraints.

The modification involves removing one surface mount component and installing two others. The working parts are extremely small and the mod should not be performed unless you are comfortable with working while using a loop eyepiece or other magnifying device. This is a

"surgical" operation. Take all the usual precautions with respect to static electricity, etc.

Remove 5 screws holding back on, and two screws on side of case below the PTT switch. Gently pry the unit apart.

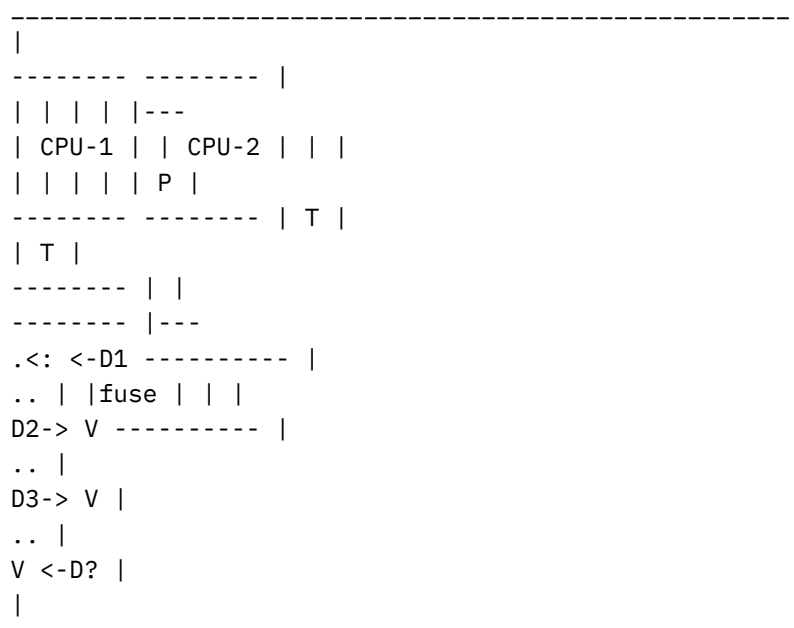
Inside the unit are two RF "stack" units. The complete RF "stack" is composed of two enclosed sheet metal boxes sandwiched together, about 1.5" wide, 2" tall and .5" thick. Each RF stack unit (one per band) is totally self contained, is about .25" thick, and plugs into the "motherboard" using connectors mounted on one end.

First, remove the stack units. To do this, remove one screw from each side of the stack. Remove the single screw off the bottom end of the stack and gently remove the metal spring clip holding the stack together.

Carefully lift each stack unit out by pulling it back and down. They should easily unplug from the upper motherboard. Set them aside for now.

At this time the back side of the front panel is clearly accessible and the two CPU's are visible side-by-side across the top. Now refer to the following illustration:

Top of Radio, Back side of Front Panel



D1, D2 and D3 are locations on the board. Only D2 is installed at the factory. To perform the mod, you must do the following:

Remove D2
Install D1
Install D3

The locations of D1 and D3 are clearly silk screened onto the circuit board and are easy to locate. Don't attempt to re-use D2. The periods (..) show the approximate location of the solder pads for the 2-legged sides of the diodes.

Diode D2 may be removed by carefully heating the leads and prying it up using a sharp tool. Be very careful since it's easy to lift the solder pads.

One method of installing diodes D1 and D3 is to use a very small drop of super glue to mount the part, and then use a soldering iron to tack down the pins.

After the parts are installed, reassemble the radio. Although the manufacturer recommends that the microprocessor be reset after this mod, I have found it to be unnecessary. All memories retained their settings after the mod. Tests using a dummy load and a frequency counter showed TX ability on UHF from under 400MHz to over 490MHz. TX on VHF covers from 136MHz to 174MHz.

Hope it helps,

Warren Whitby

>In reminder of this tragedy the challenge is for some one to DESIGN and
>BUILD a transmitter or transponder that could be turned on by both a fire
>fighter or a tracking team trying to locate a fire fighter.

Saturday, while at a nearby fire station looking at the new engine,
one of the crew pointed out their personal locator beacons.

These small devices were designed so that if motion stopped for 20 or
30 seconds, they started a loud audible alarm. The firefighters were
all equipped to track the audible alarm, being equipped with standard
model ears.

The audible alarm suffers less from multipath, and needs no special
equipment for carrying it. It also goes off before the firefighter is
missed by outside personnel.

They seemed like a real good idea.

ARLX031 Big Dish details

ZCZC AX63
QST de W1AW
Special Bulletin 31 ARLX031
From ARRL Headquarters
Newington CT November 21, 1994
To all radio amateurs

SB SPCL ARL ARLX031
ARLX031 Big Dish details

Big-Dish operation from VE3ONT during the ARRL EME Contest November 26 and 27 is confirmed. They will transmit on 144.100 and listen between 144.100 and 144.110 on both days.

The station will run full legal power into the 46-meter (150-ft) dish at Algonquin Park, Ontario (grid FN05xw). The lower elevation limit of the dish is 9 degrees, so Moon access is somewhat limited.

VE3ONT is especially interested in working small stations, and the operators plan to ''work through'' the bigger stations as rapidly as possible. SSB operation is planned for about an hour at Moonrise and from time to time thereafter. If you want to work VE3ONT on SSB, please wait they switch to that mode.

Please also do not request multiple QSOs, even on different modes, because this practice reduces the chances for small stations to work them.

Small (OSCAR-class) stations may want to delay their attempts until somewhat later in each Moon pass, to avoid QRM. And avoid calling VE3ONT on 144.100.

The operators will make rapid-fire contacts, using the ''T-M-O'' method instead of RST signal reports. VE3ONT will have no skeds, no ''special'' listening frequencies, and will not be available via telephone.

There will be no pre-contest operation on 50 MHz or 10 GHz, as earlier had been hoped.

As users of a non-amateur antenna, VE3ONT is not in competition with any other stations. Thanks to Mike Owen, W9IP, for this information.

I think 2400 is OK (is that used anymore? I only hear about 1200, 9600)
but 9600 seems to be out. At least I think... ;-)

I think a talk with their boss as to why his guards were interfering
with a federally licensed radio station would have been in order...
Of course, you'd have to have a copy of your license with you (we all
carry this, don't we?)

You can buy those SAME amplifiers directly from Mirage, last time I
checked. The ATV versions are availiable from them. I have old catalogs
listing them.

Aren't those remote news links running with about 4 MHz deviation, for a bandwidth of 16 - 18 MHz? I am told the standard is that. We are not running satellite links, after all.

My FM signal blows doors off of the AM one I used to have at the same power.

I read a story, that I believe was an Australia's Amateur Radio Action, circa 1992, about someone having problems with customs wanting to see an HF rig powered up, when they had no 12Vdc source. Only the 110/220Vac was available, which they wanted the ham to power it with, and he made a mistake by saying "It would blow-up my radio..."

He ended up handing it to a friend who mailed it to him.

Source record: 256335

-Broughton,J.L. (waco@intgp12.ih.att.com) wrote:

: Either way is correct. What is not correct is 12:00 a.m. or 12:00 p.m., as
: no such beast exists. Noon is the meridieum (meridian) and a.m. indicates
: time before it (ante meridieum) and p.m. indicates time after it (post
: meridieum). So, 1200 hours cannot be before or after itself and 2400/0000
: hours is both 12 hours before and after, so can't be just one. Noon and
: midnight are the real times. But, using 24-hour format solves this problem;
: hey, it works for Europeans!

Whoops! As I understand it, "midnight" in English actually refers to
the *end* of they day. That means "midnight" = 12 p.m. = 2400. I
have heard that "midnight" in a legal contract will be interpreted
this way - right after a very expensive lawsuit. (My insurance
policies begin and end at "12:01 a.m. Eastern Standard Time." Well,
it's unambiguous, but if your policy expires on the 31st of October,
it's *not* OK to drive on Halloween!)

Unless you're a digital clock, 12 a.m. indeed doesn't exist and (ready
for this?) 12 noon is properly styled "12 m." ("meridies" = "noon")
Talk about confusing! Fortunately, I think I'm the only left one who
knows this stuff, and I try never to use a 12-hour clock.

>each other within the law. A half dozen !!!!!! expressed ironical admiration
>of another operator's stupidity.

On the maritime CW frequency of 500 kHz (the international distress
and calling freq) we used __..__ to call someone a lid - instructors
at Coast Guard radio school actually told us to use it (unofficially,
of course). Now I know where that `prosign' came from! Thanks Larry.

There are two worldwide 3 minute silent periods observed on 500 kHz:
minute :15 to minute :18, and minute :45 to minute :48. No one is
supposed to transmit so much as a single dit (ITU regs!) during those two
3-minute periods. But occasionally, either because of an incorrect
clock in the ship's radio room or just to be a pest, someone
somewhere in the Pacific would maybe tune up or make a call during
a silent period. At least 50 ships and shore stations would pounce
on the lid with a barrage of:
QRT SP (``stop transmitting - it's the silent period'') and
dozens of __..__ - the poor guy would sheepishly say SRI.

While I'm on the subject, occasionally someone, just for fun,
would send a single dit on 500. Of course, that was an invitation for
someone else to send a single dit. Then all heck would break loose:
Hundreds of operators would hit their keys; as quickly as it
started it would die off. We had to log all signals we heard
on 500 kHz, but how to log hundreds of dits? A variation was
for someone to send a single GM (``good morning'') say at 0200
local (all the shore ops are a bit drowzy about then). Of course
it would be rude not to reply in kind so a hundred GM's would
flood 500 kHz.

I wrote a 7-part series about 500 kHz for the Boatanchors radio
newsgroup - this series has been published in various club news-
letters around the country. If anyone would like a copy let me
know.

Jeff NH6IL, ex NMO (Coast Guard Radio Honolulu) CW operator

Rec.radio.amateur.misc Frequently Asked Questions
Part 1 - Introduction to the FAQ and Amateur Radio
------------------------------------------------------------------------------

This is a regular posting of frequently-asked questions (FAQ) about Amateur
Radio, also known as Ham Radio. It is intended to summarize some common
questions on the rec.radio.amateur.misc newsgroup and Info-Hams mail list
as well as to help beginners get started.

Please provide a copy of the FAQ to any new or soon-to-be Hams you know.

Regular FAQ postings can help save network bandwidth and maintain a good
signal-to-noise ratio in the newsgroup. However, they can't do it alone - you,
the reader, have to use them.
* If you are a new user, please print and review the FAQ articles and look at
the instructions in the news.announce.newusers newsgroup before posting any
articles. If you don't find the answer in the FAQ and you have tried
elsewhere, then you have "done your homework" and it is acceptable to ask
the question on the UseNet newsgroups. Along with your question, please
state where else you have looked for the answer so others also know that
you have done your homework.
* If you are an experienced user, please help by refraining from answering
frequently-asked questions on the newsgroup if they are already answered by
the FAQ articles. Instead, send e-mail to the user who asked the question.
(It will be helpful if you include the part of the FAQ that answers their
question, but not the whole thing.)

The FAQ cannot always prevent people from posting repetitive questions. But
even if hundreds of questions get posted, it saves you from having to answer
them hundreds of times. Also, a friendly pointer to the FAQ in your first
answer can help that person refer to the FAQ in the future. That is when we
can begin to get a real savings of network bandwidth.

To reduce the size of each article, the FAQ information is posted in 3 parts:
Part 1 - Introduction to the FAQ and Amateur Radio
Part 2 - Amateur Radio Organizations, Services, and Information Sources
Part 3 - Amateur Radio Advanced and Technical Questions

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 1--

** Introduction to the FAQ

* How to Contribute to the FAQ Articles

We accept suggestions from the Amateur Radio community. Please consider that all new contributions need to be SHORT and concise in order to be included. If a contribution is too long, the FAQ editors can help you find a more appropriate FTP archive or mail server for your article.

We always accept corrections. Please allow some time (often not the next issue of the FAQ) because the FAQ maintainers do this as volunteers so each must give higher priority to their employers.

Send correspondence to hamradio-faq@amdahl.com so that it will reach all the FAQ coordinators: (listed in alphabetical order)

* Please Send Questions to the Newsgroups, Not the Editors

We wish it wasn't necessary to say this. Please don't send questions to the editors (unless you are sending an answer with it as a submission for the FAQ.) The proper procedure for questions on UseNet is
1) Read the FAQ
2) if it isn't there, check other sources (see Part 2 of the FAQ for electronic sources including Mosaic/WWW)
3) post on the newsgroup

The Internet has become an atmoshpere where questions are asked of everyone as if they have an infinite amount of time to help. The volunteers who maintain the FAQ do not have time to answer questions. Some FAQ maintainers on other newsgroups have been led to believe that no good deed goes unpunished - let's avoid bringing the same end to this effort.

* Call for FAQ Editors

As with any volunteer effort, new volunteers are often needed. The previous paragraph may have already given a hint about this: we need a new editor to post the Ham Radio FAQ. Preferably this should be someone who has enthusiasm for Ham Radio, experience with UseNet, and the ability to work with the other editors. No single person can know all the various aspects of this diverse hobby so the editorial review group is intended to make a greater combination of experience.

The FAQ is currently posted with the AUTO-FAQ software, which is written in PERL. So it would be a plus for volunteers to post the FAQ to have PERL installed on their system and be able to use "cron" or "at" so that postings can go unattended.

Anyone who wants to make their contribution to the Net as a volunteer should contact hamradio-faq@amdahl.com.

* Acknowledgements

All questions listed as modified "pre-4/92" are entirely Diana Carlson KC1SP's work or her editing of a contributor's work. Diana established this FAQ and credit is due to her for founding this project.

Thanks to Devon Bowen KA2NRC for accepting this FAQ in e-mail every month to keep the FTP archive at ftp.cs.buffalo.edu up-to-date.

* Notes on "Netiquette"

The rec.radio.amateur.misc newsgroup and Info-Hams mail list have a large daily volume of traffic. They can operate more efficiently if the following netiquette guidelines are followed. Please take them seriously.

* If you are new to UseNet, the introductory articles in news.announce.newusers are required reading. Go to that newsgroup now. Definitely, read the instructions there before posting anything. Other rec.radio.amateur.* readers will appreciate it!
* Pick the right newsgroup. Use only the most specific newsgroup for your subject. For example, a question about a homebrew antenna only needs to be posted to rec.radio.amateur.antenna. Also, don't post to rec.radio.amateur.misc when the subject can go in another rec.radio.amateur.* newsgroup. So, when there is a more specific newsgroup, that's the one you want.
* When posting a followup article, ALWAYS try to minimize the number of lines of quoted material from the original article.
* As a general rule when you try to determine whether to reply to someone by e-mail or with a followup article, remember to "praise in public, criticize in private." It's OK to disagree technically but be careful not to attack the person with whom you disagree. Also, be careful with your use of the word "you" when posting a follow-up article. Many unnecessary flame wars have started that way.
* Use a descriptive subject. For example, a message subject of "Ham Radio" tells the reader NOTHING about the contents of your article since the whole newsgroup is about Ham Radio. Other examples of subjects which are so broad that they become useless could include, "Help," "A Question," "Antennas," or "Frequencies." Maybe "Books on Antennas?" or "Where can I find Repeater Frequencies?" would be better, for example. Remember, in a busy newsgroup a lot of users decide which articles to read from the subject line alone. If you post, don't deprive yourself of an audience!
* Before answering a question, check if the FAQ adequately answers it or if someone else already answered it. If you have more to add, make sure to reference either the FAQ or the related articles.
* If a user posts a question which is directly answered by the FAQ, there is no need to post an answer - the information is already available on the newsgroup. Instead, just send an e-mail message which politely explains where to find the FAQ. They will probably appreciate it if you include the answer to their question. (Don't send a "nastygram" - that would just discourage future participation.)
* Pay attention to the size of your audience - use the "Distribution:" header. If you leave it blank, your message will go to every civilized country in the world and occupy disk space in all news systems in all those places. If that's what you intend, that's fine but make sure your article is relevant outside your country. (In particular, Hams should already know there is more to the world than just their own country.)
* If you have an item for sale, please limit the distribution area so that, for example, an article about a radio for sale in New Jersey won't get to California or Europe. If you wish, you may cross-post

your for-sale article to rec.radio.swap.
* Software sources should be posted to either alt.sources, comp.sources.misc, or comp.sources.* for a specific machine type. Software binaries should be posted to the appropriate subgroup of comp.binaries.

** What is Amateur Radio?
Amateur Radio is a non-commercial radio communication service whose primary aims are public service, technical training and experimentation, and communication between private persons. Amateur Radio operators are commonly called hams. Hams often communicate with each other recreationally but also provide communications for others at public events or in times of emergency or disaster.

** Who can become a ham?
The answer to this question differs in every country.

The answer for the USA is listed below. If your country has a newsgroup specifically for it (i.e. UK, Australia, Germany) the most accurate answers can be found there. See Part 2 for the list of region-specific newsgroups.

If that doesn't help, the American Radio Relay League (ARRL) may be able to help because they communicate with similar organizations in other countries, probably including yours. They can be reached by electronic mail or surface mail (see Part 2.)

In the USA, anyone who is not a representative of a foreign government can be an Amateur Radio operator. There are tests that you must pass to get a license, however the tests are not insurmountable. On that general level, the requirements are probably similar in almost every country.

For more information on becoming a Ham in the USA, the ARRL has a toll-free number where you can request information: 1-800-32-NEW-HAM (don't worry about the number being one digit too long - the phone system ignores it.) Other information can also be obtained from the ARRL e-mail information server in the file called PROSPECT. Details on the server are in Part 2.

** Where can I locate information and books on Amateur Radio?
Your local Radio Shack sells some ham radios and Amateur Radio license books. Books can also be obtained through the mail from ham radio organizations, such as ARRL in Newington, CT (203-666-1541) and W5YI in Dallas, TX (1-800-669-9594). There may be one or two ham radio stores in the local area (ie, within 50 miles). Try looking in the Yellow Pages under Radio Communications.

For the Novice license, get a Novice License manual, plus 5-word-per-minute Morse code tapes, costing around $25. For the Technician license, get a combined Novice and Technician License manual, and an FCC

Rules manual, costing around $32. The FCC Rules manual is a good idea for Novice also, but not necessary, since the Novice License manual contains all the FCC Rules that are required for the Novice License.

The ARRL Education Activities Department has several programs to help amateurs (or prospective amateurs) to get started. Ask for a "New prospect package" available free of charge, from ARRL HQ, Educational Activities Department, 225 Main St, Newington, CT 06111.

Information on Ham Radio can also be obtained with your computer. Part 2 of this FAQ contains a significant amount of material on that subject.

** How much does it cost?
To take the tests for any class of amateur radio license, there is a small charge (around $5-$6 currently) to cover copying costs and running the testing sessions. (Due to changes in 1993, Novice tests are under same procedures as the others.) The cost of a radio is really dependent on what you want to do. You can make your own radio and antenna for under $150. You can buy a used single-band radio for $150-$300. Or you can buy a new multi-band multi-mode radio with all the doodads for $300-$3000. I'd suggest you learn more about ham radio, talk to local hams, find out what you want to do with ham radio first.

** Where can I take the tests?
The Novice tests Used to be given by any two qualified hams of General class license or above. Now all the license tests are given by three qualified Volunteer Examiners (VEs) who volunteer their time.

To locate an ARRL testing session in your area, you can contact ARRL at 203-666-1541 x282.

See also the section "Where can I find VE sessions in my local area?" in Part 2 because more information is available via UseNet.

** What are the tests like?
First off, come prepared to VE sessions. Bring: TWO forms of ID, one of which has a picture on it; a calculator (if necessary); a pen and two pencils; the applicable examination fee (around $5-$6 for 1993); the original AND a copy of your current Amateur Radio license (if you have one); the original AND a copy of any CSCEs for tests you've already passed (if you have any).

Each of the written tests (Novice, Technician, General, Advanced, and Extra) are generally a multiple choice test of approximately one-tenth of the question pool. For example, if the question pool is approximately 300 questions, then the test will be a 30-question test. You need to get 75% correct to pass. Note that they truncate to determine the correct number of questions. That means for a 30 question test, you need to get 22 right, which is actually only 73.3%.

Once you've paid the small fee for Technician-Extra tests, it costs no extra to take another test, so I'd suggest you keep taking the next more advanced test until you fail. If you pass the written but not the Morse code (or vice versa) for a specific class license, you have up to one year to take the other test before you would have to retake the written test again. Note that some VEs will not allow you to take the written test unless you've first taken the Morse code test.

The Morse code test is a receiving test only. The test run 5 to 7 minutes. After the test, you are given a 10-question multiple-choice or fill-in-the-blank test. Passing grade is 7 or more. If you fail the 10-question test, the examiner team will examine your copy sheet to see if you have 1 minute of solid copy with no errors. For 5 wpm, that's 25 characters, for 13 wpm, that's 65 characters, for 20 wpm, that's 100 characters. If they can find 1 minute solid copy, you've still passed.

Hints on Morse code tests: Generally, it will be a standard QSO (conversation), and it MUST contain at least one of each of the following:
26 letters A-Z, 10 numbers 0-9, comma (,), period (.), slant or slash (/), question mark (?), double dash prosign (BT), end of message prosign (AR), end of contact prosign (SK).
The letters count as one character, all others count as two characters. There are a couple other prosigns which are worth knowing, but will not be on the test, like "I'm done talking, next" is K, "I'm done talking, back to you" is KN, "Please wait" is AS.

** What can I do with a ham radio license?
There are so many things, it's a difficult question to answer, but here's some ideas:
* Talk to people in foreign countries.
* Talk to people (both local and far away) on your drive to work.
* Help in emergencies by providing communications.
* Provide communications in parades or walkathons.
* Help other people become hams.
* Hook your computer to your radio and communicate by computers.
* Collect QSL cards (cards from other hams) from all over the United States and foreign countries and receive awards.
* Participate in contests or Field Day events.
* Provide radio services to your local Civil Defense organization thru ARES (Amateur Radio Emergency Service) or RACES (Radio Amateur Civil Emergency Service).
* Aid members of the US military by joining MARS (Military Affiliate Radio System).
* Participate in transmitter hunt games and maybe build your own direction-finding equipment.
* Have someone to talk to on those sleepless nights at home.
* Receive weather pictures via satellites.
* Build radios, antennas, learn some electronics and radio theory.
* Talk to astronauts in space, or use the moon to bounce signals

back to people on the Earth.
* Experiment with Amateur TV (ATV), Slow-Scan TV (SSTV), or send
still-frame pictures by facsimile.
* Experiment with amateur satellite communications.

** What can't I do with an Amateur Radio license?
The most important thing you can't do is transact business of any
kind over ham radio. Interference to other hams or services, as
well as obscene, profane or indecent language is not tolerated and
is illegal. Music and broadcasting are not allowed on ham radio.
Some personal conversations may not be appropriate to Amateur Radio.
Do you really want the whole world to hear about Aunt Mabel's
hemorrhoids?

** I'm interested, who will help me?
There are hams who are willing to become "Elmers" (mentors, helpers)
in your local area. Look around and ask local hams. Search out local
radio clubs. As well, some people have volunteered to be an Elmer
over the Usenet. A list of UseNet Elmers and their e-mail addresses
is posted to the newsgroup monthly. If anyone wants to be an Elmer,
send e-mail to
elmers-request@unomaha.edu

There is also a lot to be said for exploring on your own. Take a
look around the FTP archives and e-mail servers listed in Part 2.
There's so much out there on UseNet, you'll find plenty of things
you're interested in.

** Should I build my own equipment or antenna?
[see also rec.radio.amateur.homebrew and rec.radio.amateur.antenna]
"Homebrewing" is a fun and educational part of ham radio. It is a
thrill to build your own transmitter and put it on the air. However,
building your own receiver can be quite complicated; if you don't have
electronics experience, you may want to buy a receiver instead. Most
homebrew transmitters are QRP (transmit very low power). That's fine
for an experienced ham with a very good antenna, but a Novice ham will
just get frustrated. Your first rig, therefore should NOT be a home-
brew.

Antennas can be much simpler projects than the transceiver, though
some types are also quite involved. Most hams build their own anten-
nas for base station use and buy antennas for mobile (car) use. Most
beginner ham books describe how to build different types of antennas.
Order of difficulty, from easiest to more difficult, for some common
antennas are: wire dipole, Zepp, Yagi, Quad, and Log-Periodic. Books
from many sources, including ARRL and several Hams, discuss antennas
in depth.

When building or even understanding antennas, it is good to know the
relationship between the antenna element length and the frequency or
wavelength it is designed for. An antenna performs best at multiples
of 1/4 of that wavelength, though 5/8 wave also has beneficial qualit-

ies. The wavelength is related to the frequency with the following formula:

wavelength (in meters) = 300 / frequency (in megahertz)

You do not need a huge antenna or tower like ones you may see around your neighborhood. Large beam antennas and 40-foot towers are very expensive. As a beginner, a simple dipole antenna is perfectly adequate. As you gain experience (and money :-), you may want to invest in something bigger.

If you can afford new rigs and antennas, there are many mail order stores that advertise in ham radio magazines. If you want to buy a used rig, the best place is at a "hamfest" (ham flea market). You should take along an experienced ham, since some of the used equipment may be inoperative, overpriced or poor quality. You can also answer ads in ham magazines or posted at ham radio stores, although often, by the time you call, the equipment has already been sold.

2901. rec.radio.amateur.misc Frequently Asked Questions (Part 2 of 3)

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-22 06:12:23 UTC

Rec.radio.amateur.misc Frequently Asked Questions
Part 2 - Amateur Radio Organizations, Services, and Information Sources
------------------------------------------------------------------------------

Questions discussed in Part 2: (dates indicate last modification)
** Where can I find Ham Radio information with a computer? (8/94)
* Mosaic, World-Wide Web, Gopher, and WAIS (8/94)
* The rec.radio.* newsgroups (2/94)
* The ARRL e-mail server (1/93)
* The KA6ETB e-mail "HAM-server" (10/94)
* The Internet File Transfer Protocol (FTP) (2/94)
* Access to FTP archives via electronic mail (1/93)
* The Ham-Radio mail list: rec.radio.amateur.misc by mail (9/93)
* Telephone BBS's with Ham-related information (9/93)
* Callsign servers and geographical name servers (1/94)
* FTP access to FCC Part 97 and FCC Amateur Radio question pools (1/94)
* Lists of radio modifications and extensions (2/94)
** Can I send ARRL or W5YI electronic mail? (11/92)
** "Why doesn't the ARRL do...?" (11/92)
** What magazines are available for Ham Radio? (pre-4/92)
** How do I use the incoming and outgoing QSL bureau? (11/92)
** Are there any news groups for CAP? (11/92)
** What's the name of the QRP club that issues QRP numbers? (9/93)
** How do I become a 10-10 member? (9/93)
** How do I join MARS? (9/93)
** How do I join RACES? (pre-4/92)
** What organizations are available to help handicapped hams? (pre-4/92)
** I am looking for a specific ham, can anyone help me find him? (6/93)
** Can I post my neat new ham related program on rec.radio.amateur.misc?
(pre-4/92)
** Where can I get ham radio software for my computer? (9/93)
** Are there Dialup News services or BBSs for Amateur Radio? (4/92)
** Where can I find VE sessions in my local area? (9/93)
** Why isn't XXX available electronically? (1/94)
** I'd like to volunteer to help ham radio through electronic
information services like those mentioned in this FAQ list.
Where should I start? (2/94)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 2--
```

** Where can I find Ham Radio information with a computer?
This question has many answers spanning several electronic media including WWW, UseNet, electronic mail, the Internet, dialup BBS's and others. Various electronic information sources are summarized under the subheadings that follow.

All electronic mail addresses listed are in Internet format. If your site is not connected to the Internet and does not support Internet-style mail addresses, you will need to contact either your system administrators or a local "guru" to find out how or if you can send mail to the sites listed. Ask them, "how can I get mail to the Internet?" and show them the address you're interested in.

* Mosaic, World-Wide Web, Gopher, and WAIS
A new generation of information retrieval tools exploded into great popularity on the Internet in 1993 and 1994. They are the gopher protocol, wide-area information server (WAIS) and World-Wide Web (WWW). They are indeed complete topics of discussion unto themselves which can be found, among other places, in the following newsgroups:

comp.archives
comp.infosystems.announce
comp.infosystems.gopher
comp.infosystems.wais
comp.infosystems.www

Please read those newsgroups if you have questions about the software or how to use it.

At the current rate of growth, we can never hope to list all the servers. We would like cooperation from people who assemble WWW servers to add references to other useful Ham Radio information available at other WWW, gopher, WAIS, and FTP sites. That way the FAQ can direct readers to servers that can reference more servers with more information than we can include on a periodic UseNet posting.

Some useful URLs (uniform resource locators) which can be used with WWW (Mosaic, Lynx, etc.) are as follows:

General Ham Radio Information:

Amateur Radio Virtual Library
http://buarc.bradley.edu/wwwvl-ham.html
Ham Radio FAQs & info: (The OSU server turns this into WWW hypertext)
http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/ham-radio/top.html
file://rtfm.mit.edu/pub/usenet/radio/ham-radio
all radio FAQs & info:
http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/top.html
wais://rtfm.mit.edu/usenet/radio
Federal Communications Commission:
http://www.fcc.gov/
http://www.fcc.gov/1/Private_Radio
North Carolina State HamRadio WWW Server:
http://www.acs.ncsu.edu/HamRadio

Yahoo's Ham Radio Index:
http://akebono.stanford.edu/yahoo/Entertainment/Hobbies_and_Crafts/Amateur_Radio/
EINet Galaxy's Ham Radio Page:
http://www.einet.net/galaxy/Leisure-and-Recreation/Amateur-Radio.html
O'Reilly's Whole Intrernet Catalog's Ham Radio Page:
http://nearnet.gnn.com/gnn/wic/hobbies.02.html (Eastern USA)
http://www.digital.com/gnn/wic/hobbies.02.html (Western USA)
http://bond.edu.au/gnn/wic/hobbies.02.html (Australia)
http://quasar.sba.dal.ca:2000/gnn/wic/hobbies.02.html (Eastern Canada)
http://www.wimsey.com/gnn/wic/hobbies.02.html (Western Canada)
http://www.Germany.EU.net/gnn/wic/hobbies.02.html (Germany)
http://www.ntt.jp/gnn/wic/hobbies.02.html (Japan)
http://www.elvis.msk.su/gnn/wic/hobbies.02.html (Russia)
http://src.doc.ic.ac.uk/gnn/wic/hobbies.02.html (UK)
University of Buffalo's FTP server:
file://ftp.cs.buffalo.edu/pub/ham-radio
Oakland University's FTP server:
file://oak.oakland.edu/pub/hamradio

Specialized Topics:

SAREX: Shuttle Amateur Radio Experiment
http://hypatia.gsfc.nasa.gov/sarex_mainpage.html
Morse Code Demo
http://macgwy-mac2.gsfc.nasa.gov/GARC/exp/morse.html

Although still very much works-in-progress, the last two URL's
are excellent examples of WWW servers with numerous references
to other resources.

* The rec.radio.* newsgroups
The primary distribution mechanism for this FAQ is UseNet. There
are several newsgroups dealing with Amateur Radio and other aspects
of radio. The full list is as follows:

rec.radio.amateur.misc (*) Ham Radio - misc/general topics
rec.radio.amateur.antenna Ham Radio - antenna construction/theory
rec.radio.amateur.equipment Ham Radio - manufactured equipment/mods
rec.radio.amateur.digital.misc Ham Radio - digital radio modes: packet/
AMTOR/RTTY/etc (formerly r.r.a.packet)
rec.radio.amateur.homebrew Ham Radio - radio experimentation, kits
rec.radio.amateur.policy Ham Radio - policy & regulation
rec.radio.amateur.space Ham Radio - satellites, EME, shuttle/MIR
rec.radio.broadcasting public broadcast radio
rec.radio.cb Citizens' Band Radio
rec.radio.info (*) periodic info from all rec.radio groups
rec.radio.noncomm misc non-commercial radio topics
rec.radio.shortwave Shortwave Radio
rec.radio.scanner Utility Radio above 30Mhz
rec.radio.swap radio equipment wanted and for sale

Country- or region-specific newsgroups include the following:
aus.radio Australia (misc radio topics)
aus.radio.amsat Australia (amateur satellites)
aus.radio.packet Australia (packet radio)
de.comm.ham Deutschland/Germany
fj.comm.ham Japan
uk.radio.amateur United Kingdom
in.ham-radio USA, Indiana
sbay.hams USA, CA, South Bay Area/Silicon Valley
triangle.radio USA, NC, Research Triangle area

This FAQ is cross-posted to the newsgroups marked with asterisks (*).
It is also cross-posted to rec.answers (the archive for FAQs in the
rec.* newsgroups) and to news.answers (UseNet's general repository for
FAQs.) These should be the first places to look for new current
copies of the FAQ.

Most of the rec.radio newsgroups have their own FAQs as well.

* The ARRL e-mail server
ARRL is the American Radio Relay League, representing and promoting
Amateur Radio in the USA. They have established an automated file
server which responds to information requests via electronic mail.
To use the server, send mail to info@arrl.org with any number of
one-line commands in your message. Valid commands are as follows:

help sends more detailed instructions about the e-mail server
index sends a list of the files currently available
send file sends a file (replace "file" with the file's name)
several files are referenced by name in parts of this FAQ
quit ends command processing - use it if a signature will be
appended to your message

The server program will respond to the commands, each in a separate
message. Among many other informative files, a current copy of the
FAQ (updated monthly) can be obtained from the ARRL e-mail server.
Other parts of this FAQ refer to specific files on the ARRL server.

* The KA6ETB e-mail "HAM-server"
Steve Harding KA6ETB has an e-mail server on his 486 PC at home with
over 70 megabytes of Ham Radio-related files (at the time of this
writing.) You can request any of those files with an e-mail message
to the HAM-server at "ham-server@grafex.sbay.org". This site
has a mostly-different selection of files than the ARRL, though some
overlap is unavoidable. The HAM-server contains many plain-text
articles along with programs for MS-DOS & Windows, Unix, Mac, and
OS/2.

Use these commands to send requests to the KA6ETB HAM-server.
HELP instructions and info about the HAM-server
INDEX list of files available from the system
GET <file> send a file (see the HELP notes for more info on
getting binary files in uuencode or xxencode format)

NEWFILES <date> list of new files since the given date
PING used for testing your path to the HAM-server, it just
sends a simple reply so you can look at the path data
QUIT makes the HAM-server stop reading the message (so it
won't try to read your .signature)

Submissions for inclusion in the HAM-server may be mailed in UUENCODED
format to "incoming@grafex.sbay.org".

* The Internet File Transfer Protocol (FTP)
Sites connected to the Internet can access large amounts of data
almost anywhere in the world, often at high speeds. One common way
to transfer the data you want is FTP. Some sites offer a service
called "anonymous FTP" which allows remote users to access a set of
public files without requiring a password.

Perry Rovers coordinates a fairly definitive list (formerly
maintained by Tom Czarnik) of anonymous FTP sites, their IP
IP numbers, time zones, general contents, and access policies
which he posts to several newsgroups, including comp.archives,
comp.sources.wanted and news.answers. It is itself available
via anonymous FTP (how about that?? :-) from (among other places)
rtfm.mit.edu under directory /pub/usenet/news.answers/ftp-list.

For specific information about exact locations of files by name,
the Archie database server may be of help. First check if anyone has
installed the "archie" program on your machine and use it. Archie may
also be accessed by telnetting to one of many sites. The list
of archie sites is numerous and growing fast. For a current
list of sites, telnet to archie.sura.net (login "archie"), then
please use the one closest to you to conserve network bandwidth.

For those without telnet capability, the database may be accessed non-
interactively via mail server. Send E-mail with the word "help" to
archie@host where host is one of the Archie sites above.

The above two resources (the FTP list and the Archie server) are
extremely powerful tools for finding out "what's out there" at various
FTP sites around the world. *PLEASE* exhaust their capabilities
before posting requests to the net.

The following is a brief summary of major ham-related FTP sites and
places where you can obtain a current copy of this FAQ:

ftp.cs.buffalo.edu:/pub/ham-radio
(submissions to this ftp site should be made to
bowen@cs.buffalo.edu) - Contains many ham radio files,
including the FAQs, Elmer list, SWL and scanner info, Packet
FAQ, examination opportunities, information on various
regulations, information on commercial radios (i.e. GE or
Motorola), SSTV (slow-scan TV), HTs (handheld transceivers).
Recently, the rec.radio.amateur Working Group (rra-wg,
see below for more information about their mailing list)

has started to encourage archivers of radio modification
instructions to mirror them at this site. In this way,
maintainers may come and go but the collection of
mods will remain continuously available (and undergo
constant positive growth). This FAQ is updated monthly
here.
grivel.une.edu.au:/pub/ham-radio
Australian mirror of ftp.cs.buffalo.edu
nic.funet.fi:/pub/ham
This is one of the largest FTP sites in Europe and maybe the
most popular. /pub/ham/info contains a mirror of Buffalo.
Other topics available here include amiga, antenna, HF, packet,
satellite, scanners, program sources, VHF and others.
This site is also one of the article archives for the
rec.radio.info newsgroup.
ftp.uu.net:/networking/ka9q
A large FTP site in the USA - UUNET contains sources and
binaries for many different types of computers.
ftp.ucsd.edu:/ (site was down when we were looking for the new path)
The "home" site (with the most recent versions for the largest
number of different computer platforms) of the KA9Q TCP/IP
Network Operating System (NOS), other ham-related software,
and the archives for the Info-Hams, Packet-Radio, Ham-Policy,
Radio-Info and TCP-Group digests.
vixen.cso.uiuc.edu:/pub/ham-radio
This site contains the HyperCard Hamstacks written by Diana
Carlson as well as ASCII readable ham radio question pools.
ftp.apple.com:/pub/ham-radio
Ham software and information, especially Macintosh software
rtfm.mit.edu:/pub/usenet/news.answers/radio/ham-radio
all participating FAQs and periodic informational postings are
archived here, including those from the rec.radio.* newsgroups
which can be found in pub/usenet/news.answers/radio.
Participating FAQs are automatically archived here when they
are posted on UseNet.
ftp.amdahl.com:/pub/radio/amateur
cd pub/radio/amateur - the most up-to-date copy of the FAQ
(updated nightly when changes are made)
world.std.com
The Ham Radio archive at this site has been moved to
oak.oakland.edu.
oak.oakland.edu:/pub/hamradio
oak.oakland.edu:/pub/hamradio/arrl
Mac, Amiga, Atari, PC files in their own subdirectories.
Also radio mods and an Internet mirror of the ARRL info
server.

See also the file FTP-INFO on the ARRL e-mail server.

If you experience difficulty connecting to the above FTP sites, some
troubleshooting hints are shown below. The unfortunate situation here

is that Netnews is far more prevalent than direct Internet hookups, accurate name servers, smart mailers and routers, and of course, telnet and FTP client services. What this means is that your trouble may be caused by MANY factors.

Here's some hints to check what's wrong:
* It may very well be that your newsfeed and email are via dialup line and UUCP (Unix-to-Unix copy) in the wee hours of the morning. If this is the case, then you have no direct connection to the Internet and thus cannot use real-time interactive services like FTP and telnet.
* If you are at a college or university, your host (ie, the computer you are logged onto) may be on the Bitnet network, which has an email gateway to the Internet, but no direct connect capability.
* If you do have a direct connection to the Internet, does your host have telnet and/or FTP client programs? (ie, if you type "ftp" or "telnet" at your command prompt, do you get anything?) Many hosts, particularly IBM mainframes not running Unix, do not support these services!
* Can you telnet to other hosts and get a login prompt?
It may very well be that some hosts are "not recognized" due to misconfigured connections and inaccurate host tables/name servers (*.mil computers are *NOTORIOUS* for this!)
* If you get "host not in host table" or "host unknown" or similar error, try telnetting via the IP number, a set of four 1-3-digit numbers separated by periods (eg, 198.137.220.1). The exact IP number for the site can be obtained via the nslookup utility, if your computer supports it. (The FAQ does not print IP addresses any more because they change so often.) Your system may not recognize the "fully-qualified domain name" (like callsign.cs.buffalo.edu), but it should ALWAYS recognize an IP number if their network is reachable from yours.
* If you get "network unreachable" check with some more knowledgeable users if your site is actually connected to the Internet. If it is, a link in the network may be temporarily disconnected for maintenance (or by accident.)
* In the case of telnetting to a non-default port (as in the case with the callbook servers), if telnet <host> <port#> doesn't work, but you can telnet to the default login port (ie, no qualifiers), then the manner at which the port qualifier is entered may be system dependent. Also, at many education sites, it is common practice to block telnet connections above TCP socket 1000 or so in a somewhat misguided attempt to block usage of "recreational" TCP socket applications such as Multiple User Dungeons (MUD's) or Internet Relay Chat (IRC). In most cases, a polite word to the system administrators, pointing out the worthwhile services available on sockets 2000 and 3000 will get telnet service unblocked, at least for those ports.
* Syntax for telnetting from different operating systems differ. Some common command syntaxes are: (angle brackets are for

readability, do not type these in literally)
Berkeley Unix or VMS with Wollongong TCP/IP uses syntax:
telnet <host> <socket#>
Other possibilities to try:
telnet console <host> (for 2000 port)
telnet <CR> open <host>:<port#>
telnet <host>/<port#>
telnet <host>/port=<port#> (for Multinet on VMS)
* Compression techniques are different for different operating systems.
However, these hints should help:
foo.sit needs Macintosh UnStuffit to unstuff
foo.hqx needs Macintosh BinHex to uncompress
foo.tar needs Unix or GNU tar utility to extract archived files
foo.Z needs Unix 'uncompress' to uncompress or VMS
compress_vms.exe (on gatekeeper.dec.com) will work too.
foo.z needs the GNU gzip utility (from prep.ai.mit.edu) to
uncompress it. gzip will also uncompress *.Z files.
If more than one method was used,
like for foo.hqx.Z, start at the outside and work in (so uncompress
on Unix with 'uncompress' first, transfer to MacIntosh, then
uncompress with BinHex to get uncompressed file).
* There is an excellent introduction to FTP and archiving software
regularly posted to comp.binaries.ibm.pc and news.answers.
* If all else fails, ASK your system administrator or check system
documentation.

* Access to FTP archives via electronic mail
ANY BITNET, EARN, or NorthNET site can access the Princeton mail
server. It will be most efficient if you know the complete path
and filename for anything you wish to transfer, but you can use
'cd' and 'ls -l' commands to move about and browse the remote site's
directories. The Archie database server may also be useful to search
for files and their directory locations on FTP sites around the world
(see below). Please be patient when using non-interactive mail
servers such as BITFTP as each request may take several hours (or
longer) to be fulfilled.

For access to the FTP server, send email to bitftp@pucc.bitnet (for
BITNET, EARN and NorthNET users ONLY!). Subject doesn't matter.
The text of the email is the FTP commands one after another. For
example, suppose you wanted to access the FTP site lcs.mit.edu:
FTP lcs.mit.edu
USER anonymous
PASS yourname@yoursite (not required)
ASCII
CD telecom-archives
GET filenames
BYE
A help file is available giving detailed instructions by putting
the single word HELP into the text of the email.

For nonBITNET users, there is also a FTPMAIL server at
ftpmail@decwrl.dec.com. Commands include: REPLY <mailaddr>,
CONNECT [HOST [user [pass]]], ASCII, BINARY, COMPRESS, COMPACT,
UUENCODE, BTOA, LS <directory>, DIR <directory>, GET <file>, QUIT,
HELP. Get the help file for more information by sending mail with
the single line "help". The ftpmail site may complain if you try
try to get more than 1 file per email request. Here is an example of
a request:
reply your_name@your_site
connect vixen.cso.uiuc.edu
binary
uuencode
get pub/ham-radio/extra-pool.txt
quit

A note on the use of FTP mailservers: If you want to use FTP
mailservers, like FTPMAIL, please be considerate of any systems that
your mail must pass through. The quickest way to find yourself cut
off from the world is to make the admins of sites that pass your mail
pass 60Mb of X11 graphics system source. If you need large amounts
of information from a mailserver, contact your admin for help -- it
may already be available, or he may know a better way to get it.

* The UCSD Ham-Radio mail list: rec.radio.amateur.misc by mail
You can use rec.radio.amateur.misc even if your site has no NetNews
feed. To subscribe to rec.radio.amateur.misc, send email to:
Ham-Radio-Request@ucsd.edu
In the body of the message, write:
subscribe Ham-Radio
If your local e-mail software does not provide a valid return address
(i.e. Bitnet, many Milnet sites, and many non-Unix e-mail packages)
you can provide your return address between the "subscribe" and the
name of the mailing list (i.e. "subscribe myname@here.org Ham-Radio".)

Similarly, to subscribe to some other rec.radio.* newsgroups, use
the following directions: (all addresses here are @ucsd.edu)
Request address List address Newsgroup
Ham-Radio-Request Ham-Radio rec.radio.amateur.misc
Ham-Digital-Request Ham-Digital rec.radio.amateur.digital.misc
Ham-Policy-Request Ham-Policy rec.radio.amateur.policy
Ham-Equip-Request Ham-Equip rec.radio.amateur.equipment
Ham-Ant-Request Ham-Ant rec.radio.amateur.antenna
Ham-Homebrew-Policy Ham-Homebrew rec.radio.amateur.homebrew
Ham-Space-Request Ham-Space rec.radio.amateur.space
Radio-Info-Request Radio-Info rec.radio.info

IMPORTANT NETIQUETTE NOTE: never ever send a request to subscribe
or unsubscribe from *any* mail list to the list itself. Always use
the REQUEST address. Otherwise you'll end up broadcasting your
request to everyone on the list and getting lots of people angry at
you. (Seriously - this is a completely avoidable mistake and it
does irritate a lot of people.)

TO UNSUBSCRIBE, follow directions above, changing the command word "subscribe" to "unsubscribe"
DON'T POST TO THE NEWSGROUP ITSELF! USE THE REQUEST ADDRESS!
Help is available by using the command word "help". Note that command words MUST be the first word on each line of the message.

You can post to rec.radio.amateur.* by sending your posting email to the mail list addresses at ucsd.edu. Since rec.radio.info is a moderated newsgroup, requests to post to it may be sent to Radio-Info but they will be mailed to the moderator, rec-radio-info@ve6mgs.ampr.ab.ca, for posting.

All of the Amateur radio newsgroups are archived for FTP on ucsd.edu under subdirectory mailarchives/{mail-list-name}. However, Radio-Info is not archived at UCSD because almost everything is either on one of the other lists or in the news.answers archives at rtfm.mit.edu (see also funic.funet.fi above).

To subscribe to rec.radio.shortwave, send email to listserv@cuvma.columbia.edu, message is "subscribe swl-l (your name)"

* Telephone BBS's with Ham-related information
Among many, a large one is WB3FFV. Use 8/N/1. The phone numbers are
(410)-661-2475 1200-38400/MNP5/V32bis/V42bis
(410)-661-2598 1200-38400/MNP5/V32bis/V42bis/PEP
(410)-661-2648 1200-19200/MNP5/V42bis/PEP
Login is bbs, no password. This BBS is also available via UUCP, login is uucpanon, no password. For a list of available files, try:
uucp wb3ffv!~/FILES /usr/spool/uucppublic

Another one is N8EMR at phone 614-895-2553, login hbbs. Data settings are 8 bits, NO parity, 1 stop bit. N8EMR has a comprehensive list of other ham-related BBS's on-line.

ARRL has a BBS called "HIRAM", named after the League's founder. The number is 203-666-0578. More information can be obtained from the file ARRL-BBS on the ARRL e-mail server.

For a more complete list of Ham Radio BBS's, see the file BBS on the ARRL server. See also the file BBS_LIST.TXT on the KA6ETB HAM-server. Also see many of the FTP sites listed earlier in this section. There is now way to keep a list like this anywhere near up-to-date so giving you a lot of sources is the next-best thing!

* Callsign servers and geographical name servers
We know of online callsign servers for the USA, Canada and UK.

If you are at an Internet site you can connect using telnet to the following callbook server (covering the USA and Canada):
callsign.cs.buffalo.edu

There is also a general geographical name server at
martini.eecs.umich.edu

For the UK, you can use a WWW client to access the following URL:
http://www.mcc.ac.uk/htbin/callbook

The callbook server sits on port number 2000 and the geographical name server sits on port 3000. These are different port numbers than what telnet usually defaults to. So if you just telnet to these machines, you will get a login prompt instead of the server. How you tell your telnet program to connect to port 2000 or 3000 instead of the default port is operating system dependent but it is usually done with a line like

telnet callsign.cs.Buffalo.edu 2000

If this doesn't work, check the telnet/FTP troubleshooting hints above or consult your local systems guru for the proper command string.

The interactive servers are designed to be somewhat self-explanatory and they support fairly detailed help facilities. The first command you should execute when connecting to one of these servers is "info". This will list general info about that server and how to use it. You should then type "help" to list the various commands available. Typing "help" followed by a command name will give you a little more detail about that command. Servers allow searches by call, last name, zip code or city and also provide regular expression filters to trim your searches so you get a reasonable amount of output.

Both these servers are built from a database distributed by Rusty Carruth, N7IKQ. This database currently contains US and Canadian callsigns and it does not contain club calls. A new version of the database is sent around approximately once a year.

There is also an email callsign server at callbook@sat.datapoint.com (The UUCP address is ...!uunet!dptspd!callbook). In the body of the text, say "lookup" followed by callsigns you want to look up. If your mailer appends signature files, you should put a line "quit" at the end of your request (before the signature file). If you want help, put the word "help" on a line by itself. Here is what a request might look like:
help
lookup kc1sp wn4bbj
lookup n0fzd
quit

There is another email callsign server at callbook@n8emr.cmhnet.org. The subject line is the list of callsigns to lookup. All other lines are ignored. This same callsign server can be accessed with packet radio via cbook@n8jyv.#cmh.oh.usa.na. The body of the message should include "REPLY n8jyv!HOME_BBS!CALL" (where HOME_BBS is YOUR home BBS, and CALL is YOUR callsign), carriage return, "CALL call1 call2 ..." (where call1 call2 .... is space separated list of callsigns you want to lookup).

If you are a packet radio station, callserver data is available from REQQTH@WA4ONG.VA.USA.NA, subject line should be up to 5 US callsigns,

separated by spaces. For Canadian calls, use the callserver at
REQQTH@VE3JF.ON.CAN. Body of message is ignored. The server is an
OS interface to the MBL packet BBS using the Buckmaster CD-ROM
callsign database.

The FCC "call sign hotline" at 717-337-1212 is available for those
who wish to listen to the call signs allocated in each group for each
district. This requires only a touch-tone telephone to use.

* FTP access to FCC Part 97 and FCC Amateur Radio question pools
Part 97 is part of the FCC regulations and only applies to the USA.
As of 1/94, a current copy can be found at ftp.cs.buffalo.edu in
the /pub/ham-radio directory.

An ASCII copy of the question pools are available by ftp from
the ARRL e-mail server.

* Lists of radio modifications and extensions
[see also rec.radio.amateur.equipment]
The largest collection of mods data that we know about is kept at
ftp.cs.buffalo.edu in the /pub/ham-radio/mods directory. The
maintainer of this archive strongly encourages all existing
archivers of mods to mirror their collections on this site.
in this way, maintainers will come and go, but the collection
of mods will remain stable and accessible.

There is a packet radio Mods Server. To get the directories, send
a packet as follows:
SP REQFIL@N2IMC.NJ.USA.NA
Subject: MODS\Dir.1
/EX
To get the mod, send to same place, with Subject MODS\Filename.ext.

REMEMBER that any modification is likely to void your warranty and
that these mods are NOT guaranteed to work. This list is supplied
here because it is a frequently-asked question on the newsgroup.

** Can I send ARRL or W5YI electronic mail?
Several ARRL HQ staffers can be contacted via the net. Their e-mail
addresses are available from the ARRL e-mail file server in the
file called "EMAIL".

ARRL requests that you include your postal address (the slow kind) in
case they need to send you nonelectronic material in answer to your
request.

W5YI, a large VEC, can be reached at the following address:
Fred Maia, W5YI 3511297@mcimail.com

** "Why doesn't the ARRL do...?"
If you want the ARRL to do something, tell them! Direct input from a
concerned member (or, actually, any concerned Ham) carries a lot more
weight than hearsay from any source. Their e-mail addresses are

available from the ARRL e-mail file server (see above). They want direct input - that's why those addresses are available.

** What magazines are available for Ham Radio?
Your local ham store may have some, but here's some popular ones (this is NOT a complete list!):
QST, ARRL, 225 Main St, Newington, CT 06111 - basic projects and contesting
CQ The Radio Amateur's Journal, 76 North Broadway, Hicksville, NY 11801 - beginner ham radio articles
73 Amateur Radio Today, WGE Center, Forect Rd, Hancock, NH 03449, FAX (603) 525-4423, email: COMPUSERVE 70310,775 or Internet 70310.775@compuserve.com - more technical ham radio articles
QEX, ARRL, 225 Main St, Newington, CT 06111 - more technical projects
WorldRadio, 2120 28th St, Sacramento, CA 95818, (916) 457-3655. Subscriptions to 201 Lathrop Way, Ste D, Sacramento, CA 95815, (800) 365-SUBS - lots of special interest columns, like QRP, ATV, YL, etc.
W5YI Report, PO Box 565101, Dallas, TX 75356, 1-800-669-9594 - up-to-date information on Amateur Radio happenings, including VE information and statistics

** How do I use the incoming and outgoing QSL bureau?
To use the outgoing QSL bureau, you must be a member of ARRL. In general, you send a bundle of foreign (not States!) QSL cards to the outgoing bureau in Newington, Connecticut, along with a label off of your QST magazine (which shows ARRL membership), along with $2 per pound of cards (approximately 150 cards) or $1 for 10 cards or less.

To use the incoming QSL bureau, you do NOT have to be a member of ARRL. Send one or more Self-Addressed Stamped Envelopes (size 5x7 or 6x9, NO BIGGER, NO SMALLER) with one ounce of postage attached and with your callsign in 3/4" letters in top left hand corner where the return address label would go. If you expect a large quantity of foreign QSL cards, attach extra money or postage with a paper clip; do NOT affix extra postage to envelope. Send the envelopes to the QSL bureau for your callsign area. If your callsign is xx3xxx/5, you would send it to the 3rd call area, NOT the 5th call area. Addresses for QSL bureaus are listed in QST and on the ARRL e-mail server (see below); if you don't have access to a QST magazine, ask another ham. IMPORTANT: BE PATIENT! Turnaround time for a US QSL bureau, not considering foreign QSL bureaus, is about 3 months. Foreign QSL bureaus and hams can be as fast as 2 months or as slow as TEN YEARS, while average is about 6-12 months.

Addresses for the US incoming and outgoing QSL Bureaus are available from the ARRL e-mail server in the files called "QSL-IN" and "QSL-OUT". See the question above

** Are there any news groups for CAP?
There is no news group just for Civil Air Patrol discussions. However,

rec.aviation.misc is appropriate for CAP aviation discussions and for
CAP radio information, these rec.radio.amateur.* groups are available.
CAP-related files are also stored on the FTP site
sunburn.cps.udayton.edu in pub/capital.

** What's the name of the QRP club that issues QRP numbers?
QRP Amateur Radio Club International, c/o Bill Harding K4AHK,
10923 Carters Oak Way, Burke, VA 22015.

See also the file QRP-ADDRESSES on the ARRL e-mail server.

** How do I become a 10-10 member?
10-10 is simply an organization to sponsor the use of the 10 meter
band. It was first conceived when propagation was poor on 10 meters,
as a method to get more hams to use 10 meters. The past few years
have been great for 10 meters worldwide. However, "the bands are
closing down" again, and 10 meters will once again be limited more
for local communications, except for sporadic band openings, until
the next sunspot cycle.

To join 10-10, work ten 10-10 members and LOG each 10-10 number, call
sign, operator's name and location. Send the list to your numeric
call sign or DX area manager (as shown below), with $5.00 U.S. new
membership registration fee ($6.00 for foreign addresses).

10-10 International Area Managers:
USA 1 - Al Kaiser N1API, 194 Glen Hills Rd, Meriden, CT 06450
USA 2 - Larry Berger WA2SUH, 9 Nancy Blvd, Merrick, NY 11566
USA 3 - Chester Gardner N3GZE, 9028 Overhill Dr, Ellicott Cty,MD 21042
USA 4 - KY, TN, FL, VA, NC, SC only
Rick Roberts N4KCC, 7106 Ridgestone Dr,Ooltewah, TN 37363
USA 4 - GA, AL, Puerto Rico only
Jim Beswick W4YHF, 112 Owl Town Farm, Ellijay, GA 30540
USA 5 - Grace Dunlap K5MRU,* Box 445, LaFeria, TX 78559
*summer addr Jun-Oct Box 13, Rand, CO 80473
USA 6 - Dick Rauschler W6ANK, 4371 Cambria St, Fremont, CA 94538
USA 7 - Willie Madison WB7VZI, 10512 W Butler Dr, Peoria, AZ 85345
USA 8 - John Hugentober N8FU, 4441 Andreas Ave, Cincinatti, OH 45211
USA 9 - Jim Williams N9HHU, 240 Park Rd, Creve Coeur, IL 61611
USA 0 - Debbie Peterson KF0NV, RR 1 Box 35, Duncombe, IA 50532
All DX- Carol Hugentober K8DHK,4441 Andreas Ave, Cincinatti, OH 45211

For more info, see the file 10-10-INFO on the ARRL e-mail server.

** How do I join MARS?
To join MARS, you have to be 14 years or older (parental consent
required under age 17), be a US citizen or resident alien, possess a
valid Amateur Radio license, possess a station capable of operating
on MARS HF frequencies, and be able to operate the minimum amount
of time for each quarter (12 hours for Army and Air Force; 18 hours
for Navy-Marines). Novices must upgrade to Technician within 6
months, else be dropped from MARS. No-Code Techs can apply, provided

they have transmit and receive HF capability for MARS frequencies (they don't need transmit capability for Amateur HF frequencies). For application forms contact:

Chief, Air Force MARS
HQ AFC4A/SYXR
203 W. Losey St. Room 1020
Scott AFB, IL 62225-5219
(618)256-5552 Fax: (618) 256-5126

Chief, US Army MARS
HQ USA Information Systems Command
ATTN: ASOP-HF
Ft. Huachuca, AZ 85613-5000
800-633-1128

Chief, Navy-Marine Corps MARS
Naval Communication Unit
Washington, DC 20397-5161

** How do I join RACES?
Contact your nearest Civil Defense or Emergency Management Agency. The Radio Amateur Civil Emergency Service is a part of a municipal, county, or state government. This does not mean, however, that every such government has a RACES program. If your government does not have a RACES, ask them to refer you to the nearest jurisdiction that does have a RACES program.

** What organizations are available to help handicapped hams?
Courage Center
Handihams
2915 Golden Valley Rd
Golden Valley, MN 55422
(612) 520-0515
ARRL has a Handihams information package (get it by requesting it through 2155052@mcimail.com) and a book called "The ARRL Plan for the Disabled", available at no charge from the ARRL Regulatory Information Branch.

** I am looking for a specific ham, can anyone help me find him?
Rather than sending out a message on Usenet, you might first try the "Radio Amateurs on Usenet" listings, maintained and posted by Mark Salyzyn VE6MGS. The articles can be found monthly on rec.radio.info and rec.radio.amateur.misc. If the copy in your news spool has expired for some reason, you can look up an entry in the list by sending an e-mail to reqnet@ve6mgs.ampr.ab.ca with either of the following commands in the body of the message:
lookup keyword keyword keyword ...
return user@machine.subdomain.domain
(Fill in the proper info for the search keyword or e-mail address.)
An automated server program will reply to your message.

If you have his/her callsign or name, you should also try one of the on-line callservers shown above. This works in most cases. (!!!)

Also try directory assistance from the phone company or the locator service provided by the Salvation Army. A Salvation Army post in your local area may be able to help you. Also, the Quarter-Century Wireless Assn maintains a collection of callbooks going back to "the beginning of time". Their address is: 1409 Cooper Drive, Irving, TX 75061. Also, the Callbook has a dial-in line for accessing new ham callsigns. Try (1-708-234-8011) at 2400 baud.

** Can I post my neat new ham related program on rec.radio.amateur.misc?
This is really not a good idea, since many of the readers receive these newsgroups as mail digests. Posting is also a one-shot thing. If you post and someone missed it, it is gone. A better way would be to announce the existence of your program here, along with information on how to obtain a copy of your program. You can also submit it to one of the FTP archive sites, which will allow the world to access it without you having to mail it to each requestor. If you just GOTTA post it somewhere, post it to more appropriate groups, like comp.sources.unix or alt.sources or comp.binaries.ibm.pc.

** Where can I get ham radio software for my computer?
See the information about Anonymous FTP, e-mail servers, and ham-related telephone BBS's above. For PC-clones, see the KA6ETB HAM-server. For Macintosh computers, see the file SOFTWARE-MAC on the ARRL e-mail server for locations to look.

** Are there Dialup News services or BBSs for Amateur Radio?
There are two major news services for ham radio. Both are run by volunteer hams and provide bulletins of specific interest to amateurs, hence they are perfectly legal to rebroadcast on ham bands according to FCC Regulation 97.111B(6). To lessen the load on the dialup lines, consider getting your local repeater operator to rebroadcast it, or tape record it to play at your favorite HF net.

RAIN (Radio Amateur Information Network) is produced by Hap Holly, KC9RP, located in Illinois. The news is typically updated 8am CST Fridays. Phone numbers are 1-708-299-INFO (299-4636) and 1-708-827-RAIN (827-7246).

NEWSLINE is another, produced by Bill Pasternak, WA6ITF. Donations for NEWSLINE are accepted at Newsline Support Fund, c/o Dr. Norm Chalfin K6PGX, Pasadena, CA 91102. Phone numbers are:
Chicago 1-708-289-0423
N.Florida 1-407-259-4479
West Palm Beach 1-407-965-1234
Los Angeles 1-805-296-2407 (Instant Update Line)
Los Angeles 1-213-462-0008
NYC 1-718-353-2801
Ohio 1-513-275-9991
Seattle 1-206-368-3969

** Where can I find VE sessions in my local area?
VE sessions are often announced in the local newspapers, but more
often, they are announced by local radio bulletin boards. The
local packet BBS will most likely have a monthly updated schedule
for VE sessions. ARRL or W5YI can generally be called and asked for
local VE sessions as well. Don't forget that you will need the
following when you go in for an upgrade: a copy of your current
Amateur license; your original Amateur license; any CSCEs (duplicate
not required), if applicable and less than a year old; a picture ID,
preferably a driver's license, passport or visa; and the VE test
fee (approximately $5 right now).

Bart Jahnke, KB9NM, the ARRL VEC Manager (bjahnke@arrl.org) posts a
listing of VE exams indexed by state (and some overseas sites, usually
at embassies and military bases) to the net every 6 weeks or so. The
same list can be obtained from the ARRL e-mail server under the file
EXAM-SCHEDULE. Another file of interest is EXAM-INFO.

The ARRL list is the definitive list for ARRL VEC sessions. There
are other smaller VECs around the USA. ARRL includes their schedules
when the info is available. The other VECs phone numbers are listed
with the ARRL info so you may wish to give them a call to check their
schedule if they didn't provide it to ARRL.

** Why isn't XXX available electronically?
This is a theme for a lot of common questions. For the "XXX" above,
substitute any of the following:
Callbooks
DX QSL Lists
Radio station lists
various publications
and more...

Except for the Callbook (via callsign servers), these are not available
because of any of several reasons. Either there are copyright restric-
tions, royalty fees, or the source just may not have done the work.
Also, not everyone that has information has reliable UseNet access.

** I'd like to volunteer to help ham radio through electronic
information services like those mentioned in this FAQ list.
Where should I start?
This FAQ would not be complete without a reminder that useful
resources on the net do not grow on trees, they are the work of
many dedicated volunteers. The rec.radio.amateur.* newsgroups
are very fortunate to have quite a number of such volunteers
providing everything from FAQ lists to telnettable callsign
servers. This doesn't mean, however, that there isn't room for
more information and services from additional volunteers. One
such service would be more detailed FAQ lists for the recently-
-created special-interest rec.radio.amateur.* newsgroups (such
as those for antennas, homebrew electronics, equipment and
ham radio in space) to supplement this general FAQ.

Recently an electronic mailing list for amateur radio FAQ maintainers, archive custodians, service providers, and other volunteers was set up. It is the rec.radio.amateur.* Working Group (rra-wg). Anyone with a sincere interest is welcome to subscribe by sending E-mail to rra-wg-request@amdahl.com. The readers of that forum would be more than happy to provide advice and guidance with regard to an existing information project, or even suggest a new one to fill a currently-unmet need.

2902. rec.radio.amateur.misc Frequently Asked Questions (Part 3 of 3)

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-22 06:12:31 UTC

Rec.radio.amateur.misc Frequently Asked Questions
Part 3 - Amateur Radio Advanced and Technical Questions
------------------------------------------------------------------------------

Questions discussed in Part 3: (dates indicate last modification)
** What are the different US amateur classes and what can each of them do?
(pre-4/92)
** What is the best way to learn Morse Code? (10/92)
** What is the standard for measuring Morse code speed? (pre-4/92)
** What is the standard phonetic alphabet? (10/94)
** I'm confused. What do all those abbreviations mean??? (6/93)
** What do all those "tones" mean? (pre-4/92)
** Where can I learn more about Amateur Radio if I live outside the US?
(9/93)
** How can I get a "reciprocal license" if I am a licensed ham from another
country or if I am a FCC licensed ham who wants to operate in another
country (on vacation)? (9/93)
** My apartment or housing complex does not allow outdoor antennas, now what
do I do? (9/93)
** I got TVI...HELP!!! (9/93)
** On what frequencies do JPL and GSFC retransmit the shuttle audio?
(10/92)
** Can I take my HT on an airplane and operate it if I get the permission
of the captain? (4/92)
** How do I modify my current Amateur license? (9/93)
** I'm confused about XXX, should I ask the FCC? (9/93)
** Is there any information on antique radios? (pre-4/92)
** Where can I buy vacuum tubes? (9/93)
** What do I need to get started in packet radio? (9/93)
** What do I need to get started in satellite communications? (9/93)
** What is available to get started in ATV, SSTV and WEFAX? (9/93)
** What are these contests I sometimes hear, and how do I participate? (9/93)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 3--

** What are the different US amateur classes and what can each of them do?
Novice - has CW (Morse code) privileges on 4 HF bands (80, 40, 15,
and 10 meter), Voice privileges on 10 meters, and privileges
on 2 VHF/UHF bands (220 MHz and 1290 MHz).
Required are 5 wpm Morse code test and 30-question Novice test.
```

Technician - has full privileges on all VHF/UHF bands above 30 MHz.
Required are Novice test and 25-question Tech test.
Technician may access Novice HF bands by passing the 5 wpm Morse
code test.
General - has all Technician privileges, plus larger access to more
HF bands, including CW and Voice on 160, 80, 40, 30, 20, 17, 15,
12, and 10 meter bands. A General class amateur can give Novice
tests.
Required are 13 wpm Morse code test, Novice, Tech and 25-question
General test.
Advanced - has all General privileges, plus wider band access on 80,
40, 20, and 15 meter bands. An Advanced class amateur can
also become a VE and give tests to Novice and Tech tests.
Required are 13 wpm Morse code test, Novice, Tech, General and
50-question Advanced test. The Advanced test is the most difficult
of the five written tests.
Amateur Extra - has full privileges on all amateur bands. An Extra
can become a VE and give all amateur tests.
Required are 20 wpm Morse code test, Novice, Tech, General,
Advanced and 40-question Extra test.

** What is the best way to learn Morse Code?
This is becoming an increasingly common question as many "no-code"
Technicians realize they can add more privileges to their license if
they learn Morse Code. The following list of suggestions should
be helpful in finding ways to approach the effort.

* Listen to code at a rate faster than you can copy.
* Participate in Novice-Roundup and/or Field Day. Practice whenever
you get the chance!
* Avoid the "deciphering" plateau around 5 WPM and and character
plateau at 10 WPM by listening to the fast Farnsworth-paced
"beat" of each letter and the "beat" of common words. (See the
question on Morse code speed for more information on Farnsworth
pacing.)
* Practice to develop a "copy buffer" so you copy about 5 characters
behind. (This is not easy but it's how the higher speeds are done.)
* Practice both with headphones and "open-air" copy as the code test
may be in either format. (If you only practice one, you may fumble
on the other.)
* Most of all, don't give up! Recognize when you reach plateaus
and keep trying until you break through them.

** What is the standard for measuring Morse code speed?
The word PARIS was chosen as the standard length for CW code speed.
Each dit counts for one count, each dash counts for three counts,
intra-character spacing is one count, inter-character spacing is three
counts and inter-word spacing is seven counts, so the word PARIS is
exactly 50 counts:

```
PPPPPPPPPPPPP AAAAA RRRRRRRRR IIIII SSSSSSSSS
. - - . . - . - . . . . . .
1 1 3 1 3 1 1 3 1 1 3 3 1 1 3 1 1 3 1 1 1 3 1 1 1 1 1 7 = 50
^ ^ ^
^Intra-character ^Inter-character Inter-word^
```

So 5 words-per-minute = 250 counts-per-minute / 50 counts-per-word or one count every 240 milliseconds. 13 words-per-minute is one count every ~92.3 milliseconds. This method of sending code is sometimes called "Slow Code", because at 5 wpm it sounds VERY SLOW.

The "Farnsworth" method is accomplished by sending the dits and dashes and intra-character spacing at a higher speed, then increasing the inter-character and inter-word spacing to slow the sending speed down to the desired speed. For example, to send at 5 wpm with 13 wpm characters in Farnsworth method, the dits and intra-character spacing would be 92.3 milliseconds, the dash would be 276.9 milliseconds, the inter-character spacing would be 1.443 seconds and inter-word spacing would be 3.367 seconds.

** What is the standard phonetic alphabet?
Though no standard phonetics are required on amateur radio, good operating procedures include using the standard phonetic alphabet to help communicate more clearly. The recommended phonetics are those also in use by aviation (internationally by ICAO treaty) and some militaries (in most English-speaking countries.)
alfa bravo charlie delta echo foxtrot golf hotel india juliet kilo lima mike november oscar papa quebec romeo sierra tango uniform victor whiskey x-ray yankee zulu

The numbers are spelled differently to suggest a particular pronunciation. Also, nine was changed to "niner" to avoid confusion with the German word "nein" for "no", though that change is not commonly used by Hams. (Usually you'll only hear "niner" from Hams who are also pilots.)
zero one two tree fower fife six seven eight niner

When first making contact with another Ham, it is a good idea to say callsigns in phonetics to give the other side a better chance of understanding them correctly.

See also: http://aviation.jsc.nasa.gov/alphabet.html

** I'm confused. What do all those abbreviations mean???
AM Amplitude Modulation
AMSAT Amateur Satellite Corporation [see rec.radio.amateur.space]
AMTOR Amateur Teleprinter Over Radio. A more sophisticated version of RTTY. Also used commercially as SITOR (Simplex Teleprinter Over Radio). [see rec.radio.amateur.digital.misc]
ARRL American Radio Relay League
ATV Amateur Television - a way to see who you're talking to!
CAP Civil Air Patrol is a volunteer organization that searches for downed aircraft and missing kids and uses frequencies just

outside of the ham bands and often uses modified Amateur radios
CB Citizen's Band radio, this is NOT part of Amateur Radio and
does not require any license to operate [see rec.radio.cb]
CQ An on-the-air request for a conversation with anyone
"dupes" A dupe sheet is a duplicate check sheet, in matrix format, used
to quickly check that you have not had a "duplicate" contact
with someone (on a specific band or mode) in a contest
Elmer An amateur radio mentor, or "Master Craftsman" to a new ham.
Could refer to anyone, regardless of age or gender.
FCC Federal Communications Commission, the "law enforcers"
FM Frequency Modulation
FieldDay A June activity to practice emergency communications for
24 hours....wives call it 'an exercise in male bonding' :-).
HF High Frequency - 3 MHz to 30 MHz
HT Handy-Talky, a shorthand for "hand held radio"
LF Low Frequency - 30 kHz to 3 MHz
MARS Military Affiliate Radio System, military affiliated Amateurs
who provide free communications for overseas GIs and other
Federal services. MARS operators are licensed under DoD
instead of FCC.
NTS National Traffic System, a way to send radiograms
OF Old Friend, or Old F#$%, used to denote an older ham
OM Old Man, refers to any ham, including female hams
packet computer bulletin boards/electronic mail via Amateur Radio
[see rec.radio.amateur.digital.misc]
PRB Private Radio Bureau, administers Amateur and CB services
QSO One of the Q signals used in Morse code to mean "conversation"
QCWA Quarter Century Wireless Association, membership means you've
been a ham for more than 25 years
RTTY Radio Teletype - older form of computer communications on HF
[see rec.radio.amateur.digital.misc]
SAREX In Amateur Radio talk, Shuttle Amateur Radio EXperiment, a
chance to talk to astronauts in space. In CAP talk, Search
and Rescue EXercise, practicing for the real thing.
[see rec.radio.amateur.space]
SK Silent Key, a nice polite way to say a ham has passed on "to
that great antenna farm in the sky"
SSB Single Side Band - need less band width than AM or FM
SSTV Slow Scan TeleVision - REALLY slow, low data rate, typically
used on the lower frequency bands
SWL shortwave listening [see rec.radio.shortwave]
UHF Ultra High Frequency - 300 MHz and above
ULF Ultra Low Frequency - 30 Hz to 300 Hz
VHF Very High Frequency - 30 MHz to 300 MHz
VLF Very Low Frequency - 300 Hz to 30 kHz, audio frequencies
WARC World Administrative Radio Conference, a summit meeting that
occurs every few years, required by international treaty to
determine how the spectrum get sliced up to all vying
communications services (last one was in 1992)
XYL eX-Young Lady, or wife

YL Young Lady, non-ham girlfriend or female ham
2m Shorthand for "2 meters" (144-147.995 MHz), which is a reference to the wavelength of a common Amateur frequency band used for local communications

** What do all those "tones" mean?
Sub-Audible Tone: A low tone that you're not supposed to be able to hear. It's used as a "PL Tone." PL is "Private Line", a trademark of Motorola for their implementation of CTCSS (Continuous Tone Coded Squelch System). Basically, the transmitter sends the signal with the Sub-Audible tone and the receiver only opens when it hears signals with that tone. Signals without the proper tone are ignored. This is useful for "closed" repeaters, or for repeaters on the same frequency that have overlapping geographic areas.
Tone encode refers to the feature of providing the tone on transmit.
Tone decode refers to the feature of responding to the tone on receive.
Tone squelch refers to all of the above. DTMF refers to Dual Tone Multi-Frequency, or "Touch Tone" which is a trademark of AT&T. DTSS probably means Dual Tone Squelch System and refers to the feature of providing a predefined sequence of Touch Tone digits to open the repeater for transmit. DTSS is an alternate method from CTCSS, which provides a way to use a "closed" repeater even if your radio doesn't do Sub-Audible Tones.

** Where can I learn more about Amateur Radio if I live outside the US?
First, check if there is a Ham Radio-related newsgroup specific to your country. See the country-specific newsgroups in "the rec.radio.* newsgroups" in Part II of this FAQ.

Also, write to the ARRL and ask. They can usually tell you how to get a license in your country. See also the ARRL e-mail server. (Details are in Part 2.)

If you know of any location where this information is available electronically, whether by an e-mail server, anonymous FTP, or a contact person, please mail it to us so we can include it here. Send it to hamradio-faq@amdahl.com.

** How can I get a "reciprocal license" if I am a licensed ham from another country or if I am a FCC licensed ham who wants to operate in another country (on vacation)?
Editor's note (11/92): the regulations affecting this question are being changed. Contact your local Volunteer Examiner (VE) and ask about a VE 60-day pass. More details will be included in future revisions of the FAQ.

This paragraph is soon to be obsolete:

You need to submit a FCC Form 610-A to the FCC, PO Box 1020, Gettysburg, PA 17326. They will then send you a reciprocal permit for alien amateur licensee (FCC Form 610-AL). You must be a citizen of a country with which the United States has arrangements to grant

reciprocal operating permits to visiting alien Amateur operators.

This information is still current:

For FCC licensed hams operating abroad, the following guidelines
apply:
* A reciprocal license is required in all foreign countries (that have
a reciprocal operating agreement with the US), except Canada, where
the FCC license is automatically valid.
* Send a SASE to ARRL Regulatory Information Branch, telling them
which country you are going to visit and they will send you the
info and an application form. Foreign hams can likewise request
information from their national Amateur radio society.
* Submit your application with a certified copy of your Amateur
license (ie, notarized copy), and fee if applicable (use a bank draft
of a bank that does business in that country) to the appropriate
licensing administration of the foreign country. Processing may
take 30 to 90 days.
* If less than one month, you could try sending the application and
pick up the permit upon arrival in that country.
* Most countries will not allow you to bring communications equipment
into their country without a license or permit. If you applied, but
haven't received the permit yet, show the copy and your FCC license
to the customs officer, however, the equipment may still be held at
customs until your departure.
* Be sure to use only those frequencies covered by your FCC license
which are also used in the foreign country, unless otherwise
authorized.

See also the file RECIP-OP on the ARRL e-mail server. (See Part 2.)

** My apartment or housing complex does not allow outdoor antennas, now what
do I do?
[see also rec.radio.amateur.antenna]
First of all, don't despair. Many hams have similar problems. Many
books offer advice for the growing group of hams that cannot put up
antennas. Some options are:
* Install an "invisible" antenna made of magnet wire.
* Disguise an antenna as a flag pole.
* Install an antenna in the attic.
* ASK the apartment manager. You may find they will let you put up
something as long as it "is invisible" or "doesn't disturb your
neighbors" or "doesn't attract lightning".
* Operate primarily from your car.
* If the restriction is due to local ordinance, you may have relief
via PRB-1. Meet with the local government and seek an informal
compromise. It is possible to win in court...but it's expensive and
time consuming.
* If you are restricted by "covenants" attached to the deed of your
home, your options are severely limited. Covenants are considered
to be private, voluntary contracts between individuals and are

outside of the intended application of PRB-1. In many cases, you
can petition the Homeowner's Association for an exception. Sometimes
you can win in court on the basis that other violations of the
covenants by others without action taken constitutes abandonment
of the agreement.
* For further information, contact the General Consel's office of the
ARRL, 225 Main St, Newington, CT 06111.

See also the file ANTS-INDOOR on the ARRL e-mail server.

** I got TVI...HELP!!!
Here's some hints on Television interference, but this is not a
complete list. There are also books on the subject available from
ARRL.
* If cable TV is an underground feed, look for central distribution
box. Check for a grounding rod.
* Try installing torroids on the cable TV cable close to the TV, and
maybe torroids on the AC cord as well.
* VCRs are notorious for RF leakers, try disconnecting the VCR.
* Check to see if interference is better or worse when cable is
disconnected and you use rabbit ears instead. It could be the
cable company's problem!
* Calling the cable company may get results, since they are also
responsible for RF leakage from their equipment. However, they
are very often obstinate. Good luck! Try some or all of these
suggestions before calling the cable company:
1. Log the interference, noting geographical location, frequency,
and characteristics.
2. Bring it to the cable company's attention in writing, preferably
addressed to "Chief Engineer", or "Technical Staff".
3. Don't be accusatory, instead ask for assistance in resolving
the problem. Try to work it out with someone technically
knowledgeable.
4. Do mention your "licensed radio system", but try not to be too
specific about "ham" or "CB" unless requested.
* Try moving the radio antenna further away from the TV sets. Make
sure the SWR is LOW.

See also the series of files on the ARRL e-mail server on various
aspects of electromagnetic interference. The filenames start with
"EMI-" like EMI-CATVI (cable TV), EMI-GEN (general notes on EMI),
EMI-AUDIO (interference to audio devices), etc.

** On what frequencies do JPL and GSFC retransmit the shuttle audio?
[see also rec.radio.amateur.space]
Station VHF 10m 15m 20m 40m 80m Video
WA3NAN 147.45 28.650 21.395 14.295 7.185 3.860
W6VIO 224.04 21.280 14.282 7.165
K6MF 145.585 7.165 3.840
W5RRR 146.64 28.495 21.350 14.280 7.227 3.850
W6FXN (temporarily out of service - looking for new frequency)

KA9SZX 146.88 426.25
K4GCC 146.94
WA4VME 145.17
W6TRW 145.32

All frequencies are in MHz. Use FM on VHF, USB on 10-20m, LSB on
40-80m.
WA3NAN - NASA Goddard Space Flight Center (GSFC), Greenbelt, MD
W6VIO - NASA Jet Propulsion Laboratory (JPL), Pasadena, CA
K6MF - NASA Ames Research Center (ARC), Moffett Field, CA
W5RRR - NASA Johnson Space Center, Houston, TX
W6FXN - Los Angeles, CA
KA9SZX - Champaign-Urbana, IL
K4GCC - Titusville, FL (near or at Kennedy Space Center)
WA4VME - Melbourne, FL (near or at Kennedy Space Center)
W6TRW - TRW ARC, Redondo Beach, CA (shuttle audio may be overridden
by repeater usage)

** Can I take my HT on an airplane and operate it if I get the permission
of the captain?
Technically, maybe. But don't count on it. In general, you can't use
a radio or scanner on an airline (or charter) *unless* the airline
allows it and the pilot-in-command (PIC) determines that it will not
interfere with the instruments and radios on that specific aircraft.
Very few US airlines allow passengers to use radios so be ready to
disconnect the antenna when you ask. (Don't even ask to transmit.)
For reference (in the US) the pertinent portion of the Federal Aviation
Regulations (FARs) is Part 91, paragraph 91.21.

Due to airport security, you may have a little difficulty carrying the
HT (or any electronic equipment) onto the airplane. Generally, you
can appease the security guards, simply by showing that the unit is
operational and doesn't have a bomb inside. For a radio, just turning
it on and opening the squelch satisfies them. Expect more difficulty
during periods of increased security.

On a private airplane, it is legal to operate an amateur radio if you
have the permission of the PIC. It is still possible for the radio to
interfere with the plane's navigation or communication equipment, so
be sure to ask first. Always obey the requests of the PIC. He knows
his airplane and radios better than you do.

** How do I modify my current Amateur license?
To modify your license (change of address, change of station location,
change of name, renewal, or even change of callsign), submit an FCC
Form 610 to the FCC. Forms are available from the FCC or ARRL or a
local VE session or ham radio store. Do NOT use a photocopy. Check
off the appropriate boxes, fill in the new/changed information, SIGN
THE FORM, and attach a copy of your current license (or a brief letter
of explanation for its absence, ie, "my dog ate it"). NOTE: If you
check the box to change your callsign, YOU WILL GET A NEW CALLSIGN,
even if all you wanted was to supply a new address; if you want to keep

your callsign, DON'T CHECK THAT BOX. Send the form to FCC, POB 1020, Gettysburg, PA 17326. Turnaround time (for CURRENT licensees only) is about 2-4 weeks.

ANY ham can apply for a new callsign (this is different from the past where you can only get a new callsign if you move or upgrade). You can't specify WHICH ONE you want, a new one comes from the same pool as new licensees for that class of license. The callsign is based on your mailing address. For overseas military and civilians, be sure to specify a station location that is within FCC jurisdiction.

New licenses are for 10-year terms. If you apply for renewal before its expiration date, the expired license is valid for 60 days after expiration to allow for the new license to arrive. You have up to 2 years after expiration (5 years for an old 5-year license) to renew before re-examination is required (but you can't operate with an expired license). You will lose your current callsign after 1 year after expiration if you don't renew.

For more information on FCC Form 610, see the file FCC-610-INFO on the ARRL e-mail server. (See Part 2 for details.)

** I'm confused about XXX, should I ask the FCC?
[see also rec.radio.amateur.policy]
Whatever "XXX" is in this case, the overwhelming ARRL and net opinion is a resounding "NO!", at least not as a first step. Amateurs are generally very law-abiding people and have historically written the FCC asking for clarification on some operating practice or another. This is a very dangerous practice, for several reasons.

Most amateur radio regulations (contained in Part 97) are generally very loosely-worded, so as not to restrict experimentation and new techniques. But asking the FCC for a clarification will set in motion the process of "clarifying" it for everyone (i.e. new rulemaking.)

Examples of such restrictive rulings include varying topics like when Hams can help non-profit agencies or effectively forcing packet BBS sysops to screen messages before forwarding them. They were the result of well-intentioned questions by Hams that forced the FCC to make a ruling where they previously allowed the amateur radio community to police itself.

Under all circumstances, it is better to first read the rules yourself. Then, if there's a problem, ask your national amateur radio organization (such as the ARRL in the US) which can give qualified advice about interpretation of FCC regulations. Organizations like the ARRL also have the influence to ask the FCC informally, without forcing a ruling.

Even if asking the FCC doesn't result in a restrictive ruling, it is generally a good idea to not overburden an under-staffed and under-funded government agency with a lot of correspondence. The Amateur Radio Service has traditionally been a low-workload "hands-off" service, and has enjoyed a wide latitude from the FCC. Please don't

ruin this image for your fellow amateurs.

For more discussion on how and when to contact the FCC, see the file FCC-CONTACTING on the ARRL e-mail server. (See Part 2 for details.)

** Is there any information on antique radios?
Antique radio classifieds: ARC, PO Box 802-B6, Carlisle, MA 01741 - old radios, TVs, ham equipment, 40s and 50s radios, telegraph, books, etc.
Hallicrafter Service manuals: Ardco Electronics, PO Box 95, Dept Q, Berwyn, IL 60402
Antique Wireless Association, Bruce Kelley, W2ICE, Route 3, Holcomb, NY 14469 - sponsors the Wireless Museum

** Where can I buy vacuum tubes?
Kirby, 298 West Carmel Drive, Carmel, IN 46032 (1-317-843-2212)
Antique Electronic Supply, Box 1810, Tempe, AZ 85281 (1-602-894-9503)
Fair Radio Sales, Box 1105, Lima OH 45802
Fala Electronics, Box 1376-1 Milwaukee, WI 53201
Southern Radio Supply, 1909 Tulane Ave, New Orleans, LA 70112 (10504-524-2343)

See also the file VACUUM-TUBES on the ARRL e-mail server. (See Part 2)

** What do I need to get started in packet radio?
[see also rec.radio.amateur.digital.misc]
Packet radio is a digital form of communication using radios. There are OTHER digital forms, as well, like CW, RTTY and AMTOR. To use packet radio, you'll need a radio (2 meters and 70 centimeters are most popular), a box that converts radio signals to digital signals that a computer can understand (called a TNC or terminal node controller) and a computer or terminal. For some computers or TNCs you may need special software as well. However, most TNCs and computers get along quite well with just a terminal emulator software package. Most personal computers can be interfaced to use with packet radio. Since there are many digipeaters, generally even an HT will work with packet radio.

Your first source of information on Packet Radio should be the rec.radio.amateur.digital.misc newsgroup. It has its own regularly-posted FAQ that goes into much more depth on the subject than this one can. See also the mailing list and archives info in Part 2.

For more information on packet radio, you might try TAPR (Tucson Amateur Packet Radio), PO Box 12925, Tucson, AZ 85732 (602-749-9479).

See also the files PACKET-INTRO, PACKET-NEW, and PACKET-GLOSSARY on the ARRL e-mail server or the directory /hamradio/packet on the KA6ETB e-mail HAM-server. (See Part 2.)

** What do I need to get started in satellite communications?
[see also rec.radio.amateur.space]
For more information about Amateur Satellite Communications, try

AMSAT (Radio Amateur Satellite Corporation), PO Box 27, Washington, DC 20044 (301-589-6062). They also have an international net on Sundays on 14.282 MHz at 1900Z.

ARRL publishes a book on this subject: The Satellite Experimenter's Handbook. Ham Radio stores in your area may either have it or be able to order it. Or you can order it direct from ARRL.

See also the contents of the directory /hamradio/satelite on the KA6ETB e-mail HAM-server. The ARRL e-mail server has a bibliography on satellite materials in the file SATELLITES-B.

** What is available to get started in ATV, SSTV and WEFAX?
This is a large subject area in itself. Amateur Television (ATV), Slow-scan TV (SSTV), and Weather FAX (WEFAX) all deal with transmitted pictures. (ATV includes moving pictures and audio just like your household TV.)

Equipment is available to interface to most common microcomputers including PC clones, Amigas (which are prominent in most video applications anyway), Atari ST, and others. (At last check, we didn't see Macintosh on the list.) There are also a handful of publications on the subject.

All this information is available via FTP in the /pub/ham-radio directory at ftp.cs.buffalo.edu. (See Part 2 for more information on FTP.) The file called sstv_wefax_info is maintained by John Langner WB2OSZ (johnl@avs.com).

The ARRL e-mail server contains an introduction to SSTV in the file SSTV-INFO. (See Part 2 for more information on the ARRL e-mail server.) There is a bibliography of ATV articles from QST in the file TV-B. (See Part 2 for details.)

The KA6ETB e-mail HAM-server has files on SSTV and WEFAX in the directory /hamradio/sstvfax.

Another resource is the regularly-posted UseNet Elmers Directory. The list contains a volunteer Elmer who can help with ATV, SSTV, and WEFAX questions.

** What are these contests I sometimes hear, and how do I participate?
Dozens of contests are held each year, usually at weekends, and can provide useful operating experience. They typically last for 24 or 48 hrs, and are usually on SSB or CW only (the Russian CQ-Mir contest is on both modes at the same time). You can participate by making one QSO or several thousands. In most contests you send a signal report (traditionally 59 or 599) followed by a number that is different for different contests - the most common one is a serial number (so you send 599 001 for your first QSO, then 599 002 etc). The exchange may, however, be your age (All Asian contests), your CQ or ITU zone (CQWW and IARU contests, respectively), your state (ARRL contests) or something else. Read "Contest Corral" in QST for the rules for all

major contests - the more serious contester may wish to subscribe to the National Contest Journal, or join the e-mail contest mailing group (write to Trey, WN4KKN, at garlough@tgv.com). Knowing the rules can prevent embarrassment - you will get a cool reception if you are a W or VE and call a W/VE in the ARRL contests, since they can only work non-W/VE stations. Otherwise, QSOs made in contests are just as valid for DXCC (DX Century Club - more than 100 contacts), WAS (worked all states) and other awards as are 30-minute ragchews. Although not strictly a contest, the annual Field Day provides very useful operating experience under less than optimal conditions and is highly recommended for new operators - check with your local club for their Field Day plans some weeks before the (late June) event.

For more information on contests, the ARRL e-mail server has the following files: CONTESTS-93 (as of this writing, substitute current year), CONTEST-LOGS (for contest log formats), FORM-10M (10m contest entry form), FORM-VHF (VHF contest entry form), and others.

If you know your longitude then it's easy: Each time zone is 15 degrees wide, centered on a multiple of 15 degrees of longitude. So the centers of each zone are 0, 15, 30, 45, 60, ... degrees (east and west of Greenwich, England). Count up the number of multiples of 15 degrees to get within 7.5 degrees of your longitude; if you're west of Greenwich then the number of multiples is the number of hours you're *behind* UTC.

Here in Hawaii we're within 7.5 degrees of 150 degrees west longitude, which is the 10th multiple of 15. Thus, we're 10 hours behind UTC.

Having said that, beware that some time zones follow political lines rather than lines of longitude. If you look at any world map you'll see the Date Line does not always coincide with 180 degrees longitude.

>
>This is certainly legal.

And you only have to ID on the same *band*, not the same exact
frequency, and nowhere does it say one's ID must be at the same power
level as all transmissions. Many operators did a quck QSY to a simlex
frequency to ID their station on low power.

Remember, the reason for the ID requirement, as far as enforcement is
concerned, is for the FCC to be able to identify the transmitting station.
If the FCC had the need to identify one or more specific station
participating in this public service / emergency exercise they would have
had no difficulty.

(Could the same be said for those involved in an HF pileup?)

2906. Kenwood 732.dead.2mtrs

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-22 07:25:21 UTC
From: droy@netcom.com
Message-ID: <droyCznrA9.480@netcom.com>
Source record: 256350

Hello,
Has anyone here had problems with the Kenwood 732. I sent the radio back because the power output on the 2mtr side died. They had the radio for 2 days and sent it back after having, quote "Repaired APC circuits. Resoldered all joints and do corrective/preventive repairs on TRX unit and APC 023 protect mod. Full function test rx/tx GOOD. 2 mtrs po 50/12/5 Stable." unquote.

This seems to translate to "could not find the intermittent problem."

The radio worked for 3 days and now does not put out any power on the 2mtr side. It is back in the brown truck to Long Beach.
Have you had similar problems? Please let me know, I would like to suggest to the kenwood folks a plan of attack to fix this problem.

Please reply here or e-mail me. I may post your replys minus your name if you have a similar story to save the next ham radio brother (sister) a few UPS charges.

Thanks for reading this.

>
> Jeff NH6IL

I can't substantiate what percentage of the hams cited actually use
the code for communications but most have passed the code requirement.
The rabid code defenders in the group have contended that forcing hams
to acquire Morse code at specific sacred speeds by itself insures that
Ham radio
will not suffer theproblems of the citizens band. I, therefore, contend
that these NAL prove that isn't the case. In reality that has always

been BUNK.
The ham community reflects the same "only me" attitude as the general
population.

Perhaps the code users could develop "positive" reasons for using morse
code rather than "negative" reasons.

From: anderson@ncrsun1.ncr.usace.army.mil (Kevin Anderson)
Subject: Range of 10meters at night?

I got wondering the other day about the range of 10 meters
in the middle of the night. Are we talking line of sight?
I would think a ground-wave component would be there, so
actually further than LOS should be normal.

I would think 10m could be available for a state-wide
or some sized area local net, much like 80m seems to be
used during the daytime for MARS, etc.

Any thoughts? A fun/neat test would be to take two identical
mobile setups, and start somewhere and drive opposite directions
on a freeway, staying in constant contact, reading off mile markers,
(and talking about things) until loss of transmission occurs.

It would be a way to keep those 10m sets warm until the next
cycle becomes favorable. Maybe people are already doing
this, although I don't hear about it.

Just pondering.... 73 de Kevin, KB9IUA

>was in trouble and he could not find his way out of the burning warehouse.
>
>In reminder of this tragedy the challenge is for some one to DESIGN and
>BUILD a transmitter or transponder that could be turned on by both a fire
>fighter or a tracking team trying to locate a fire fighter.

Saturday, while at a nearby fire station looking at the new engine,
one of the crew pointed out their personal locator beacons.

These small devices were designed so that if motion stopped for 20 or
30 seconds, they started a loud audible alarm. The firefighters were
all equipped to track the audible alarm, being equipped with standard
model ears.

The audible alarm suffers less from multipath, and needs no special
equipment for carrying it. It also goes off before the firefighter is
missed by outside personnel.

They seemed like a real good idea.

Hello John...
The ZIP file that we downloaded off of the local BBS does not contain the
plain ASCII docs. If you could point me toward an FTP site, I could snag
a copy of the program easier than you could send me the required docs.

Thank you very much for your input. I appreciate it very much.

At the Cleveland Museum of Art a few years ago, my brother, KM8Z and I
were asked to check our HT when a guard saw us transmitting on simplex.
They said it would interfere with the security systems. Perhaps this
amounted to making *them* jumpy. In any case, they were polite, as
were we.

Actually, some VECs, at least, do have a "test." (The ARRL/VEC does.)
However, it is not the same for all VECs. Making another test would
(almost) comprise making another license class. This is much more work
than it is worth.

>which it came as well). No screaming, just a series of reasons why Morse
>*testing* is irrelevant to the service. Now, reread Gregory's posts, or
>postings from his cohorts. Do you find *any* reasoned argument at all?

Actually, yes. I don't agree with it, but I do recognize a reasoned
argument. The reason I don't agree is because I don't agree with his
starting point. So far, everything either side has said has started
from diametrically opposed "facts." If you intend to convince someone
to agree with your post, you must first start with something they agree
with. So far, as far as I can tell, you have not even *attempted* to do
this. (I think Greg has tried, but I don't think he's has succeeded.
However, he has tried...)

I agree testing isn't relevant, but there are those who don't. If I was
one of them, I would not be convinced by any of your "reasons."

>I welcome *rational* debate, but all that seems to be forthcoming from
>the other side is emotion.

Emotion is most of what is coming from both sides. If you truly welcome
rational debate, it would be refreshing change if you exhibited some...

SUBJECT: OPS - Information Unused??
RB 350 RELEASE DATE: Oct 31, 1994

These weekly BULLETINS appear in most full service packet radio
BBS in the U.S. They are technically addressed to RACES @ ALLUS
in order to be automatically filed in the bulletin board files
sections. As to the topics these contain, they apply equal well
to most government emergency communications units whatever their
name.

Also during an emergency the OES SITREPS (Situation Reports) and
situation summaries addressed to RACES @ ALLCA are sent over the
same system for information to all who need the current status on
such events as an earthquake, flood, or major wildfire, for
example. Numerous fire crews advise they rely on the packet
(digital) situation reports in order to keep abreast of events as
their ONLY source of information.

These BULLETINS are addressed to the emergency management agency
managers. They are intended for delivery by the Radio Officer,
with the intent that it will strengthen the rapport between the
Agency Coordinator and the Radio Officer, particularly if they
take the time to discuss the material they contain.

The purpose of getting the Radio Officer into the Emergency Services office is to preclude the biggest bugaboo to volunteers; that is, namely, "out of sight is out of mind". Too often volunteers sit back and wait to be called by the officials and wonder why it never happens. Worse than that are any unattached and undisciplined volunteers who dispatch themselves into the fray with all good intentions, but in so doing further obfuscate the disaster.

Unfortunately, however, these bulletins are sometimes not delivered to the agency for several reasons:
(a) the Radio Officer or other person doesn't have packet, and no one else has told him/her they exist.
(b) the Radio Officer isn't doing his/her job or has delegated it to staff without following up to be assured it occurs;
(c) recipients don't read the header or grasp the significance of the agency address status;
(d) local Amateurs THINK they belong to the emergency communications unit but really don't do anything about it.

The next four bulletins "We Wait, but No Calls", will cover related misunderstandings.
eom

RACES Bulletins are archived on the Internet at ftp.ucsd.edu in hamradio/races or in hamradio/packet/tcpip/incoming and can be retrieved using FTP. The opinions stated are those of the author of the bulletin and not the poster.

Subject: Atlas 210x HF xcvr

Mike Stramba (mike@io.org) wrote:
: Is anyone familiar with the Atlas 210x HF xcvr?

It was state of the art in its day, which was about the mid 1970's.
I got one a year and a half ago and used it while operating as YN1ASW

in Nicaragua last year.

: I'm going to look at it tomorrow night. The seller is asking $500.

I think that price is about 2X too high.

: It is a solid state unit that will run on 12v, has 250w of transmit power,
: and covers 10 - 160 meters.

You'll be lucky to get 100 watts out at 13.6 volts, and it will be
less at 12 volts. The 210x covers 80 - 10. There was a very similar
model, the 215x, that covered 160 - 15.

I liked that rig, it is still waiting for me in Central America, but
it was not trouble free. I had nasty problems with spurious
oscillations in the final on certain bands as the power level was
increased. This seemed to depend upon the match to the antenna. I
ended up being very cautious about operating when my housemates wanted
to watch television.

I guess I'm not much ham; I was more curious as what kind of firepower
they would bring through the StarGate. Kurt only had an H&K MP5 SMG (mind
you, he WAS portraying an air force type, after all).

Subject: Hams on Bicycles! Info about BMHA

There is an organization for ham radio operators who are also
bicyclists, the Bicycle Mobile Hams of America. This file will tell you a
little bit about the BMHA.

From the BMHA Newsletter:

"BMHA got is start when a "Stray" in the June 1989 QST magazine asked to
"get in touch with hams who operate their radios while bicycle-mobile, or
while in any other human-powered conveyance," signed by Hartley Alley, NA0A.
Twenty five hams responded, filled out questionnaires, and received a
summary of the collected data.

"In April of '90, we had our first BMHA Forum at the Dayton HamVention.
We played to a packed house, overflowed the room, and added 54 names to our
mailing list. Our three subsequent forums have drawn increasingly larger
audiences, and now BMHA is established as a 'regular' at this world-renowned
event.

The BMHA is governed by a board of directors, led by the Chairman and
Founder, NA0A, who also edits the quarterly newsletter. Membership is
available for $10/year (US) or $15/year (Canada/DX). Family membership of
two or more hams is also available for $15/year. The newsletter is published
in January, April, July and October.

BMHA conducts an on-the-air network on the 1st and 3rd Sunday of each month.
The frequency is 14.253 (+/- QRM) and the early session is at 1800 UTC
while the regular session begins at 0000 UTC (Monday morning UTC).

A sample of the BMHA newsletter is available for an SASE.

The address is:

Bicycle Mobile Hams of America
P O Box 4009
Boulder CO 80306

(303) 494-6559

Back issues of the newsletter are available for $1.75 each. Inquire about
the availability when you ask for your sample newsletter.

73 and hope to hear you on the air

-->etc. So if it is 5:00 pm here in Arizona what would the UTC time be?
-->How do I figure this out?
-->
-->Thank you for your time and help.

Both arizona and GMT (UTC) do not change. Therefore UTC is 7 hours
ahead of your local time. If you are given an UTC time to make
a QSO contact, you are 7 hours behind UTC, subtract 7 hrs from the
UTC to know when to make your contact.

Subject: QST UHF noise generator

Allen Wallace (allen@dtint.dtint.com) wrote:
: In the may 94 QST there is a UHF and microwave noise generator article.

: My question is why is there a 2.2 pf capacitor across the output on the
: UHF version?

: Granted, the reactance of a 2.2 pf cap @ 500 MHZ is only 145 ohms, but
: all I can see is that it would roll off the high UHF output.

In the absence of knowledge, I will offer an opinion.

It's probably to improve the output return loss (SWR) at high frequencies.
If the output impedance has a small net inductive reactance, then adding
a capacitor in parallel would give you a pure resistive impedance.

>A very naive question: I was planning to have our tv antenna removed
>while roofers are on the roof anyway, since cable gives much better

>reception. But would the tv antenna be useful for fm radio reception?
>If so, what kind of wiring would be best?

Your best reception will come from hooking your cable into your FM
receiver, *if* your cable system passes through the FM band. Many do, but
some have taken over the FM band to be able to provide more channels.
If that is the case, the tv antenna should provide good reception.

Which just goes to show that anyone can learn code. But the NAL's
you speak of are not being given out to CW operators. I honestly
cannot recall ever hearing of a violation notice issued to someone
due to a regulation infraction while that operator was using CW.
I've been reading QST since 1968 and have seen plenty of notices
posted but none given to a CW op. Can you cite just one case?

: --
: 73, Cecil, KG7BK, OOTC (All my own personal fuzzy logic, not Intel's)

Hey, lets just eliminate the written tests, too! Some folks are
genetically incapable of learning electronics, too. Or doing math.
Sure wouldn't want to eliminate them from Amateur Radio!

This "denying individuals access to publicly owned airwaves" argument
is about as ridiculous as any I've seen on this group...from either
side.

How do you feel about eliminating all laws regulating uses of National
Park lands? They're publicly owned. How bout if we just opened them
up for everyone to use as they saw fit?

>I would think a ground-wave component would be there, so
>actually further than LOS should be normal.

Kevin, yes indeed, so depending on power, antenna, hills it will
be somewhat better than 2m. The cb'ers will know exactly.

Now there exixt quite a number of repeaters, and this is fine at night
of in the winter, but to my tast causes far too much QRM in the
summer during sp-E. (or wait until ths sunspot cycle comes back on
and you find european stations patched through to 2m repeaters...)

You are right about using 10 for local traffic now, the invasion by cb into
28 MHz is already getting a pain here.

Hi YLs and OMs,

I've tried to post this via gateway into the German
newsgroups, but without success. Thus, I try it here.
In the case somebody from abroad would come to Germany
and look for a direct QSO on 70 cm, an English trans-
lation follows.

(German text)

Wer moechte auf 70 cm mal ein Direkt-QSO "fahren"?
Man hoert so wenig davon ...
Ich bin meistens im Raum Berlin-Potsdam zu finden,
gelegentlich auch in Sachsen, vorerst aber nur in
F3E QRV (habe nur ein TH-75E nebst selbstgebastelter
Antenne).
Skedwuensche per e-mail (Adresse siehe unten).

(Translation)

Who wants to have a direct QSO on 70 cm? One hears but
a few of them ...
Mostly, you will find me in the region of Berlin and
Potsdam, sometimes in Saxonia, too. Actually, I am QRV
in F3E only (I have only got a TH-75E with homemade
antenna).
Skeds via e-mail (address follows).

I would strongly suggest you follow that incident up. Your incident and how it came up will end up being policy for the guards. A security guard should not be making policy. I might expect no change in the outcome but unless it is pushed, you will see this in more and more places. I would also suggest killing them with kindness but making it known that you will not stop until you reach the board of directors.

A number of friends and I spend a lot of time at the Cedar Point amusement park each year. The wives carry WTs in their packs but we listen to ours. We use the Yaesu hidden speaker mike. There is absolutely nothing threatening about using our radios as you never see the radios or mic. Due to this, both Cedar Point and dozens of other areas and attractions have not seen the need to question the radios.

2915. Joint ARRL/LARC statement

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-22 14:14:49 UTC
From: greg@netcom.com
Message-ID: <gregCzoA8p.MA1@netcom.com>
Source record: 256364

I read with interest the joint LARC/ARRL statement published in
December QST.

While I'm glad to see that the two organizations have settled
their differences, I was disappointed at the near-total lack of
useful substance in the statement.

At first the statement seems to say something, at least from
a historical perspective, and presents the precious few facts
upon which the two organizations actually agree.

But then it ends with a 'thump,' indicating that the matter is
settled.

It doesn't say how.

It doesn't discuss terms, or what the organizations agreed to do,
or not to do.

The really important and substantive information, which is how
things are to proceed from here, was missing.

Now, I have been criticized in the past for my position that the
ARRL Executives' behavior sometimes resembles button-down, white-collar,
spin-doctoring, statement-making, big-bad-corporate America. This,
more than the honest accountability which one would expect from
an of-, by-, and for- kind of outfit.

To those critics I would ask the following:

How does presentation of an empty statement settling a serious allegation
of discrimination, without comment, and without indication of what you've
agreed to on our behalf, conform to your claim that you go out of your
way to be accountable to the membership?

Frankly, I think that Members with positions on both sides of the LARC/ARRL
question are probably asking that question about now.

Greg

As a college professor with more experience writing exams than I wish to remember I will add my two cents worth. While essay questions may require the examinee to express his/her knowledge, they require the examiner to be able to grade the response. I see no practical way that this can be accomplished. Although I'm am not a VE I know that even with today's multiple choice examinations the grading process is time consuming. Can you imagine the amount of time it would take to grade essay exams.

Sounds like a great project Gary.

I think it makes even more sense for point to point
data links (Packet).

It would be pretty easy to adapt the 2 megabit/sec modem
in the 1994 Handbook to work with a video transmitter.
The receive converter can be as simple as a $30 Teflon
circuit board and a bunch of MMICs--about $50 worth of
parts.

The National Park Service discovered the truth of the above, at least in Yellowstone N.P. They have a fire station on top of one of the mountains in the Park. The operator there goes up in June or so and comes down in maybe September. I guess his supplies are packed in. Anyway, the hermit <:) who currrently mans the post is a ham and when he started the job, he took 2m gear with him to help pass the time. After he turned in a few reports based on information received via amateur radio, it became part of his official job responsibilities to monitor 146.52. I talked to him 2 or 3 times this past summer when we were in Yellowstone. It was nice knowing there was an official presence available via 2m from most areas of the park.

Yes, if you can not read morse for any reason you should not be allowed on HF. That is because of the reason for the morse requirement.

Fairness has absolutely nothing to do with it? Would you give a blind person a driving license to be fair? The reason for CW is to allow someone to tell you to QSY on a shared band if causing interference. It is an international requirement. One can argue about speed, but until radio waves no longer propagate outside the USA you can't get rid of morse.

Mike

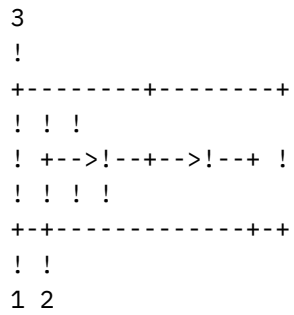
Source record: 256236

GM>Are their any?

There are many. What do you want to do?
****
Extended Transmit Mod

Call the ICOM parts department ((206) 454-8155) and order a pair of MA133 diodes (P/N 1790000860). These are the three terminal surface mount diode packages (possibly SOT-22). It is probably not advisable to substitute conventional leaded glass diodes here due to size restraints.

The diodes are connected as follows:



The modification involves removing one surface mount component and installing two others. The working parts are extremely small and the mod should not be performed unless you are comfortable with working while using a loop eyepiece or other magnifying device. This is a "surgical" operation. Take all the usual precautions with respect to static electricity, etc.

Remove 5 screws holding back on, and two screws on side of case below the PTT switch. Gently pry the unit apart.

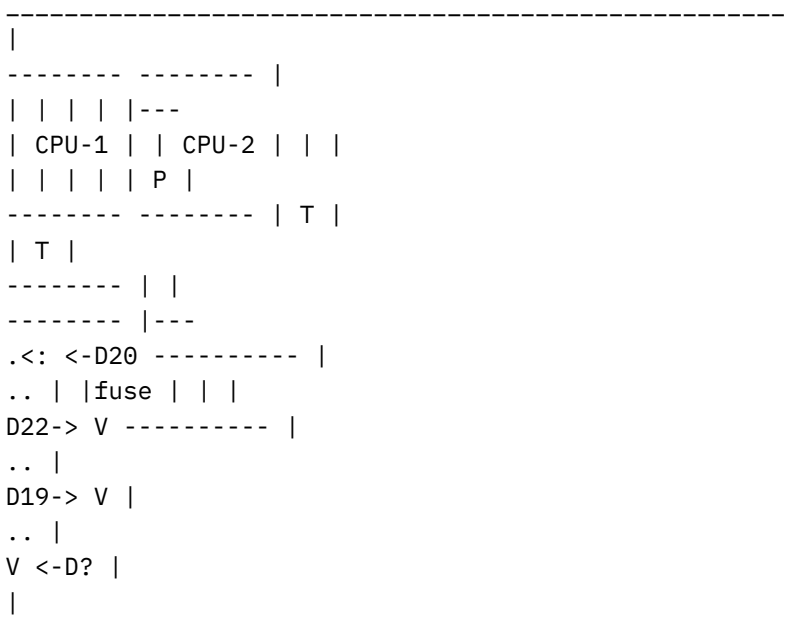
Inside the unit are two RF "stack" units. The complete RF "stack" is composed of two enclosed sheet metal boxes sandwiched together, about 1.5" wide, 2" tall and .5" thick. Each RF stack unit (one per band) is totally self contained, is about .25" thick, and plugs into the "motherboard" using connectors mounted on one end.

First, remove the stack units. To do this, remove one screw from each side of the stack. Remove the single screw off the bottom end of the stack and gently remove the metal spring clip holding the stack together.

Carefully lift each stack unit out by pulling it back and down. They should easily unplug from the upper motherboard. Set them aside for now.

At this time the back side of the front panel is clearly accessible and
the two CPU's are visible side-by-side across the top. Now refer to
the following illustration:

Top of Radio, Back side of Front Panel



D19, D20 and D22 are locations on the board. Only D22 is installed
at the factory. To perform the mod, you must do the following:

Remove D22
Install D19
Install D20

The locations of D19 and D20 are clearly silk screened onto the circuit
board and are easy to locate. Don't attempt to re-use D22 since it is of
wrong type. The periods (..) show the approximate location of the solder pads
for the 2-legged sides of the diodes.

D19 and D20 are not mentioned in any way in the service manual part list. They
are drawn in the picture of the logic board, though.

Diode D22 may be removed by carefully heating the leads and prying it up
using a sharp tool. Be very careful since it's easy to lift the solder
pads.

One method of installing diodes D19 and D20 is to use a very small drop

Source record: 256237

(Continued from previous message)

of super glue to mount the part, and then use a soldering iron to tack
down the pins.

After the parts are installed, reassemble the radio. Although the
manufacturer recommends that the microprocessor be reset after this
mod, I have found it to be unnecessary. All memories retained their
settings after the mod. Tests using a dummy load and a frequency
counter showed TX ability on UHF from under 400MHz to over 490MHz.
TX on VHF covers from 136MHz to 174MHz.

The effect to the initial matrix goes as follows:
- D22 sits between D3 and 11. It is removed.
- D19 connects D0 and 11.
- D20 connects D1 and 11.
These connections are totally undocumented by service manual.

Note that D19 and D20 are two-diode devices but it is actually possible to
make the modification using two single diodes by connecting them between
pins 1 and 2 in the place of SMD diode-pair. The space available is small, so
consider this possibility only when You cannot get the SMD devices.

After doing the above, REQUIRED!!

select the VHF band as MAIN
push F (above the PTT button) and SET (the 8 button)
then using the ^/SCAN button make the lower right symbol of the band say PL
rotate the right knob to set the display to 1,10, or 100 as desired
1 sets entry to single digits only
10 sets entry to 10's and single digits
100 sets entry to all digits

hit PTT

Now - repeat the above for the UHF band - Note It WILL NOT work unless you do i

You now have a walkie that requires all the digits (assuming you chose

****
-

This is less of a mod than it is a function. To expand the receiver
frequency range of the Icom IC-W2A to 118.00-170.00, 322.00-513.00,
and 800.000-970.000, do the following:

o Hold down the Light, B, and # keys while turning the power on.

That's actually a four button sequence, since power on is controlled
by a keypad button.

****
--

Cross Band Repeat Function

To access the cross-band repeat function, first perform the extended
receive mod by holding down the Light/B/# keys while turning on the
power.

To enable cross-band repeat, set each band to the frequency and mode
desired. Set the current band to VHF.

Press (Function-2) (Function-Enter) and the little "L" indicator will
flash. The radio is now in the cross-band repeat mode. Do disable,
press (Function-Enter) again.

****

Radio: IC-W2A/E, IC-2SRA/E, IC-4SRA/E

Trouble: Weak transmit audio, deviation below the specifications, high end
of the speech spectrum missing.

Tools needed: A good soldering iron with a sharp tip, desoldering braid,
solder, sharp-nosed pliers, small cross-point screwdrivers.

Cure:

1. Open the radio case following the instructions in the owner's manual
(p. 45).

2. In radios fitted with the UT-63 board, pull out the board.

3. Unscrew the two small screws holding the tin plate against the bottom
ends of the band modules. Pull out the plate.

4. Pull out the band modules.

5. Now you see the microfone fitted to the mother board. It should fit
neatly against the inside of the fascia panel. If it doesn't, carry on.

6. Unsolder the microphone leads from the mother board. BE CAREFUL not
to overheat the board and the wire insulation.

7. Pull out the microphone and the rubber gasket.

(Continued to next message)

Dear Bill:

I am presuming that you believe that in order to have access to HF frequencies, you must demonstrate the ability to send and receive Morse code. (The motive for this belief is immaterial at this point.)

I have seen and commented some of the threads in this debate (I will admit to be in favour of deleting Morse code testing, leaving its acquisition as a skill at the option of licensee of a station.)

To help along the debate, would you be kind enough to speculate what would happen if mandatory Morse code testing was eliminated?

In fact, I would welcome views from anyone on this query.

Is this really all you've distilled from a "kilo" of arguments? Leaving
all other arguments aside, code (aka on-off keying) is and will always
be the way to generate and receive RF using the simplest possible
equipment, whether it's a spark transmitter and Branley coherer, or a
one-tube transmitter and two-tube regen, or whatever you'd like to put

together out of your semi collection. When a majority of hams find this kind of equipment trivial from a design and understanding point of view then let's drop the code and congratulate ourselves on having technically-competent membership, but the fact is that most hams *cannot* generate or receive RF other than by writing a check, so the code remains a useful tool to help those hams who want to learn more about the core circuitry of their hobby. If you're not convinced, try putting together a CW HF rig, and then try a VHF FM rig, and see which one is easier to get running, and provides more utility and pleasure. Decide for yourself.

Subject: What are you doing with that walkie-talkie, Buddy?

I agree if you just fold you throw away your rights. Often these "Security Guards" are just frustrated they were born 50 years too late to wear black armbands and give raised arm salutes. Call the director of the Museum and ask what rule you were violating.
I must confess I often take the stealth approach with an ear bud speaker and a midget mike. A fight with two guards is not the right approach but expressing your concerns to the director is. If the director doesn't respond you might show up at a Museum Board meeting and try you luck there.

A friend of mine also more intermod problems on his 5100 than he would like. I am trying to track down anyone who has fix info for this problem, especially from Yaesu or an authorized dealer.

My friend's problem is mainly with VHF (but he uses the UHF side infrequently, so it may be there too).

>
>This is certainly legal.

And you only have to ID on the same *band*, not the same exact
frequency, and nowhere does it say one's ID must be at the same power
level as all transmissions. Many operators did a quck QSY to a simlex
frequency to ID their station on low power.

Remember, the reason for the ID requirement, as far as enforcement is
concerned, is for the FCC to be able to identify the transmitting station.
If the FCC had the need to identify one or more specific station
participating in this public service / emergency exercise they would have
had no difficulty.

(Could the same be said for those involved in an HF pileup?)

I have one of these rigs for packet. I don't know of any receive
mod but I will research it and let you know. The 30 pin connector
pinouts are given in your manual. You can get raw receive and transmit
access there for packet as well as 12v for the TNC, PTT and a keyed
indicator 8v I think. There is more. If you don't have the manual
I could copy it and mail it but looking at your address it would be
surface unless you can figure how to send me a DB in exchange.
I could scan in the hookup and e-mail it to you. 73 de Jerry KC5EGG

Last Christmas while visiting family in Colorado we decided to tour the Denver Mint. I had my HT in my coat pocket and as we went inside I realized we would have to go through a metal detector. As my turn came up I handed my HT to the security guard. I expected some kind of trouble at this point. He looked it over and after I had passed the detector he handed it back and told me his call sign and favorite Denver repeater. Probably just lucky for me that he happened to be a fellow amateur radio operator and knew what it was all about.

>tions the grading process is time consuming. Can you imagine the amount of time
>it would take to grade essay exams.

VE team manhours are certainly a factor, but I don't think it's the
important factor. The more pressing issue is how to assure uniform
and fair grading by a varying group of VEs, IE the same essay submitted
to several different VE graders could result in several different
evaluations of the answers. This makes the system unfair because
candidates who get an "easy" grader will have an advantage over those
who hit a "hard" grader, not to mention that English language writing
and comprehension skills vary widely among people of similar technical
competence. I'd point as example to any number of semi-technical posts
here where respondents are arguing past each other because they didn't
fully comprehend the other person's point, either because it was poorly
expressed, or because their reading comprehension wasn't up to par.

Multiple choice tests aren't faultless, but at least the grading can
be assumed to be uniform and even handed. Multiple choice tests can
also be "hard" if the questions are properly worded and chosen.

ANARTS - Australian National Amateur Radio Teletype Society !

ANARTS News Bulletin 836 20th November 1994

A get-well soon to Jim ZL1KN

We have heard that Jim ZL1KN has had a couple of weeks in hospital with pneumonia and is just starting to take a few steps.

I am sure that all RTTY users and listeners wish Jim all the best for a speedy recovery ... get back on the airwaves soon Jim, and our relay officer hopes to hear you on the callbacks.

73 from all of us here at ANARTS.

The next ANARTS meeting will be held on Friday 2nd December at the QTH of Keith VK2ZZO in Lane Cove. The meeting will commence at 7.30 pm and will end with tea or coffee and biscuits. For further information contact Jim VK2BQS or Col VK2CTD at their QTH, or phone Pat VK2JPA at work on (02) 230 3722.

Hope to see you there.

Next week ...

Rules for the TARA RTTY Sprint contest coming up on 10th-11th December will be published here. Keep watching.

P.S. For Sydney amateurs, the WIA has the new callbooks (1995) for eleven db each for WIA members, twelve fifty db otherwise.

IPS WEEKLY REPORT

11 NOVEMBER - 17 NOVEMBER

ISSUE No 46

DATE OF ISSUE: 18 NOVEMBER 1994

INDICES:

DATE 11 12 13 14 15 16 17

10CM 79 80 81 79 79 79 79
A 6 4 6 8 9 3 (4 ESTIMATED)
T 35 28 54 33 45 45 31

SOLAR ACTIVITY WAS VERY LOW 11TH-12TH, AND 14TH-17TH NOVEMBER AND LOW ON 13TH.

THE GEOMAGNETIC FIELD AT LEARMONTH (WA) WAS QUIET THROUGHOUT THE PERIOD EXCEPT FOR 15TH NOVEMBER WHEN THE FIELD WAS QUIET TO UNSETTLED.

IONOSPHERIC F2 CRITICAL FREQUENCIES RANGED FROM SLIGHTLY ABOVE PREDICTED MONTHLY VALUES TO 15 PER CENT ABOVE. SPORADIC E MAY HAVE CAUSED DEGRADATIONS ON 12TH-13TH, 15TH AND 17TH NOVEMBER. SPREAD F WAS ALSO OBSERVED DURING LOCAL NIGHT ON 17TH.

FORECAST (18 - 24 NOVEMBER)

SOLAR: VERY LOW.

GEOMAGNETIC: QUIET TO UNSETTLED, POSSIBLE ACTIVE PERIODS ON 20TH AND 24TH NOVEMBER.

IONOSPHERIC: NEAR PREDICTED MONTHLY VALUES.

ARLD066 DX news

Thanks to Bob, WB2CJL, Gary, NI6T, Bob, W5KNE, QRZ DX, Chod, VP2ML, The DX Bulletin, Gary, K8BN, Don, WB2DND, Tedd, KB8NW, the Ohio/Penn DX Bulletin, the Yankee Clipper Contest Club PacketCluster network and the Contest Corral column from the pages of QST. Thanks.

SYRIA. A eight member team will activate YK0A November 23 to 30. Omar, YK1AO, arranged issuance of the license and secured an operating site inside a Syrian PTT training facility on the outskirts of Damascus. The primary objective is to make YK available on CW, RTTY and the low bands. Secondary to that is to operate a two or three transmitter Multi/Multi in the CQWW CW Contest. Some SSB and WARC band operating is possible. QSL via W6OAT

CHAGOS ISLANDS ON 160 METERS. VQ9SS and VQ9QM should soon be active again on this band. VQ9SS plans to be in both the CQWW CW Contest and the ARRL 160 Meter Contest.

TONGA. Paul, KK6H, will sign A35RK from November 24 to some-time early in February. He will operate mostly 160 through 30 meter CW. Plans are to be active in the ARRL 160 Meter contest and CQ World Wide DX CW on 160 meters. QSL via KK6H or the W6 bureau.

ANTARCTICA. Nigel, VP8CMR, has been worked on 14260 kHz after 2230z. Plans are to be active on 17 meters from 1500 to 1900z. He will be at the base until February 1995. QSL to Nigel, Halley Base, BAS, Via Port Stanley, Falkland Islands.

TAIWAN. Tom, WB4IUX, has permission to sign BV/WB4IUX. He should be on the air in late November or early December, with plans to operate 80 and 40 meter CW almost exclusively. He may get on 20 meter SSB to spread the word that he is up and running, and to provide his operating schedule.

ZAMBIA. Ely, IN3VZE, will be active as 9J2CE until November 20. Listen for his SSB on 20 and 40 meters. QSL via IN3VZE.

MARIANA ISLANDS. A group will sign KH0AM during the CQ WW CW Contest. Some activity will take place before the contest on the WARC bands and some RTTY. QSL via JE1CKA, Tack Kumagai, PO Box 22, Mitaka, Tokyo 181, Japan.

JAMAICA. Walter DJ6QT is now signing DJ6QT/6Y5 until December 1. Look for his print in the WAE RTTY contest using the call 6Y5X. QSL via his home call.

CARIBBEAN DXPEDITION. Dieter, DL3KDV, will be active from J6, J8 and J7 starting sometime this month. Listen for him in the CQWW CW contest. Dieter prefers QSL cards via the bureau.

VIRGIN ISLANDS. Listen for N9RJ/KP2, operated by N9RJ, N9KZJ, WB9CEP and W2CGI, from November 12 to 20. Plans are to be on 80, 40, 20, 17, 15, 10 and 6 meters. QSL via WB9CEP.

MARTINIQUE. F6AOI, F6BFH and F9IE will be on all bands with CW and SSB from November 11 to 27. They will sign FM/ their home calls.

ARUBA. Jeff, KR0Y, will sign P40F from Aruba November 21 to 29 including an effort in the CQWW CW Cont%st.

GAMBIA. C56/G0MRF is not listed in 1994 Callbook. Direct QSLing is via G8PDW, or bureau cards may go addressed to G0MRF.

Coming events

December 2nd ANARTS meeting

10th-1th TARA RTTY Sprint
2100z Sat.-0100z Sun.

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by packet to the President (Col) VK2CTD, or the Secretary (Pat) VK2JPA at VK2RWI.

News items may be sent to Broadcast Officer PO Box 60 Blacktown 2148 Australia, or by packet to VK2JPA at VK2RWI. Email addresses for the Broadcast Officer are : patl(at)pitt.conmusic.su.oz.au
The Society welcomes news items on any digital subjects from anywhere in the broadcast coverage area. We are looking for- ward to news from your areas to let other amateurs know what you are doing in the hobby. Hope to hear from you.

73s de Pat VK2JPA Broadcast Officer
That concludes the broadcast for this morning/evening.

You can buy those SAME amplifiers directly from Mirage, last time I checked. The ATV versions are availiable from them. I have old catalogs listing them.

Subject: ARLX031 Big Dish details

SB SPCL @ ARL $ARLX031
ARLX031 Big Dish details

ZCZC AX63
QST de W1AW
Special Bulletin 31 ARLX031
From ARRL Headquarters
Newington CT November 21, 1994
To all radio amateurs

SB SPCL ARL ARLX031
ARLX031 Big Dish details

Big-Dish operation from VE3ONT during the ARRL EME Contest November 26 and 27 is confirmed. They will transmit on 144.100 and listen between 144.100 and 144.110 on both days.

The station will run full legal power into the 46-meter (150-ft) dish at Algonquin Park, Ontario (grid FN05xw). The lower elevation limit of the dish is 9 degrees, so Moon access is somewhat limited.

VE3ONT is especially interested in working small stations, and the operators plan to ''work through'' the bigger stations as rapidly as possible. SSB operation is planned for about an hour at Moonrise and from time to time thereafter. If you want to work VE3ONT on SSB, please wait they switch to that mode.

Please also do not request multiple QSOs, even on different modes, because this practice reduces the chances for small stations to work them.

Small (OSCAR-class) stations may want to delay their attempts until somewhat later in each Moon pass, to avoid QRM. And avoid calling VE3ONT on 144.100.

The operators will make rapid-fire contacts, using the ''T-M-O'' method instead of RST signal reports. VE3ONT will have no skeds, no ''special'' listening frequencies, and will not be available via telephone.

There will be no pre-contest operation on 50 MHz or 10 GHz, as earlier had been hoped.

As users of a non-amateur antenna, VE3ONT is not in competition with any other stations. Thanks to Mike Owen, W9IP, for this information.

Subject: How Do I Convert Local Time To UTC Time?

-Broughton,J.L. (waco@intgp12.ih.att.com) wrote:

: Either way is correct. What is not correct is 12:00 a.m. or 12:00 p.m., as
: no such beast exists. Noon is the meridieum (meridian) and a.m. indicates
: time before it (ante meridieum) and p.m. indicates time after it (post
: meridieum). So, 1200 hours cannot be before or after itself and 2400/0000
: hours is both 12 hours before and after, so can't be just one. Noon and
: midnight are the real times. But, using 24-hour format solves this problem;
: hey, it works for Europeans!

Whoops! As I understand it, "midnight" in English actually refers to the *end* of they day. That means "midnight" = 12 p.m. = 2400. I have heard that "midnight" in a legal contract will be interpreted this way - right after a very expensive lawsuit. (My insurance policies begin and end at "12:01 a.m. Eastern Standard Time." Well, it's unambiguous, but if your policy expires on the 31st of October, it's *not* OK to drive on Halloween!)

Unless you're a digital clock, 12 a.m. indeed doesn't exist and (ready for this?) 12 noon is properly styled "12 m." ("meridies" = "noon") Talk about confusing! Fortunately, I think I'm the only left one who knows this stuff, and I try never to use a 12-hour clock.

From: wwhitby@aol.com (Wwhitby)
Subject: Need Mods for Icom W2A

Extended Rx

Simultaneously push ﷿Light!, ﷿B!, and ﷿#! keys while turning the power on.

Direct Keyboard Entry

1. Perform the above extended Rx mod

2. Access the setup menu (﷿Fcn! ﷿8!)

3. Step throught the options using the ﷿UP! or ﷿DN! keys until you come to a parameter not listed in the owner's manual called PL. This sets the highest MHz place that can be directly entered via the keyboard, selectable between 1 mhz, 10 mhz, and 100 mhz.

4. Using the VFO knob, set the PL parameter to 100 MHz.

5. Exit by pressing the PTT button or ﷿CLR!.

The VFO can be tuned to any frequency by entering the numbers directly from the keypad. For example, if you want to tune to 443.300, you would press ﷿#! ﷿4! ﷿4! ﷿3! ﷿3! ﷿0! ﷿0!.

Crossband Repeater Function

1. Perform the above mentioned wideband Rx mod.

2. Enter the desired freqs and/or modes.

3. Press the ﷿VMAIN! key.

4. While holding down the ﷿FUNCTION! key, press the ﷿2! key. Press the ﷿ENTER! key. The keylock symbol ﷿F! will flash on the LCD, indicating the unit is in crossband repeat mode.

5. To cancel this mode, push the ﷿FUNCTION! and ﷿ENTER! keys simultaneously.

Extended Transmit Mod

Call the ICOM parts department ((206) 454-8155) and order a pair of MA133 diodes (P/N 1790000850). These are the three terminal surface mount diode packages. It is probably not advisable to substitute conventional leaded glass diodes here due to size restraints.

The modification involves removing one surface mount component and installing two others. The working parts are extremely small and the mod should not be performed unless you are comfortable with working while using a loop eyepiece or other magnifying device. This is a "surgical" operation. Take all the usual precautions with respect to static electricity, etc.

Remove 5 screws holding back on, and two screws on side of case below the PTT switch. Gently pry the unit apart.

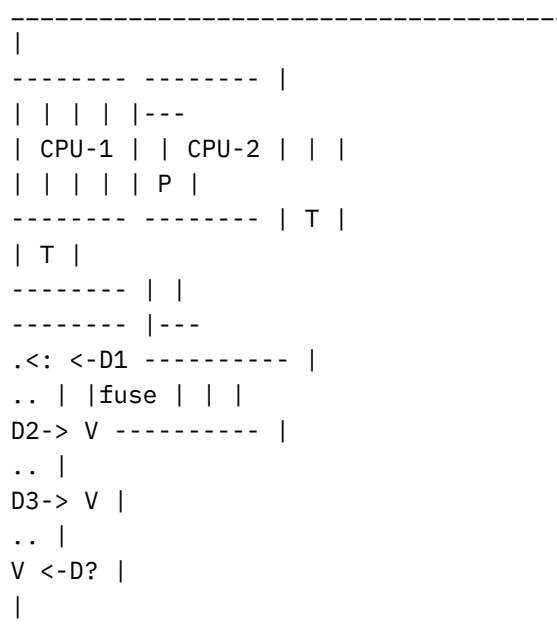
Inside the unit are two RF "stack" units. The complete RF "stack" is composed of two enclosed sheet metal boxes sandwiched together, about 1.5" wide, 2" tall and .5" thick. Each RF stack unit (one per band) is totally self contained, is about .25" thick, and plugs into the "motherboard" using connectors mounted on one end.

First, remove the stack units. To do this, remove one screw from each side of the stack. Remove the single screw off the bottom end of the stack and gently remove the metal spring clip holding the stack together.

Carefully lift each stack unit out by pulling it back and down. They should easily unplug from the upper motherboard. Set them aside for now.

At this time the back side of the front panel is clearly accessible and the two CPU's are visible side-by-side across the top. Now refer to the following illustration:

Top of Radio, Back side of Front Panel



D1, D2 and D3 are locations on the board. Only D2 is installed at the factory. To perform the mod, you must do the following:

Remove D2
Install D1

Install D3

The locations of D1 and D3 are clearly silk screened onto the circuit board and are easy to locate. Don't attempt to re-use D2. The periods (..) show the approximate location of the solder pads for the 2-legged sides of the diodes.

Diode D2 may be removed by carefully heating the leads and prying it up using a sharp tool. Be very careful since it's easy to lift the solder pads.

One method of installing diodes D1 and D3 is to use a very small drop of super glue to mount the part, and then use a soldering iron to tack down the pins.

After the parts are installed, reassemble the radio. Although the manufacturer recommends that the microprocessor be reset after this mod, I have found it to be unnecessary. All memories retained their settings after the mod. Tests using a dummy load and a frequency counter showed TX ability on UHF from under 400MHz to over 490MHz. TX on VHF covers from 136MHz to 174MHz.

Hope it helps,

Warren Whitby

Subject: No-Code Techs & CW (again)

In unceasing articles people continue the code vs no-code arguments. I've been watching this for months, without seeing any likely end to the polarization of attitudes, or much willingness by the extremists to compromise.

I passed the code test at 5 wpm, and now am preparing to pass the 13 wpm test (and, after that, possibly the 20 wpm). I do that because I have no choice, if I am to be licensed do what I want to do, such as HF SSB. I do not do it for the sake of learning "code", because I don't care a damn about sending or receiving morse code.

Possibly someday morse code transmission someday will appeal to me too, but that seems very unlikely at this time.

My conclusion is that after the bs is stripped from most of the "pro-code" arguments, the most common reason many hams want the code requirement retained is to discourage newcomers, to reduce the number of people with whom they might need to share the bands. If in fact they were right, that requiring code would prevent the vandals from destroying ham civilization, then I'd agree. However, it's clear

that there are undesirables within the ranks of the licensed, people
that "code" requirements did not filter them out. And I doubt that
the code requirement prevents many good people from passing the
tests, even though they (rightly or wrongly) regard the "code" as an
aggravating anachronism.

in,
: : if that matters).

: The tech license give you priviledges above 50MHZ. Typically, you
: won't be able to maintain reliable direct communications with another
: station that distant, with rare exceptions. Your mileage may vary. :-)
:
Actually, if you compare the path loss graphs for tropospheric scatter
and EME work, you find that the loss is roughly 50 dB less at 250 miles.

Thus, working 250 miles is real easy between EME class stations. You
could probably even work FM, if your amplifiers could take the duty
cycle. SSB would reduce the power/antennas needed. Tropospheric
scatter is pretty reliable--K1FO reported 230 consecutive schedules
kept with W8YIO over a 580 mile path.

EME refers to Earth Moon Earth--bouncing a signal off the moon.
It was once considered a difficult feat, but technology has improved
to the point where an appliance operator with enough money could
own and operate one.

Similar thing happened to me when I visited the Kennedy Museum in the
old School book depository building. The sign said no cameras or recorders
and it didn't make a difference to them that I had the FCC license with me
(actually a copy) to prove it. Funny thing was that binoculars were ok....

The thing was that I was hesitant to leave my $350 HT with some of
those clowns. Why was the HT a threat to them?

I really don't think a bigger dish is that helpful in this case. The
rain fades I talked about even hit our 8 meter Ku systems. I'm not
talking about a few db here, rain fades at Ku represent *serious*
losses. Pretty much you just wait until the cell moves on. OTOH,
a light general rain typically isn't a problem, even for the small
dishes.

If I were in the market for a DBS system, I'd just buy what they're
offering off the shelf. It's a well integrated system, and trying
to retrofit it to a larger TVRO dish would probably be more trouble
than it's worth. Just accept the fact that occasionally you're going
to get rained out.

The one value of making things public is for accountability and auditing.
Did the league do something out of line? For this, can we not trust
the directors whom we have elected?

Further, I think that there are some things that are better for the
membership to have not have discussed in open. In some ways discussing

settlements could be one such item. Parties in arbitration, expecting some members to be very vocal and set the public agenda, posture and take on much harder positions. This makes settlements, even if mutually beneficial, much harder to achieve. In other words, there is a cost to making all arguments in public. This is why the gag rule is common in many artbitrations proceedings. May be this is why the baseball affair still drags on.

: >code rather than "negative" reasons.
: >* Erich Franz Stocker *
: >* N3OXM *

: Ok, how's these?

: - It's fun.

Beauty is in the eye of the beholder. I have no doubt that it is fun for
you - but it is drudgery for others. I wish to point out that the
overwhelming majority of DXCC New Members and Endorsements are for modes
other than CW. If CW is so much fun, why is it in the minority with
respect to the other awards?

: - It encourages the fading art of experimenting and building your own
: equipment, due to the simple nature of radios for transmitting and receiving
: Morse.

I don't believe the first part of the assertion. Love of Morse code
hardly engenders a love of building one's own station. If what you say
is true, most CW operators would be using homebuilt stations; I think
that is hardly true. In fact, most amateurs, regarless of mode used do
not build their tranmsitting and receiving equipment for their day-to-day
operations. (There are exceptions to every rule, as individuals will
attest but these are exceptions, not the rule.)

The second part of the statement is not quite factual in that difference
between a CW and digital transmitter is trivial. In addition, if push
comes to shove, CW probably can no longer claim that it is the most
rugged of all the modes, digital modes have overtaken them.

: - It's a hand-ear coordination skill that's actually worth something, compared
: to, for instance, mind-numbing video games.

Just about anything, reading a book, taking a walk, brushing the cat,
etc. is better than video games, so that need not be addressed. However,
the value of a skill is relative, not an absolute. In other words, very
few people acquire skills that are useless to them. These skills may be
useful to others, but they are useless to those who have no use for
them.

For example, I have no interest in being a pilot. Therefore, I have no need to learn how to drive an airplane, read an air chart, learn about weather and other skills. Some people may say that these are very valuable skills. No doubt, they are, but not to me. It would be a waste of my time (and resources) to learn how to be a pilot. But those same people will say - "But you can't be a pilot unless you have those skills", so what, I don't want to be a pilot! etc., etc., ad nauseum.

So my point is, what does having good hand-ear co-ordination have to do with amateur radio? More to the point, I operate, for the most part, in the digital modes. I don't need hand-ear co-ordination. I learned how to type many years before I learned how to send and receive Morse code so good hand-ear co-ordination wasn't required.

The only reason I have a 30 word per minute Morse code sending and receiving certificate is because if I didn't have it, I would lose any chance of promotion. This was the word from on high from a senior bureaucrat (who by the way was once an operator on board ships on the high seas). It didn't matter that it didn't make any sense, but it was "the law". If Morse code was so valuable, why was this requirement dropped within 24 hours if this chap's retirement?

I am sorry if the above sounded like a rant, I really am. But I ask the question : why is the hand-ear co-ordination important to operating a radio?

: -Tom R. N1OOQ randolph@est.enet.dec.com

Erich Franz Stocker (stocker@spsosun.gsfc.nasa.gov) wrote:

< snip >

: Perhaps the code users could develop "positive" reasons for using morse
: code rather than "negative" reasons.

An excellent request.

My attempt:

Positive reasons for using Morse Code:

* It can be fun
* With its common abbreviations it forms an international language,
although the range of subject matter is very limited.
* It has advantages when conditions are bad.
* It is useful if you're interested in QRP or Moonbounce.
* It acts as a "lowest common denominator" mode for ID'ing complex
modes.
* It is used as ID on beacons
* Very crude transmitters and fairly crude receivers can be used.
* People with speech difficulties can use it
* It offers variety and diversity.
* You will miss out on some DX without it.

Positive reasons for FORCED learning of Morse code:

* It creates a pool of ready trained operators that can be
conscripted in time of war.
* It is necessary to ensure that amateurs on bands shared with
Morse-only primary users can read requests to QSY or shut down.
* Some people who enjoy it may not have tried it otherwise.
* It creates a fall-back option (theoretically!) for everyone.

I've tried my best to put these in unbiassed terms, and keep my
personal opinions out. Different people will weight these points
differently to me.

Personal opinions:

In most of its attributes, you could usually pick another mode that
may out-perform Morse, but Morse offers its own mix of strengths and
weaknesses which can prove useful sometimes to some people. I think its
advantages can justify the effort in learning it, also there is a quiet
population of people well worth meeting, that tend to hide on CW only.
The point about conscription is now really just of historical
interest as the military don't now depend on telegraphists. The point

about shared bands with government CW stations who have right-of-way is still true in part of the world (where I am, for example), but the timetable is set for their phasing-out Morse operation.
Shortly, there will be no reasons why governmental interests require our Morse test, and the ITU requirement could be dropped. Countries would make their own choice of whether to retain a test. I don't expect they'll all agree. I fear a nasty display of amateurs lobbying for and against Morse tests that could tarnish the image of our hobby. I think this could be very damaging. I think that this damage could be worse than what either the pro- and anti- brigades prophesy if *their* preference isn't taken. There are extremists in both camps that take the matter so seriously that they will do anything, no matter how damaging to try to win their case. The voices of moderate members of both sides will be lost in the clash of titans.

I could accept an end to Morse tests. In theory there will be a loss of a "common language" but in reality many let their skills lapse, and the uses were a bit limited anyway, so it was useful, but not perfect. I would do my best to encourage new people to try Morse.

I could accept continuance of Morse tests. I would do my bit to help people learn and pass.

Given a free choice I'd ditch the test and back encouragement over compulsion anyday in creating happy Morse users.

The thoughts of a moderate!

Now all the fundamentalists on both sides get to attack me :0)X

Kevin, there's a difference between "makes easier" and "is required". I just don't see our no-codes leaping over simple gear in their anxiousness to tackle "more advanced designs".
>
>OK. I suggest Morse Code be a prerequisite for ANYONE entering an
>electrical engineering curriculum! I wish they had such a requirement
>when I went to school. All those analog circuit design courses would
>have seemed so much easier then!

Most EE work does *not* involve RF. Anyone who does go into RF of course does start with simple oscillators and such. In a university environment they have the time, the guidance, the background and the equipment (not many 200 MHz scopes, sweep generators and spectrum analysers on *my* kitchen table!) to move onto more advanced concepts. This is totally different from the situation faced by a new, non-technically-trained ham. His biggest advantage is that he has a license which allows him to get on the air and *use* his experiments, rather than just writing down the performance numbers in his lab book. In your haste to make fun of an argument, I don't think you got much out of it.

On the other hand, real sovereign countries are guilty of playing the
same game in the name of fishing rights. The "island" of Okino-Tori-Shima
is a rock that is a few inches above water that Japan uses to extend
its territorial limits. They have built breakwaters around it to prevent
erosion. Apparently it is in danger of going completely underwater.
Then it doesn't count as sovereign territory. (It already doesn't count
as a DXCC country). Like DXCC, there are arcane rules about what Japan
can and cannot do to bolster this territory. They can't just backfill
it, for example. Very analogous to DXCC country qualifications.
I also found it interesting that the numerous DXCC "countries" that
used to be part of the Soviet Union are now real sovereign countries.
Ditto, former colonies in Africa were always DXCC countries, now they
are also real sovereign countries.
Then there was the trick the USSR played where they put Byelorussia
into the UN to get an extra vote. When the time came, Byelorussia
asserted independence from USSR and immediately belonged to the UN.
So Byelorussia was always a sovereign country.
You want a farce. How about the way we created Panama to get a canal?
"We stole it, fair and square"-- S.I. Hayakawa.

Actually, DXCC politics teaches us about real politics (art imitates
life or something like that.).

For those interested, here is my FT530 programming guide. No mods in here but some might find this useful. YMMV.

Cheers and 73,
Peter
VE3ZXT

How VE3ZXT programs his Yaesu FT530 HT

(These instructions are intended to help remind me on how I program my FT530 and are not a substitute for reading the manual!)

HINTS:

0. To turn the radio on, push and hold (for 1/2 a second) the orange button on the left side. Repeat this to turn it off.

1. If you get into a strange mode or display, hit PTT as this usually clears it. The radio may display "ERR" for a moment.

2. To switch from band to band (left to right and back), use the "BAND" button.

3. If you want the backlight to stay on while using the radio, enter FM -> LAMP. The LAMP button is just below the PTT button. Having the light on can make programming quite a bit easier.

4. The radio is capable of any combination of scanning, searching or being idle on both bands. For example, one can be scanning on the left side and carrying on a QSO on the right side. To make the radio scan, place the radio on any channel (push MR until the channel indicator does not have multiple small arrows) and then push and hold either arrow button. It is also possible to make the radio alternate scan (scan on the left, then right, then left, ...). The radio is also capable of receiving any mixture of VHF and UHF on

either side. If the PLL is unable to lock, the
frequency display will flash.

5. Push the Monitor (Burst) button (above PTT) to break
squelch momentarily. Push and hold the same when the
radio is off to see the seconds display on the clock.

6. Whenever you make a change to the programming of a
channel (frequency, offset frequency, offset
direction, CTCSS frequency, Tone squelch enable, Tone
encode enable, mode AM or FM), it is necessary to save
that channel again to save the changes. As in normal
programming, push and hold FM for two seconds, then
hit FM again. That will store the current settings in
the current channel.

PROGRAMMING GUIDE:

0. Ensure the radio has suitable power and the lithium
battery installed.

1. Reset the radio by holding the MR and VFO buttons
as you power up the radio. This will clear all
settings, time, channels, etc.

2. Enable the extended receive and transmit modifications
by holding both arrow keys while powering up the radio
again. Note: extended Rx and Tx also require a
hardware modification not discussed here. This mod
reportedly allows for reception of 110-180, 300-500,
800-950 MHz and transmission of 140-150, 430-450 MHz
although I haven't tried these to confirm the
extents.

3. Set the clock: FM -> REV to see the clock
FM to go into set mode
(then see page 51 of the manual)

Hint: set the radio in UTC to avoid time zone and
time change hassles.

4. Enable ARS (Automatic Repeater Shift) on both bands.
This will automatically set the repeater offset to the
correct frequency count and direction +/- when you
program in a frequency. The radio understands the
basic amateur bandplan and will not set an offset if
you enter a simplex frequency (e.g 146.520).

FM -> 0 -> 6 -> FM -> 6

and again for the other band

FM -> 0 -> 6 -> FM -> 6

5. Set the alternate display (when only working one band)
to display battery voltage (a nice feature IMHO!):

FM -> 0 -> FM -> BAND

and again

FM -> 0 -> FM -> BAND

Alternative display options include blank (---) and clock.

6. Set transmitter default power to high:

FM -> 3

7. Set scan resume mode on both bands to "P" for pause
(as opposed to "5" which causes the radio to continue
scanning after pausing five seconds on one signal):

FM -> 7 -> FM -> 7

and again for the other band

FM -> 7 -> FM -> 7

8. Set automatic power off if desired:

FM -> 0 -> 3 -> 3

This feature can be useful if you want to conserve
battery power or a pain if you are using the radio as
a scanner or for monitoring packet. Regardless of
configuration, the radio will shut itself off when
battery voltage reaches near 5.5 volts, eliminating the
possibility of over-discharging the nicads. As the
radio nears this shutdown condition, the display will
alternate between normal functions and a battery
voltage display.

When automatic power off is enabled and the radio is
about to shut itself off, it will play a warning medley
one minute before shutdown. The default medley is a
cute musical passage I detest. Fortunately, one can
change this warning song. Refer to page 53 of the
manual on how to enable a custom tone sequence and page
46 on how to program it in (it is the tone sequence in
autodial memory number 1).

9. Set ABS to the desired ratio. ABS is the Automatic
Battery Saver and causes the radio to go into a low-
power consumption sleep mode if it is not used for a
few seconds. In this mode, the radio remains
inactive (conserving power) except for periodic 30
millisecond samples of the frequency being
monitored. ABS may cause you to miss the first
split second of a transmission and can cause problems

for the same reason when the radio is being used for packet. Otherwise, it is a good tool. If I had the money, my car would have ABS too (but that is a different kind :-) To set ABS, enter:

FM -> 4

and then one of the following keys

1 for 10ms sleep, 30ms sample duty cycle
2 for 20ms sleep, 30ms sample duty cycle
3 for 40ms sleep, 30ms sample duty cycle
4 for 80ms sleep, 30ms sample duty cycle
5 for 160ms sleep, 30ms sample duty cycle
6 for 320ms sleep, 30ms sample duty cycle
7 for 640ms sleep, 30ms sample duty cycle
8 for 1.28s sleep, 30ms sample duty cycle
9 for automatic ratio based on recent usage
0 for ABS off

10. If desired, enable Tx Save feature. This feature will adjust transmitted power based on the signal strength of the incoming reception. As a rule, amateurs should always be using the minimum power necessary to maintain their QSO. This is a lazy approach. To enable Tx Save:

FM -> 0 -> 4

and repeat for the other band

FM -> 0 -> 4

11. Program in your favorite frequencies in all the channels. There are 41 per band: 38 channels plus one CALL channel plus one U (upper channel) plus one L (lower channel). If you have enabled the extended receive and transmit, you will find that a wide range of UHF and VHF frequencies can be intermixed on each side. It is also possible to enter 0.8 GHz frequencies in the UHF side! If the frequency display is flashing, the PLL has unlocked and the radio is unable to tune that frequency.

The basic sequence to enter a frequency in a channel is:

VFO enter into either VFO on the band desired

146940 to enter 146.940 MHz

FM (hold for two seconds)

(use arrow keys or dial to select
channel to store frequency in)

FM

The frequency is now stored. After a
second or two, the radio mode returns
to the VFO. Repeat this process as
necessary to enter all frequencies.

Refer to the manual on the programming of the CALL, L
and U channels. These are used for a quick recall of
the CALL frequency, Lower limit and Upper limit when
searching, respectively. Note that if a CTCSS tone
is stored in a U or L channel, that tone will be used
for decoding during search mode if searching is
initiated from that channel.

To set a CTCSS decode frequency on a given channel:

set radio on that channel

FM -> 2

turn dial to desired PL tone

2

It is then necessary to enable tone decode on that
frequency. To do this, repeat FM -> 1 until TSQ
appears in the display (which indicates Tone Squelch
is enabled).

Refer to the manual on setting a decode frequency or
scanning for a decode frequency.

Don't forget to save any channel options into memory
before moving on to some other programming function.
In other words, if you enable tone decode on a given
channel, you must save that channel again to the memory
location in order to save the tone decode setting.
Otherwise, the minute you move off that channel, the
tone decode setting is forgotten.

To set a CALL channel frequency:

VFO enter into either VFO on the
band desired

set frequency, offset and CTCSS tone

FM (hold for two seconds)

CALL

The radio is capable of receiving in AM mode and has
extended receive capability down into the aircraft

band. Although not discussed in the manual, the
radio can store the mode (AM or FM) in each channel.
To store a frequency in AM mode:

VFO enter into either VFO on the
band desired

set frequency

FM -> 0 -> FM -> VFO (enables AM mode)

FM (hold for two seconds)

use arrows or dial to select channel

FM

Note: the VFO will remain in AM mode until you enter the
sequence again (FM -> 0 -> FM -> VFO) or the radio is
made to listen to an FM channel. Remember to return
the VFO to FM mode after setting an AM station otherwise
you may end up programming all remaining channels in AM
mode (annoying!).

Important: If you enter any frequency other than an
amateur radio frequency, make sure you manually set the
offset to - or + so that if you are listening to the
frequency and accidentally PTT, you will not transmit
on that frequency (e.g. a police frequency!).

12. Set IBS (Intelligent Band Select) if desired. This
makes the radio automatically switch to the side, when
you PTT, that last had a transmission. To set:

FM -> 0 -> BAND

Note: both bands must be displayed to set IBS.

13. Set DTMF keypad transmit hang time to on:

FM -> 0 -> FM -> 1

This makes it possible to enter a DTMF number sequence
(e.g. a phone number during an autopatch operation)
without having to hold PTT beyond entering the first
digit.

Please send suggestions/corrections to me,

>air and on Usenet, the 5100/5200 is probably the worst rig Yaesu have ever
>produced!

Intermod on the newer 2M and 2M/70CM rigs will contine to be a problem
as long as hams demand 110-174MHz and 400-512MHz (or higher) receive
ranges. These wide front ends let just about anything through and this
is the cause of the intermod.

What I'd like to see are 2M rigs with nice tight front ends that cover
only 144-148 MHz on receive. If I want to listen to cops or the local
air traffic control I'll damn well buy a scanner!

So if you want a rig that receives DC to light, fine, but don't bitch
about the inevitable intermod.

2947. ICOM IC-255A 2M FM mods ?

No... If you notice, the person I was responding to said that removing the morse code requirements would destroy the bands. I disagree. If anything, I think it would be *good* for the bands.

>To help along the debate, would you be kind enough to speculate what
>would happen if mandatory Morse code testing was eliminated?

I think the number of hams would increase, at least the number on the HF bands. I don't think the HF bands will get much worse (if at all) than they already are (at least the SSB portions).

Possibly the number of hams using CW would decrease, but that is anyway. Besides, if anyone wants to learn the code, they will. (Maybe we should still encourage people to try the code, but I don't think requiring it is a good way...)

[Don't get me wrong...I love morse code. I wish I had the time to work CW, especially in the novice subbands, where it seems you always meet the most people who want to rag-chew. I just don't think there should be any requirements...]

No, you're not of touch. Even the CBers have a national emergency frequency.
Several areas in the country have a local "well known" frequency, but it is
only well known by those that monitor it. As far as a national frequency,
there isn't one. Hams are too busy being the leading edge to be bothered
with it.

73 es GM from Jeff
Go ahead, make my day. Prove me wrong and establish a national panic freq..

Hey gang, can we take this discussion to rec.radio.amateur.policy - pleease?

That's where it's been for the last 6 months (probably longer, but I only
started reading it then). It's also the reason I no longer read .policy -
(perhaps more aptly called rec.radio.amateur.policy.cw :-]) after a week I
read everything that had to be said about the issue - twice. I really
would hate to see . misc become burdened with this thread.

My opinion, of course.

I think the comments about Extra are very well taken "because it's there!" about sums it up for many. Fortunately, I got mine at a time when the FCC was offering special call letters to those who took the plunge. That's the reason I got a tutor and "learned" all that stuff (I was never very good at math). I admit I still go to the ARRL Handbook when I want to pick the right resistor out of the junk box....so it goes!

In any event, it was well worth it to become one of the very few who can say their callsign is their initials. Go for it!

Source record: 256265
Cross-posted to: aus.radio,ips.solar.activity,rec.radio.amateur.misc,rec.radio.info

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 22/2330Z NOVEMBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 22 NOVEMBER AND FORECAST FOR 23 NOVEMBER - 25 NOVEMBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 76/14

GOES satellite data for 21 Nov
Daily Proton Fluence >1 MeV: 2.9E+05
Daily Proton Fluence >10 MeV: 1.2E+04
Daily Electron Fluence >2 MeV: 4.1E+07 (normal)
X-ray background: A3.3
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
23 Nov 24 Nov 25 Nov
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 23 Nov: 75/13

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: mostly quiet.

Estimated Indices : A K Observed A Index 21 Nov
Learmonth 6 2211 1321
Fredericksburg 6 6
Planetary 8 7

Observed Kp for 21 Nov: 2232 2111
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
23 Nov 8 Quiet
24 Nov 8 Quiet
25 Nov 30 Active to minor storm
COMMENT: A significant increase in activity is expected 25-27 Nov due
to a coronal hole.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
22 Nov normal fair-normal fair-normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
23 Nov normal fair-normal fair
24 Nov normal fair-normal fair
25 Nov fair-normal fair poor
Degraded conditions are expected 25-27 Nov, in association with
forecast geomagnetic activity.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
22 Nov 45 15-30% enhanced 00-06UT and mostly near predicted
monthly values thereafter. Blanketing by Sporadic E
layer occurred 15UT and 21UT. Depressions of 30%
were noted at Townsville from 16UT onwards.

Predicted Monthly T-index for November: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
23 Nov 30 Mostly near predicted monthly values, with occasional
enhancements of 15-30%.
24 Nov 30 Mostly near predicted monthly values, with occasional
enhancements of 15-30%.
25 Nov 50 15 to 30% above predicted monthly values
COMMENT: Sporadic E layer was regularly observed yesterday at low and
mid lats and is expected again today. Propagation conditions appeared
normal at low lats and fair to normal at mid lats and are expected to
remain so today. Depressed MUFs may follow the enhancements currently
forecast for 25 Nov.

: John, KE4RRG

Ah! A scoop!

Boy did I get mail about this! Sorry the reference was so obscure.
On 24 October the FCC made final a number of rule changes that were
deemed too trivial to warrant a comment period, all to take effect
20 December 1994. Among these are amendments to allow VECs to file 610s
electronically, mailing out a renewal form 610-R to licensees whose
licenses are expiring a few months before the expiration date, making
Technician Plus an offical license class, revoking the license of
people who provide a nondeliverable mailing address, and changing the
time a grant of license takes place.

From 20 Dec 94 on, the grant will take place AT THE TIME THE RECORD IS
ENTERED IN THE DATABASE. This means you do not need the piece of
paper before you can operate (or start using your new callsign, or
drop that "slant identifier" stuff). (Will wonders never cease?!)
97.5 (Station license required) has been modified to delete the words
"written authorization" and instead requires that a station license
have been granted. 97.7 (Control Operator Required) deletes "only a
person holding one of the following documents may be the control
operator of a station" and substitutes "The control operator must be a
person who has been granted an amateur operator/primary station
license or who holds an unexpired document."

The point of this is to cut the delay new applicants have to wait to
get on the air. The idea is that it's so easy now to get a hold of
the database to verify legal operation. There are other wording
changes - about a page in all - implementing all this stuff, but one
of the effects is we won't have to carry a piece of paper any more.
(Can't hurt with neanderthal security guards, though! :-)

Source: 1 Nov 94 issue of the W5YI report. I'm sure the League will
(did?) send out the same information. W5YI says they're going to
be providing some sort of access to the database in the indefinite
future. I doubt they'll be alone.

Yes, they do. Puerto Rico (in fact, most places in the tropics) do
not, though. The days are close to 12 hours long all year and there's
not much daylight to "save" until evening.

This reminds me of just a couple of months ago, right after I had gotten my
Yaesu FT-530. I was going to the Oakland Airport to pick up my 9 year old
daughter who was flying back from L.A. and had just done the receive mod
the night before so I could pass the time listening to the airplanes and such.
I had to go through the metal detector and then I thought about having my HT
with me. I expected a hassle but didn't get any! The guard just handed it
back to me with a smile. It was really cool listening to the pilot on my
daughter's flight radio the tower from 10 miles out. (It was the first time
my daughter had flown and I was a nervous Dad... ;-)

I'm sorry David, but this is bull. When I give my calculus class an exam (not multiple choice) those that know the material well know how much to write to receive full credit. And even if there is a question of whether they've written ``enough'' they can always ask me during the exam.

This is no different for the ham examinee - if he has studied the material thoroughly he'll be able to draw the required oscillator circuit and state the purpose of each component (there's only a finite number of components!) with ease. If there's any doubt in his mind he can ask the VE if he's stated enough.

Finally, if the VE and the examinee are at odds as to whether the circuit is correct all the examinee needs to do is present to the VE the textbooks he studied from. That will clear up any doubt.

Will essay-type exam questions take too long to administer? Not if the VE's are well-schooled themselves on the material.

Dave from Australia said he's never read of a hostile anti-code
article from Gary Coffman. Here's a typical example:

gary@ke4zv.atl.ga.us (Gary Coffman) writes:

>I think it's somewhat safe to say that many Extras are more competitive
>than the average amateur. That's one reason they took all those tests. If
>that occasionally means bending a rule, some may do so.

So you're associating high speed licensees with law breakers.

>There may be another
>factor at work as well. Some amateurs go for Extra for the status it conveys.
>That may be compensation for an otherwise unsatisfactory emotional life.
>That general dissatisfaction may later manifest itself as misbehavior on
>the amateur bands.

So those that go for the high speed license are emotionally troubled.

>>Just because NALs positively correlate with Morse Code speed doesn't mean
>>that Morse Code causes bad behavior.

>Right. I didn't claim that, just that Morse Code speed doesn't correlate
>with *good* behavior. So it is not an effective filter for good behavior.
>It may well be, however, that the same forces that drive some amateurs
>to higher speeds, and higher status licenses, also drive them to sometimes
>misbehave more often than their fellows. Thus fast Morse may only be a
>symptom in those people of underlying anti-social traits.

So high speed code operators are social misfits with behavioral
problems.

That someone would actually believe the above and post it worldwide
might be indicative of some underlying problems within themselves.

If one of the procode proponents had posted the above with ``no
code technician'' in place of ``extra class licensee'' can you
imagine the riot that would ensue on here?

Hi All,

I'm going to purchase a "top end" mobile dual band (2 meter-70 cm). The question is - which one.

Money is not to much of an objective - performance is.

I've been seriously considering the Yaesu 5100, but have heard a mixed review of it's performance.

It would be preferable that which ever radio I purchase have the ability to be modified for out of band operation.

I currently own a Yaesu FT 530. I like this unit very much.

IF you could help by recommending a radio for me to purchase, I'd be grateful.

You can email me directly with the info if you'd prefer and I'll compile the info I'm sent and post it to this group.

My email is clevelan@teleport.com.

Thanks in advance for your help.

P.S. I'd like it to be able to decode PL tones and generally have at least all of the features of the Yaesu FT 530 +.

Thanks again,

Kenrick E. Cleveland Ph.D.

You say "they sent" like it was intentional... is that what you meant, or
are you saying that somehow a voltage spike (possibly over the cable) hit
your receiver?

If you are refering to the so called "cable bullet", sorry, it doesn't
exist in this dimension... the cable bullet is a software attack and not
a physical attack.

From: PETER@EMBL-HAMBURG.DE
Message-ID: <3aurd3$mu4@dscomsa.desy.de>
Source record: 256205

Hi!
I'm sitting here filling out the "application for permit
of an alien amateur radio licensee to operate in the united states"

Having just come to the fourth (of eleven) questions, I read the rest - and I'm
stumped.

Simply, the form asks for: callsign, country of citizenship, and "mailing
address in the country of citizenship"

Well, its just as simple as that - I am a _british_ citizen, with a right to
live and work in any country of the EU - the European Community - and
physically located in Germany. Not my country of birth.
Which means I have (because I have a permanent residence in DL) a german
license and a German mailing address.

Am I automatically barred from having a "...permit..." ? Or must I simply
give the real addresses (because FCC _know_ that EU exists)? Or must I
use the UK license info - for which the license address is in DL - and
a convenient GB _forwarding_ address?

I'm sure someone has already gone this path and would appreciate any tips,
better still a positive answer!
It may be better to mail me (as well/instead of) following up as our newsreader
scrolls off the top rather quickly (no disk space) and I'm away until Monday.

2975. Important message regarding ALL Licenced Radio Operators

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-23 08:02:00 UTC
From: dave.turner@f134.n250.z1.tor250.org
Message-ID: <2ed2f967@f134.n250.z1.tor250.org>
Source record: 256323

Dear Member of Parlaiment:

I hold an Amateur Radio Licence/Commercial Radio Licence that
has been issued to me through Industry Canada.

In June of this year, Industry Canada released a document
entitled, "Criteria for the Resolution of Immunity Complaints Involving
Fundamental Emissions of Radiocommunications Transmitters." This Document,
called EMCAB-2 was issued as an Electromagnetic Compatability Advisory
Bulletin.
This bulletin places no onus on manufacturers for any respon-
sibility in manufacturing electronic equipment, when it is used in close
proximity to radio transmitting equipment. On the other hand, licenced
transmitter owners comply with very stringent federal regulations for use
of the radio spectrum as a resource. It is only prudent responsibility
to do so.
EMCAB-2 ignores the inconvenience to the consumer and the
transmitter owner when a complaint occurs and obligates them to resolve
an issue, when it is clearly the responsibility of the manufacturer to
ensure its equipment is properly designed.

EMCAB-2 alludes to international standards which are not yet
in effect and simply, by implication, assumes that such standards will
come into force. I believe the Advisory Bulletin will be the subject to
wide misinterpretation. It complicates its actual purpose because it lacks
even a methodology of measurement.

You should be aware that the European Community has begun a
proper approach to resolving 80% of these problems by mandating that all
electronic equipment must meet some specific level of immunity (rejection)
of radio transmitter energy. This will preclude importation unless these
standards are met. Why should Canadians accept sub-standard designs?

There are more than 42,000 licenced radio amateurs, and
THOUSANDS of Commercial Radio Operators in all parts of Canada as well as
countless individuals who reside in close proximity to radio transmitters
could be affected by EMCAB-2. I request that this document be rescinded
and withdrawn and that the first step toward resolving immunity problems
be technically addressed by manufacturers. Responcible engineering design
by manufacturers would obviate the need for EMCAB-2.

Your immediate attention in this matter would be greatly
appreciated.

Yours Truly,

_____

Please Print Clearly: Name:_____

Address:_____

Postal Code:_____

Phone Number:_____

Please send a copy of this document to your local Member of Parliment (MPP)
c/o The House of Commons
Ottawa, Ontario
K1A 0A6

>>POSTAGE IS NOT REQUIRED TO SEND MAIL TO THE HOUSE OF COMMONS<<

Also please give a copy of this document to anyone that you know
that uses a licenced radio transmitter such as Amateur Radio,
Commercial Radio (Tow Trucks/Taxi etc.) EMCAB-2 affects ALL Radio
Operators.

I'd have to agree with Zack, although for a distance of 250 miles you certainly don't need to have a big gun EME station. (Although I don't think that was what Zack was trying to imply.) Based upon personal experience and some charts posted here a while ago by Paul Bock, K4MSG, a 12 dB antenna at 30' with a low noise mast mounted preamp and 160 watts of power should provide very reliable communications on 2 meters SSB. Raise the antenna to 60' and you should have a reliable FM path. A 12 dB antenna on 2 meters is approximately a 15-20' long antenna. So with a fairly modest 2 meter station and a simple technician license, you should be able to talk to your dad regularly.

Zack, what was the equipment used at each of those 230 consecutive contacts?

73,
Todd

>change frequencies?

The SAW filters operate at low power, <10mW, at the exciter IF frequency, so no tuning is needed when changing channels. An external filterplexer can be made from copper pipe. Normally, you'd make that for a fixed frequency, but you could make it tunable by using telescoping sections, IE trombone sections. A filterplexer made using 3/4 and 1 inch copper pipe and 1/4 and 3/8 copper tubing, using styrofoam spacers, can handle 100 watts. For higher power you need to use teflon spacers, and perhaps start thinking about a cooling system. Forced air will probably do up to the legal limit, though water jackets make for a quiet system.

I thought they discontinued that when they were bought out. Perhaps I'm confused.

It's a little confusing. At a hamfest (tpa, fl) last weekend an aes rep told a friend of mine that the kw 733a has an intermod problem and recommended the y 5100. So its interesting to hear of your friends problem. Of course I just bought a 733a so i'm a little more that just a interested bystander.

True, but most FM broadcast radios will receive the channel 6 audio carrier at 87.75 (nominal), which may lead to the confusion that "TV audio is in the FM band".

>running satellite links, after all.

Yeah, the ENG links run with a low modulation index, but you don't get
the big FM threshold improvement, IE CNR and SNR are essentially identical.
With a higher modulation index, you can get a 48 db video SNR for a CNR
around 7 db. There's some tradeoff due to the system noise figure degradation
caused by the wider required IF bandwidth, but it's still a win.

> My FM signal blows doors off of the AM one I used to have at the same
>power.

I'm not surprised, at least if you are talking PEP. AM VSB signals have
a very high peak to average ratio while FM is constant amplitude. That's
a big win, especially for the finer picture details at the higher grey
levels which tend to lose out to the noise worse in an AM system.

To all radio amateurs

SB QST ARL ARLB093
ARLB093 SM election results

Ballots have been counted in the Section Manager election for the Nebraska Section. The results are Bill McCollum, KE0XQ, 203. Todd LeMense, KG0EJ, 187. McCollum was declared elected. His term of office begins January 1, 1995.

Six other Section Manager positions were not contested. The following were declared elected.

Santa Clara Valley, Kit Blanke, WA6PWW.

South Carolina, Mike Epstein, KD1DS.

Missouri, Roger Volk, K0GOB.

Western Pennsylvania, Bernie Fuller, N3EFN.

Southern New Jersey, Bruce Eichmann, KE2OP.

Eastern Massachusetts, David Crocker, W1TMO. In the passing of David Crocker, W1TMO, Phillip Temples, K9HI has been appointed to fill the term.

>does anyone have any information about the HTX202. Bascally any
>modifications
>that can be made etc. Also, the HTX202 looks like it was made by ICOM. Is
>there an ICOM equiv?

First of all, congratulations on passing the exam.

The HTX-202 and the UHF version, the HTX-404, were built overseas by Maxon, for Radio Shack, from a design from ICOM. Radio Shack's rigs are pretty similar to ICOM's 02AT, 03AT, and 04AT models. There are some significant differences, including display and programming, but accessories can be shared. I have both RS and ICOM HTs and switch batteries, speaker mics, and cases back and forth with no problems.

There are NO extended receive mods for the RS rigs. These radios have the best "garbage" rejection figures of any amateur portables on the market right now, by design. Any attempts to "open" the receiver up will more than likely be fatal to the radio. Do yourself a favor and buy a scanner if you want to listen to the fire channels.

The HTX-202 is a good radio. Enjoy it.

Have fun...

John

Hi gang

DNS\>Reminds me of the time my friend and I were talking on the radio and watch
\>Die Hard 2 at the same time. We both noticed the HT's at the same time, I
\>believe they were TH-45AT's but I could be mistaken. Also a good shot of
\>sort of fnacy receiver when the army boys came in. I think it was either
\>Kenwood or Icom top of the line. Couldn't quite read the model number tho
\>:-)
\>73 de Dave, WY2P

They were TH-45at for sure
And they used the display for a plot twist somewhere
when Willys first found one of the rig the guy who plays the
communication engineer in the airport take a look a it and said
something about those units needed a 10 digits code to activate and that
only 6 of the digits are shown on the display leaving millions of
combinations possible
While he is saying that stuff you could see the display of the HT
This display shows that the Kenwwod is right in the middle of the 70
centimeter band !
I was the only one laughing in the theater
Everybody started looking at me and my girlfriend send me a remark about
the hobby taking me too far

And the rigs at the end of the movie in the army truck scene were Icom
receivers as far as I could remember

Next time it will be shown on tv I will tape it to look at the rigs in
slo-mo lather when my girlfriend will not be around

HH> Hey gang, can we take this discussion to rec.radio.amateur.policy -
HH> pleease?

I second the motion. How many times do we have to read the
same set of arguments? The controversy belongs in the policy
group and those that are interested can carry on there.

I first was licensed in 1936 and believe it or not, the same
arguments were being made then. The only difference was that
the AM alternative was expensive and there was a depression
going on. But I wanted to get on the air, so I did what had
to be done.

When incentive licenses came along and working SSB in some
of the best DX parts of the bands required an Extra Class,
I did that too. And while I occasionally work CW, except
for Field Day, not much. So what else is new?

I disagree. I'm a ham. I'm also involved with public safety. The ability to monitor public safety channels on my ham HT (and mobile) is critical to me. Carrying around a seperate scanner is inconvienent, and there's no reason for it. Hams are trying to convince us that it's "the only way" if you want good intermod rejection.

I have used countless pieces of Motorola gear (both mobile and handheld) that do the wide frequency spreads I'm after (430-512MHz) with NO intermod problems. Same goes with VHF-Hi band. With good design, a wide band radio with good intermod rejection can be created. The big question is: Do hams want to pay for it?

I've been sort-of shopping for a mobile for about two years now. I can't find anything I want to buy. I see something that looks good, and then hear the real story about it. The Kenwood radios are plagued with problems, including major software glitches, which should have never made it past the prototyping stage. The Icom seems to make it farther, with a "working" radio, but with intermod problems just like the others.

One of my favorite radios on the market is the Motorola MaxTrac 300 (GM300) mobile. It's simple, offers 16 channels, high speed scan with different priorities, and works solid. So why don't I buy Motorola? Because it's a pain to program (fine for public safety channels which I don't change, but a hassle when I'm traveling and want to put in a new ham freq), 16 channels isn't enough, and it's not dual-band. Two radios (VHF and UHF) kinda defeats the purpose, since I want to have the ability to crossband.

So I keep looking. But I think that saying, "They need to make them with only a 4MHz spread in order to eliminate intermod" is a lot of bull. The commercial rigs cover huge bandwidths without problems. Why can't the ham rigs?

>>The commercial rigs cover huge bandwidths without problems. Why can't the ham rigs?<<

Because the amateur marketplace is very price sensitive. Toughening up the front end for wideband operation, while still maintaining good sensitivity, would add about 20% to the build cost of a typical mobile rig, and a whopping 60% to the cost of an HT. These are figures I got from a designer for one of the "big three" vendors.

That means a $400 mobile radio would cost $480, or a $350 HT would cost $560. The low sales volume at those prices would reduce economy of scale and the cost would actually be an even higher figure.

3001. 160 Meters

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-23 19:24:43 UTC
From: popo@radioman.hernix.org
Message-ID: <1994Nov23.192443.242@radioman.hernix.org>
Source record: 256306

Last night at about 2100 EST I heard a station in the 160 meter band on 1860 Khz. The station was using Amplitude Modulation and was giving Amatuer Radio news much like an all news radio station. When did the rules change that allow this?? And does anyone know where the station was. I think it was Missouri but I wasn't by the radio all the time and I never got the call sign. Here in Cleveland, Ohio they had a very good signal.

I respect, and do not agree with, arguments such as
the above (a response to my earlier comments), as
partial justification for the CW requirements. I
understand that CW at times can be an advantageous
way to communicate. And I'm inclined to agree that
"best" hams probably are capable of designing and
building impressive pieces of equipment. I also
believe that "good" hams are and must be fluent
enough in theory to diagnose problems and improve

"system" performance. I thoroughly agree that the knowledge tests should be "substantial" for entry and increasingly demanding for the higher licenses. Finally, I think it is easily understandable that people who earned something "the hard way" would be reluctant to see something they value be dismissed as optional or of marginal interest (this is NOT to suggest that's one reason to Mike's view).

However, I cannot believe that excercises such as building a CW HF rig, or passing the "code" test, is a reasonable requisite for acceptance to ham ranks, or some type of culturally-required rite of passage to enter the ranks.

I've been an "experimenter" in electronics for years, and have built many kits and fixed (or at least diagnosed) electronics in various pieces of equipment. I've built an oscilloscope, as a recent example (no, I did not design it and make it from scratch). I trained myself, almost entirely, having had no formal electronics schooling, because I enjoyed the learning and the challenge. (Isn't that among what good hams say they seek?) I still have woefully more to learn than I'd like, ideally, but I've also learned enough to satisfy most of my (current) needs. I appreciate the arguments that "respectable" hams should have a good understanding of theory and practice, and realize that there always is room for argument about how much and what kind are "appropriate".

Nevertheless,

I've no interest in sending/receiving CW, and I believe that being forced to learn it contributes nothing to my suitability to become a member in good standing of the ham community.

73 to all, whether we agree or not
Tony

ps: ordinarily I'm not much of a "talker", and certainly not prone to enjoy unproductive arguments (other than those agreed to be philosophical), so this post is not to continue this thread. If anyone has NEW arguments for the CW requirement, ones not given in this forum during, say, the last six months, I'd be eager to hear them.

I just saw the movie.. And although I agree, Kurt and his men were definately using ICOM radios, I thought it was a W2A (which just happens to be the model I have) maybe that was just wishful thinking on my part.

: pretty similar to ICOM's 02AT, 03AT, and 04AT models. There are some
: significant differences, including display and programming, but
: accessories can be shared. I have both RS and ICOM HTs and switch
: batteries, speaker mics, and cases back and forth with no problems.

re: Icom speaker mics.
I am using an older Icom HM 9 type mike. It had a 33K ohm PTT
resistor which I had to change to 2.2K in order to key the HTX 202.
A more recente HM 9 has the 2.2 K resistor. I got a schematic
from Icom of the HM 9 / CM 9 and it shows the resistor is 33 K ohms.
Enjoy

>A suitable VSB 10 watt transmitter could be marketed for around $400,

Wasn't that about what AEA was selling theirs for?

>but I happen to think that VSB TV on 420 MHz is a bad use of resources.

Well....I can accept that there's room for *one* 6 MHz channel on 420.
There's enough benefit from making it easy for folks to receive ATV with
unmodified cable-ready TV sets for that, especially since
properly-engineered ATV can coexist peacefully with narrowband FM in most of
that channel. There are a number of links running on 423-424 MHz in the
Dallas area, and there's quite a bit of ATV activity on 421.25.

Basically, I think the ground rules for coexistence are simple:
1) Only one channel.
2) Preferably, only repeater outputs or other well-financed, controlled
uses.
3) Real, live, broadcast-quality VSB filtering, to keep all radiation within
that 6 MHz.
4) Horizontal polarization for ATV, and vertical for others.
5) Separate aural transmitter, combined into the antenna.
6) No narrowband users in the lower 2.5 MHz of the channel.

I would expect that 421.25 would be the one channel in use nationwide except
where local conditions prohibit it.

>I'd prefer that amateurs switch to FM TV on the higher bands.

As would I; not only for the good reasons you provide, but also because it's
good amateur spectrum management, and would help to make use of those bands.

>I can build a 1 watt 2.3 GHz FM video transmitter
>for under $100. Even cheap amateurs should be able to swing that.
>And because the modulation is symmetrical FM, a good old Class C
>amplifier can follow the transmitter without garbaging up the spectrum.

I understand that the Houston Amateur TV Society is working on a 1.2 GHz FM
transmitter for approximately $60. I know little more than that; you might
drop their president, Ed Manuel, a note at n5em@amsat.org. (It's a
Compu$erve address, ultimately, so please don't flood him...)

Source record: 256307

I am trying to find a conductive lubricant that can be used in a number of aerospace antenna applications that we are contemplating. The material should be capable of working as low as -55C. Ideally, the material will not contain metallic particles (most of the greases that seem to fit our requirements contain fine metal power which is abrasive). I have heard of a clear lubricant called "Dow Corning 2X/4x" but the Dow lubricant people say they never made such a material. Any leads will be highly appreciated. Thanks.

Ummm, don't you think that a city or county or state museum (I think that was the situation) is up against federal pre-emption if they try to restrict licensed operators of an FCC authorized radio service?

If this ever happens to me, I think I'll try "Here is my federal license.
Federal law does not allow a state or county or city to restrict licensed
operations unless there is some overriding reason why radio transmissions
can not be allowed at a particular place or time. What is that reason
and what is your badge number and may I speak with your supervisor, please?"

I'll post a follow-up from L.A. County Jail and let you know what happened...

People today think that HT's are portable cellular phones. My 9-year old Tech Plus son carries a Standard 220 MHz handheld that could easily be mistaken for a cellphone, and many of his friends think that's what it is. And *lots* of people in airports carry cellphones, so I'd be surprised if either security or anyone else gave an HT a second glance.

Nope.

Your license simply says you are allowed to establish an amateur radio station at at certain location (indicated on the license). You are further allowed to operate that station at "portable" locations, subject to the consent of the owner of the property at your portable location.

For instance, virtually all airlines will prohibit the establishment of a portable radio station aboard their aircraft.

Many business establishments (especially places of public entertainment) prohibit radio transmitters on their premises.

In a nutshell, anytime you are not on property which you own and control, the owner of the property can prohibit you from establishing a radio station on their property. Your federally issued license does not pre-empt the property rights of others, including the publicly owned property.

Radio Shack sells a 5-element yagi designed for FM broadcast reception.
The cost is about $17. I haven't compared it to a standard (log-periodic) TV
antenna, but I'm sure the yagi has more gain and attenuates multipath better.

With the antenna in my attic, I get full-quieting stereo reception of
classical and "public" radio stations 40 miles away. These stations were
unlistenable in stereo mode with an indoor FM dipole due to the wide dynamic
range of the program material.

It was the best money I ever spent on an antenna.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 23/2330Z NOVEMBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 23 NOVEMBER AND FORECAST FOR 24 NOVEMBER - 26 NOVEMBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 78/17

GOES satellite data for 22 Nov
Daily Proton Fluence >1 MeV: 1.9E+05
Daily Proton Fluence >10 MeV: 1.2E+04
Daily Electron Fluence >2 MeV: 4.5E+07 (normal)
X-ray background: A1.9
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
24 Nov 25 Nov 26 Nov
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 24 Nov: 76/14

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 22 Nov
Learmonth 5 2112 2212
Fredericksburg 4 6
Planetary 5 6

Observed Kp for 22 Nov: 1313 1111
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
24 Nov 8 Quiet
25 Nov 30 Active to minor storm
26 Nov 30 Active to minor storm
COMMENT: IPS Geomagnetic Warning 9 was issued on 23 November and is
current for interval 25-27 November. A significant increase in
activity is expected 25-27 Nov due to a coronal hole.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
23 Nov fair-normal fair-normal fair-normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
24 Nov fair-normal fair-normal fair-normal
25 Nov fair poor-fair poor
26 Nov fair poor-fair poor
Degraded conditions are expected 25-27 Nov, in association with
forecast geomagnetic activity.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
23 Nov 10 near predicted monthly values

Predicted Monthly T-index for November: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
24 Nov 20 Near predicted monthly values
25 Nov 50 15 to 30% above predicted monthly values
26 Nov -20 15 to 30% below predicted monthly values
COMMENT: IPS HF Communications Warning 11 was issued on 23 November
and is current for interval 25-26 November. Sporadic E layer was
regularly observed yesterday at low and mid lats and is expected
again today. Propagation conditions appeared fair to normal at low
and mid lats and are expected to remain so today.

3019. Maritime Communications

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-24 00:15:04 UTC
From: jeffrey@kahuna.tmc.edu
Message-ID: <Czqwp4.lv3@news.Hawaii.Edu>
Source record: 256222

I've been flooded with requests for my series about 500 kHz and
maritime communications. If no one complains I'd like to post
the series on here, say one part every couple days.

As I mentioned before, this series has been published in several
amateur club bulletins, and will be included in a book someone
else is writing dedicated to maritime communications.

I'm surprised at this wide interest in this stuff; I hope it will
give you some insight into the Coast Guard radio corps and into
maritime CW - you'll see that amateur and maritime CW proceedures
don't differ much.

The first part is an overview of a typical Coast Guard radio station;
the remaining parts are devoted to the international calling and
distress CW frequency: 500 kHz.

Jeff NH6IL

****

Subject: 500kc series

Copyright c 1994 by Jeffrey Herman
All Rights Reserved.

The following series is for the historical record. We are witnessing a
never-to-return era of communications style and format that was so
perfect that nothing will ever be its equal. I am very glad that I was able
to be a part of it, if only for three years.

Part 1. US Coast Guard Radio Station Honolulu (Callsign: NMO)

In July of 1977, as a 3rd Class Radioman Petty Officer for the U.S. Coast
Guard, I received orders to report from Coast Guard Group Monterey, CA, to
Coast Guard Radio Station Honolulu in Wahiawa, Hawaii. I had graduated from
Radioman School a year earlier concluding 5 months of training in code,
propagation, radio fundamentals, ITU procedures, and other such things.
22 words per minute was the minimum code speed needed to graduate; mine
was 25.

Radio Honolulu, NMO, is situated on a huge plot of land owned by the Navy,
centered in the pineapple fields of Oahu. In addition to NMO, the Navy
and the Marine Corps had their Central Pacific Communications command
there also. By the way, NMO has the longest overwater microwave link
in the world: Oahu to the island of Kauai (for VHF marine band ops).

NMO was set up with the following glass-enclosed operating positions: 500kc CW, HF CW, HF and VHF voice, air-to-ground, RTTY, Fleet Broadcast, landline TTY, and the Chief's desk. From where the Chief RM sat he could watch all of the ops to make sure no one fell asleep; whoa to the operator (op) who was caught sleeping while on watch!

The Coast Guard is the only military service that communicates directly with the public. Thus we had to know when to turn off the military radio jargon, in particular on 2182 kc (MF international voice calling and distress freq) and ch. 16 / 156.80 Mc (VHF international voice c & d freq). The voice op was kept busy monitoring over a dozen voice channels: 2182 kc, the 4, 6, 8, 12, and 16 Mc high-seas SSB ship to shore freqs, four VHF repeaters for ch. 16 (NMO had a repeater on Kauai [the above microwave link], Oahu, Maui, and the Big Island, four repeaters for VHF ch. 23, and whatever else the Chief felt needed to be listeded to. Several times each radio day the voice op had to make broadcasts (WX, Notice To Mariners, etc) on all these frequencies (the timing was critical so the clock had to be checked frequently).

The HF CW position required 2 ops each with two racks consisting of four Collins 651S digital readout receivers scanning the CW calling bands on 4, 6, 8, 12, 16, and 22 Mc. Daytime hours one op would take 8 and 12 - the other operator would take 16 and 22; night time one had 4 and 6 - the other would have 8 and 12. So, an operator might have 8 Mc scanning in his left ear and 12 Mc scanning in his right (the rcvrs automatically scanned a preset band of freqs, for example the 8 Mc calling band for ships calling shore stations runs from 8360.4 to 8374 kc).

A ship calling us might have to send our callsign 20-30 times (no 3X3 format here!) while our rcvr scanned - then the NMO op would hear, from the highest to lowest to highest notes possible (within 1-2 seconds) our callsign being sent; he would quickly shut off the scanner, tune in the ship and turn off our CQ tape (when no traffic is being passed we'd keep the xmtrs busy sending:
CQ CQ CQ DE NMO NMO NMO QRU QRU IMI OBS AMVER QSS 4 6 8 12 16 22 MHZ AR
- sort of an advertisement for traffic), and the exchange might go some thing like this:
DE NMO
NMO DE KNFB OBS 8360 K
KNFB DE NMO R UP
UP
EE
EE
meaning the ship has a weather observation (every 6 hours starting at 00Z every ship worldwide takes an OBS and passes it, at no charge, to the closest shore stn), and he wants me to listen for him on 8360 kc; he'll continue to listen to me on NMO's fixed transmit freq. Notice the sig UP meaning `I'm shifting up to that freq'. An exchange ALWAYS ends with `dit dit' (and hams thought they invented that!).

The above was rare, for during the obs hour not just one ship would call but dozens and dozens would be calling (in both ears with the rcvrs scanning!) so the NMO operator would have to line them up numerically:

KNFB DE NMO UR NR 1
R 8360 TU
WSLH UR 2
R 12561 TKS
7XYM UR NR 3
DE 7XYM 8368 R UP
...
JGFD UR 25
OK UP 8375 TU

then the op would copy the WX obs from each ship one by one. After working that group of 25 ships he'd turn on the CQ tape and the scanners again, and dozens more ships would pounce on him.

Since WX is time-sensitive it was a race to `collect' as many OBS as humanly possible; a lazy op might only get 100 during the 30-45 minute period.

End of Part 1.

The remaining parts will be devoted entirely to 500 kc.

Jeff NH6IL

QST de W1AW
DX Bulletin 71 ARLD071
From ARRL Headquarters
Newington CT November 23, 1994
To all radio amateurs

SB DX ARL ARLD071
ARLD071 DX news

The items in this week's bulletin are courtesy of Rudi, DK7PE, Rob, ND3A, Jacques, W2/F2YS, Tedd, KB8NW, the OPDX Bulletin, the Yankee Clipper Contest Club PacketCluster network and the Contest Corral Column from the pages of QST magazine. Thanks.

VIETNAM. Rolf, SM5MX, aka 4S7MX and 5Z4MX, is active from Hanoi signing XV7SW. Listen for his fixed frequency CW on 3505, 7033, 14016, 14021, 21019 and 28016 kHz. QSL via Rolf T. Salme, Embassy of Sweden, Box 9, Hanoi, Vietnam. Rolf is making plans to be active in the CQWW CW Contest on 3505 kHz.

NEPAL. Willi, OE7KWT, is signing 9N1WT using the station of 9N1KY. He uses 21270 and 14270 kHz around 0800z but has been on the 14226 DX net around 1145z. QSL via OE7KWT.

SAUDI ARABIA. Ops Terry, N4KT, Bengt, SM0CCE, and Thomas, SM0CXU, will operate HZ1AB in the CQWW CW Contest.

TUNISIA. JH2CFD, JF2EZA, JR2RVL and JL2OYI are instructing Tunisians on amateur radio operations and plan to set up a club station. Equipment will include a monobander on 15 meters, a tribander, dipoles for the low bands and barefoot transceiver. The club call sign is 3V8BB. Try 14025 and 14195 kHz around 0700z. QSL via JF2EZA.

GLORIOSO. Jacques, FR5ZU/G, will be going home on December 1. It was reported earlier that the departure date was December 8. Listen for him on SSB daily on 28480 kHz at 1500z or 21256 kHz at 1600z. QSL via VE2NW. Henri, FR5ZQ, who is also on the island at this time, will take over for Jacques and is expected to be active through the end of the year. QSL via CBA.

JERSEY. Rich, K2WR, will be active from the Channel Islands for the CQWW CW Contest. Listen for GJ/K2WR or GJ0/K2WR on 160, 80 and 40 meters. QSL via K2WR. Cards for his May 1994 40 meter WPX jaunt as GH3DVC should go via GJ3DVC.

DOMINICA. Former W1AW DX Bulletin author Paul, K1XM, is heading up a Multi/Multi operation for the CQWW CW Contest. The operator list includes Charlotte, KQ1F, John, K4BAI, Walt, AC1O, Bill, G4WJS, and Bruce, G4WVX. Listen for the call J77J.

ANGUILLA. Barry, WR3Z, and Rob, ND3A, will be at the QTH of VP2EHF and VP2EE November 21 through 29. Barry and Rob will be in the CQWW CW contest as VP2EZA. Outside of contest hours, listen for VP2/WR3Z and VP2E/ND3A on SSB and CW, 160 through 10 meters, with some novice band operations as well. QSL contest QSOs with VP2EZA via ND3A. QSL other contacts via home call signs.

MARTINIQUE. F6AOI, F6BFH and F9IE, who were recently active from J8, will operate from Martinique as TO0P until November 27. They will be on 40 through 10 meters with CW and SSB. QSL via F6BFH.

KERMADEC ISLAND. Barry, G4MFW, aka ZS1FJ, has obtained a license and plans to operate for two weeks starting sometime in March. Arrangements for a stateside QSL Manager are being made.

TAIWAN. Tom, WB4IUX, received approval for his trip and has a firm schedule. He plans to arrive on November 28 and operate for 4 days starting on the 29th. Try at east coast sunrise from 3508 to 3512, as well as 7008 to 7012 kHz.

GOLIST NEWS. Jay and Jan O'Brien of the ''The W6GO/K6HHD QSL Manager List'' have decided to retire after many years of dedicated service to DXers. Paul and Nancy Smith, N4FFO and KB4RGW, will be taking over the QSL Manager List, aka The GOLIST, so the SHOW/QSL and SHOW/GO functions on PacketCluster will remain intact.

PIRATE'S COVE. Rudi, DK7PE, phoned the DXCC Desk on November 22. claiming that stations ST0CW and SU2CW that were on the air November 11 and 12 were pirates. They gave DK7PE as their QSL manager.

THIS WEEKEND ON THE RADIO. The choices for operating events this weekend couldn't be much more different. Rules for the ARRL International EME Competition appear on page 128 of September QST, and info on the CQ World Wide CW DX Contest appears in the same issue, but on page 126.

Just got off the phone with a kid that's visiting the area from Gainesville, FL.

He's 11, wants to take a novice exam, but missing the exam last week and also Cocoa Beach on monday...

He lives in Gainesville, FL - and i'm coming up blank on finding exams in that area. you'd think the area with the University of Florida would have something going on.

If anyone's got any leads, drop me some e-mail at wnewkirk@iu.net or at w.newkirk@genie.geis.com. I don't know if i'll be able to get an impromptu session going given this being the holiday weekend and all.

thanks es 73..(BTW the kid sounds really sharp on the phone...)

rhall@cmsa.gmr.com wrote:
: Test sorry!

here at the Space Coast Amateur Technical Group we've never been one
to pass up a challenge.

we tested Parker Bros. Sorry! - manufactured approximately 1968 or so.
we found it was fun to operate, but we were unable to measure sensitivity
or selectivity as well as power output.

We also found that the P. B. Sorry would only support 4 individual
conversations at one time.

Controls were grouped by color and extra control parts were included (3
of each color) in case any were lost.

P. B. Sorry takes up about a square yard of desk surface so it won't fit
in many operating positions and you have to have the space above the
control surface free to work the controls.

All in all, we found P. B. Sorry to be a poor choice for the new ham
looking to acquire that first radio - although the under $20 price
certainly is attractive and many have been sold over the last 50 or so
years -- sadly most of the antique P. B. Sorry units have been disposed of.

We recommend the Yaesu FT-2500 instead as a replacement.

Sorry! (no i'm not))

No. They are free to say 'you can't bring that thing in here.' Regardless
of what the 'thing' is. You are free to choose whether you go in, or stay
out.

Schools ban beepers and cell-phones, which are also FCC-authorized. The
license doesn't give you an absolute right to take your radio where you
want in all cases, or to transmit (or receive) on any property whatsoever.

clevelan@teleport.com wrote:
: Hi All,

: I'm going to purchase a "top end" mobile dual band (2 meter-70 cm). The
: question is - which one.
: Money is not to much of an objective - performance is.

I've spent a while looking for a new 145/130 MHz radio. I've changed my car and would find a remote-panel job easier to fit and hide. My prime objective was to equal or better my existing radio. My search is over, I've reached a conclusion. I got hold of a variety of candidate radios and actually measured their performance.

: I've been seriously considering the Yaesu 5100, but have heard a mixed
: review of it's performance.
: It would be preferable that which ever radio I purchase have the ability
: to be modified for out of band operation.

This blows your performance objective right out of the water, I'm afraid. Radios that can be modded for out-of band receive have either wide open front ends, or else a varactor-tuned front end filter. These are both far inferior to the older style fixed amateur band only front-ends. Even if you don't do the mod, you still get the overload, blocking and intermodulation disadvantages - all the mod does is change a software limit on the frequency data that can be sent to the synthesiser.
Transmit sides are usually OK, but on this class of radio, you won't be far wrong if you think of a nasty scanner having replaced an optimised receiver.

: I currently own a Yaesu FT 530. I like this unit very much.

You may find it acceptable on a small antenna, or if you live in an area with little use of the surrounding spectrum, but you may find it interesting to try the effect of a large antenna in a busy environment.

: IF you could help by recommending a radio for me to purchase, I'd be grateful.
: P.S. I'd like it to be able to decode PL tones and generally have at least
: all of the features of the Yaesu FT 530 +.

Your mention of performance makes this difficult. There has been a general change of target for VHF/UHF radios over the past several years. The majority of amateurs have become more knowledgable of features like crossband repeat, coded squelch, remote control etc etc, and less knowledgable about basic radio performance. The manufacturers have responded with boxes containing more bells and whistles, more

conveniences and better ergonomics but less radio. This is not intended as criticism of most amateurs, for it takes access to decent test equipment to spot these problems, or careful A/B tests in demanding conditions. Just trying a single radio doesn't show up a compromised receiver. If you can't hear something you probably never know.

I've looked, I've looked hard. I've found nothing that isn't outperformed by my old TW4000A. I discussed this with the main UK trio/kenwood importer at a rally last Sunday, and they said they could offer nothing to replace it with equal RF performance. I think I'll order up a new front panel to smarten it up again and bite the bullet.

Your choice is whether the features you like balance a drop in the ability to receive if there are other signals about.

I'm sorry, but there isn't much choice to be had, they all seem to have gone the more-gameboy, less-radio route. I too would enjoy the advanced features, but I'd like to keep the full radio performance.

Cheers
David GM4ZNX

3041. ** WANTED ** Latest version of JNOS for DOS

Newsgroup: rec.radio.amateur.misc

Hi,

I am looking for the the latest version of JNOS for DOS !
Can anyone tell me where I can get it on the net ?

Thanks in advance E-:-)

This address should still work till 1/1/95, however, it is changing:

*** Please note updated information about the WB7TPY Gateway ***

The internet side of the gateway has a new address; instead of sending
mail to:

gate@wb7tpy.ampr.org

The new address is:

gate@stat.com

Please let your friends and gateway users know the new address asap.
The old address will go out of service on January 1, 1995.

>about the inevitable intermod.

What you say is true for current models, but there is a way to make
mobile rigs wide coverage and still reject intermod. It requires
careful design, and a stiff standing current in the RF front end of
the radio, but it can be done. For HTs, alas, the high current required
would consume the batteries in short order.

Farinon (Harris), Microwave Associates, and Microwave Radio Corp, seem
to dominate the ENG market. There are also lots of Linkhurt, Tepco, and
RCA units still in use for fixed links, and the telcos dumped tons of fixed
microwave stuff when they moved to fiber. If you look around a bit,
you can find this stuff for pennies. I grabbed 9 duplex microwave links
from a GA Power auction when they converted their switching systems to fiber.
All worked, all had manuals, etc, conversion to handle video is fairly trivial.
I also got several dishes (6 footers with feeds and mounting hardware), a
bunch of 900 MHz gear (19 pieces), etc. It pays to haunt surplus auctions,
but be prepared to buy in large lots. It cost over $1000 all told to get the
lot with the radio equipment, but the unit cost was trivial. I dumped a
bunch of it at Dayton, but still have some 900 MHz Motorola MR96 and
Grainger 900 MHz equipment out in the barn. They're complete with duplexers,
and would make nice repeaters.

I also hit the Eastern Airlines bankruptcy auction, and came away with
some 1 kW VHF AM transmitters (would make fine 2 meter amplifiers), and
some 1 kW HF SSB systems for pennies on the dollar. Got some nice test
equipment too, IFR, Bird, Tek, etc.

I can agree entirely with all of this, though I'd slide the video carrier up to 421.50 MHz to allow a *little* slop. Crossband repeaters *are* easier to build for the wide ATV signals, and having an output on 420 MHz to grab the newbie with a passing interest is not a bad idea. I don't want to see ATV clobbering the weak signal and satellite band segments, however, and that's what happens when the two higher channels are in use by amateurs with poor technical skills.

>Compu$erve address, ultimately, so please don't flood him...)

Oooh, that's a tough price point. The design I'm talking about uses
an on-channel VCO with a PLL loop stabilizing it to a crystal in the
20-25 MHz range using sampled AFC synced with video H sync tips. Using
surplus parts, it can barely fit in $100.

W1AW does it, so other amateur stations can too. Using AM seems a bit gauche until you realize that top band still has a good number of AM enthusiasts. There's a fair chance the station is using a retired Standard Broadcast transmitter. I used to know a few guys who had those, including me.

I agree with all you say, except the last clause of the last
sentence. *You* own public property, the government is just
your property management agent. I know they like to get uppity
and act like the real owners, but that's the very time you need
to slap them back into their place as *your* employees.

It is very easy to record a selected portion of a TV program with a VCR for any station, time, day, etc. Is there a device that allows one to do this for AM radio? How about even a timer that starts a recorder and turns on the radio that is preset to a particular station?

Any other news groups where it makes sense to post this?

3056. >> Survey Results: 6M AM <<

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-24 17:50:17 UTC
From: rbellville@aol.com
Message-ID: <3b2jop$mr9@newsbf01.news.aol.com>
Source record: 256206

FROM:
Rob Bellville, N1NTE
PO Box 515
Millbury, MA 01527-0515
email -> rbellville@aol.com

SUBJECT:
6 METER AM SURVEY RESULTS as of 11/23/94

I wish to thank all the hams who contributed to this survey. Most of the information came from people via the Internet. I am also looking to update this survey so please forward any relevant information my way. Thanks!

I received many types of responses to this survey. They ranged from "I really enjoy operating 6M AM." to "6M AM is dead and gone." I believe the differences in opinions were mostly due to geographical issues. It seems that some areas of the country have little or no activity and others a fair amount.

Six meters is an band that is beginning again to gain some recognition from equipment manufacturers. The late 1950s and into the 1960s seemed to be the most popular era for the manufacture of AM equipment. Although these rigs are definitely not state of the art, they do lend to a nostalgic feeling analogous to driving an antique car. The old jalopy may not be fuel efficient or full of luxury features but it's fun AND different!

At hamfests all across the country you can find AM equipment at very reasonable prices. For as little as $20 you can pick up a working radio ready for an antenna. What other band can you get on the air so cheaply? Searching the flea markets with your friends you could start AM activity in your area for less than the price of a new 2M HT! String up a simple dipole and go!

Some of the AM rigs have VFOs but most require crystals for the transmitter. Crystals run about $8 to $10 each and can be obtained thru most

crystal manufacturers. This is not a big concern since most of the AM activity is on 50.400 MHz (the national AM simplex frequency on 6M) so only one frequency is usually required.

Here's a list of some of the equipment hams use on 6M AM and their price ranges:

Gonset Communicator III $20 to $50
Lafayette HA-460 $20 to $95
Clegg '99er $35 to $75
Globe Scout Deluxe n/a
Ameco TX-62 $50 to $85
Heath Seneca $50 to $75
Heath Sixer $20 to $35
Heath Shawnee (HW-10) $45 to $85
Johnson 6/2 $35 to $65

(Note: Please send me additions to this list!)

Most of these old beauties require occasional adjustments to the receiver's VFO since drift is unavoidable. Heat from the vacuum tubes can cause drift but fortunately AM signals are wide enough that precise adjustments are not necessary.

Six meters is a band that needs exploring. While equipment for FM is becoming more popular, SSB rigs are still pricey. There's 4 MHz of space on this band (equivalent to 2M) so there's plenty of room for adventure. There are also many openings that allow long distance communications so that one minute the band may be quiet and the next a station 600 miles away is booming in loud and clear.

So give 6M AM a try. It's a great way to get your feet wet on a new band. We need more activity here so that more modern equipment becomes available at better prices. Encourage other hams in your area to try 6M AM and get a net started. You'd be surprised how many of them have rigs collecting dust in the closet!

Please feel free to send comments, additions, etc. to me at the address above. I look forward to hearing you on 50.4 MHz! -Rob, N1NTE

Are there any mods for the ICOM 2GXAT to permit extended receive
covering 138Mhz to 174Mhz? We are primarily interested in receiving
local police/fire channels.

Would appreciate info on any hardware or keyboard sequence mods.

Thank you.

3061. GB2RS News 27th November 1994

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-24 18:55:44 UTC
From: dave@llondel.demon.co.uk
Message-ID: <785728544snx@llondel.demon.co.uk>
Source record: 256213
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.info

Good morning. It's Sunday the 27th of November and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

Now this week's headlines:-

SSL is to continue issuing amateur radio licences;

The RSGB AGM is next Saturday; and

RSGB Council votes must be in by Tuesday.

The Radiocommunications Agency has announced that following a careful examination of all the proposals received, they have concluded that the contract to distribute Amateur Radio licences should, once again, be awarded to Subscription Services Limited (SSL), initially for a three year period up to 31st March 1998. The RA has sent all licence holders a letter with details of the new arrangements. SSL has also been given the contract for CB licensing.

Radio Communication magazine should be posted to all RSGB members during the coming week. The Society apologises for the lateness of this edition.

This weekend, the HF bands will be crowded with CW stations for the CQ Worldwide contest. This should provide much activity and many exotic calls on all of the non-WARC bands.

RSGB members are reminded that the ballot papers for Council nominations must be received at RSGB Headquarters by 12 noon next Tuesday the 29th of November. The ballot paper and proxy voting form are part of the Society's Annual Report and Accounts which was posted to all members on the 17th of October.

The Annual Meeting of the Radio Society of Great Britain will take place at the Royal Society of Chemistry, London next Saturday the 3rd of December starting promptly at 2pm. Full details, are in the RSGB Annual Report, sent out with November's RadCom. Members are reminded that the venue is in central London so car travel is not advised.

The meeting comprises the AGM, an Extraordinary General Meeting, and an informal session. Full details of the EGM, which concerns changes to the Articles of Association, can be found in the RSGB Annual Report.

Doors open at 12 noon when there will be an RSGB book stall and light refreshments. Members should bring their membership cards with them.

A new GB2RS News Broadcast on 70 Centimetres starts today, Sunday the 27th of November. The broadcast will take place on 433.525MHz, channel SU21, using FM, every Sunday commencing at 2000 UTC from G4OBE in Enfield, north London.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

From Vietnam, SM5MX expects to operate as XV7SW, CW only on the following spot frequencies:-, 3.505, 7.033, 14.016, 14.021, 21.016, 21.019, 28.016 and 28.019MHz.

From Taiwan, BV/WB4IUX expects to be active for a short period, from now until the Wednesday the 30th of November or during early December, on 80 and 40 metres CW only.

From Ghana, G3SXW will be active as 9G5AA during the CQ WW Contest from Accra as a member of a multi national group. Outside the contest G3SXW will air the callsign 9G5SX until Wednesday the 30th of November on all bands.

Next the Rally we know of for today, Sunday the 27th of November:

The Bridgend Radio Rally is being held at the Bridgend Recreation Centre. From the M4, take junction 35 or 36. Doors open at 11am, or from 10.30 for disabled visitors. The event features a bring and buy stall, and an RSGB Book stand. RSGB Morse Tests will be available on demand but remember to bring two passport size photographs and the necessary fee. Refreshments will be available and talk-in will be on 2 metres, channel S22 and via GB3MG on RB7.

The West Manchester Radio Clubs Winter Rally is being held at the Bolton Sports and Exhibition Centre, Silverwell Street, near Bolton town centre. Doors open at 11.00am or 10.30 for disabled visitors. The event features the usual trade and club stands and a bring and buy stall, all at pavement level.

We know of no event for next Sunday the 4th of December as the Leeds and District Amateur Radio Society Christmas Rally, scheduled for the 4th of December has being cancelled.

The White Rose Amateur Radio Society has pointed out that their event scheduled for Sunday the 9th of April 1995 at Leeds University, has not been cancelled. There appears to be some confusion with the Leeds and District Amateur Radio Society Christmas Rally which has been cancelled. The two events are run by different societies and there is no connection between them.

HF contest news next:

The CQ World-wide DX CW Contest finishes today Sunday the 27th at 2359 UTC. All bands 160 to 10m will be used, but not the WARC bands. See October RadCom page 18 for brief details.

The ARRL 160 metre CW Contest takes place from 2200 UTC on Friday the 2nd until 1600 UTC on Sunday the 4th of December.

Next some VHF contest news:

The first RSGB Winter Microwave Cumulative Contest finishes today, Sunday the 27th of November at 2100 UTC using all bands 2.3GHz and up. See November Radcom page 78 for further details.

The penultimate RSGB 432MHz Cumulative Contest takes place tomorrow, Monday the 28th of November from 2030 to 2300 UTC. For further details see July RadCom page 82.

The RSGB 144MHz AFS and Fixed and SWL Contest takes place next Sunday the 4th of December from 0900 to 1700 UTC. For further details see November RadCom page 78.

And now the solar factual data:

The period from the 14th to the 20th of November saw solar activity at very low levels, with only one small spot region being on the visible disc. No flares were reported. Geomagnetic activity was mainly at quiet levels, but increased to unsettled levels by the end of the period. The sunspot indices showed a slight increase from 11 on the 14th, up to 36 by the 16th, but were declining again by the 20th. The period meaned at 24.

Solar flux levels remained almost stationary at 79 units throughout the period, so averaging 79 units. The declined electron fluence has remained at normal levels. One by-product of this is that the GEOS 6 satellite, which was suffering from electron charging, is now slowly coming back to life. The 90 day solar flux averaged 82 units on the 20th. The x-ray flux which had declined to very low levels saw a general increase every day, from A1.5 units up to A4.0 units by the 20th giving an average of A2.5 units for the period. The state has been 'nil nothing to report'.

The geomagnetic indices remained at quiet levels, the Ap index being down to only 4 units on the 16th. On the 19th levels increased to unsettled conditions and by the 20th a magnetic storm was reported at high latitudes, with an Ap index of 23 units. The period averaged an Ap of 10 units.

The aa indices, as reported by the British Geological Survey for the period from the 8th to the 14th of November, were just unsettled at first up to 29.9 nanoTeslas, then declined to quiet levels by the 11th. The period averaged 17.9 nanoTeslas, about K2. Bartells rotation 2203 began on the 19th November.

The solar flux average for October was 87.7 units and the smoothed value for April 94 was 88.8 units. The geomagnetic average was at an Ap of 19 units with the smoothed level being 17.6 units.

I'll repeat the figures. Spots - 24; Flux - 79; Ap index - 10; x-ray flux - A2.5. October flux 87.7 Ap index 19.

Now the ionospheric data for Central France:

Not all of the ionospheric data is to hand this week but we have data for the period from the 14th to the 18th of November. The F2 daytime critical frequencies at Poitiers, as reported by Meudon, averaged 6.7MHz, with the highs taking place between 12.00 to 13.00 hours. The darkness hour lows averaged 2.5MHz and are around 05.00 hours.

I'll repeat the figures: Highs 6.7MHz; Lows 2.5MHz.

And lastly the solar forecast:

This week, the quieter side of the sun should be coming into view; solar flux levels are expected to decline to the low 80s. Geomagnetic activity is expected to be at sub-storm levels for today. It will then decline to mostly unsettled to active conditions for the rest of the period. Ionospheric MUFs during daylight in the south, are expected to be about 25MHz and for the north 21MHz, but much will depend on the magnetic activity which is expected mainly to affect the north.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G 0 Victor Lima and G 7 Tango Whiskey series, and Novice calls in the 2 0 Alpha Juliet and 2 1 Delta Oscar series.

--

GB2RS is prepared by the Radio Society of Great Britain
and is broadcast in the 80m, 40m, 6m and 2m bands.

3062. TVI suggestions..

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-24 19:27:01 UTC
From: kturner@infi.net
Message-ID: <3b2pe5$enn@lucy.infi.net>
Source record: 256215

I just bought a KPC 3 TNC, and I'm using it with a HTX-202 and a groundplane.. My brothers room is right beside mine, (antenna right outside my window (6 ft).. The tv in his room is hooked up to Cable, (which runs under my room)..
Problem I'm having is, Whenever I transmit 145.010mhz, It totally blanks out HBO, which is Cable channel 18, on 145.250 Mhz.. It only seems to do this to his TV.. I just checked and it also does it when I use a local repeater (145.490 minus)..
Couple questions.. Does this sound like a shoddy cable installation? Can I expect more problems if/when I put up a higher gain antenna and /or amplifier? And finally whats the best way to cure the problem.

Thanks for any suggestions..

: It is very easy to record a selected portion of a TV program with
: a VCR for any station, time, day, etc. Is there a device that allows
: one to do this for AM radio? How about even a timer that starts a
: recorder and turns on the radio that is preset to a particular
: station?

put the audio output from the radio into the VTR. adjust gain for the right level or use an attenuator to knock down the speaker output to input level. turn the radio on, set up the VTR and awaaay you go.

This still doesn't make sense. Do most hams live in rural areas where intermod isn't a problem? "Paging? What's that?" Or do the urban hams simply view intermod as something that's part of life, and that all services are likely plagued with it? Judging from the email I received, lots of folks (albeit a small Internet sample) would pay extra for intermod rejection.

Icom sells equipment for several hundred dollars more per radio than Kenwood. Yet I don't see them going out of business. People are paying more for various features, designs, etc. How many people choose a radio because it has an infra-red mic option? I dunno either, but I'll bet more folks would pay for a strong front-end.

Lou Haas (dx406@cleveland.Freenet.Edu) wrote:

: What is a good handheld that can be modified by people other
: than rocket scientists with phDs in quantum theory?

you don't have to have a PhD in physics, but you do have to have
good technician skills with working with the modern electronics
found in today's equipment.

most people are too timid to go get the right tools for the job
so they cry it's too hard or it can't be done.

of course, many times the cost of the tools is on a par with just
buying something to truly does the job desired in the first place w/o
having to cut into the guts...

Ne> In unceasing articles people continue the code vs no-code arguments.
Ne> I've been watching this for months, without seeing any likely end to
Ne> the polarization of attitudes, or much willingness by the extremists
Ne> to compromise.

The extreme sides will never meet in the middle. Thank God
they are a minoroty.

Ne> I passed the code test at 5 wpm, and now am preparing to pass the 13
Ne> wpm test (and, after that, possibly the 20 wpm). I do that because I
Ne> have no choice, if I am to be licensed do what I want to do, such as
Ne> HF SSB. I do not do it for the sake of learning "code", because I
Ne> don't care a damn about sending or receiving morse code.

Common beginner belief. However it has been my experience
that once an individual masters morse it does not become he
drudgery it first appears. I have held an extra class
license for 15+ years and do not operate CW conversationally
but I do enjoy the CW test or the occasional QSO.

Ne> Possibly someday morse code transmission someday will appeal to me
Ne> too, but that seems very unlikely at this time.

See above. You will be surprised. I just fininshed up CW
Sweepstakes at my shack and as a first was a multi-op
entry. All three guest ops were tech + or less. Since the
test two have upgraded to general and have their eyes on
extra by the end of the year.

Ne> My conclusion is that after the bs is stripped from most of the
Ne> "pro-code" arguments, the most common reason many hams want the code
Ne> requirement retained is to discourage newcomers, to reduce the number
Ne> of people with whom they might need to share the bands. If in fact
Ne> they were right, that requiring code would prevent the vandals from
Ne> destroying ham civilization, then I'd agree. However, it's clear
Ne> that there are undesirables within the ranks of the licensed, people
Ne> that "code" requirements did not filter them out. And I doubt that
Ne> the code requirement prevents many good people from passing the
Ne> tests, even though they (rightly or wrongly) regard the "code" as an
Ne> aggravating anachronism.

As such I'd say your conclusions are flawed. Sure even the
most limiting of test will allow a few scumbags to slip
through the cracks, but the code IMO is a filter that shows
that an individual is willing to finish a task, regardless
of its personal benefit, and to EARN the respect and comraderie

of those he will be sharing spectrum with, sort of a common
bond. Boy Scouts don't give the Eagle badge away, nor
should we give away those cherished operating practices.

<in reference to Gary Coffman's statement>

>>>>Just because NALs positively correlate with Morse Code speed doesn't mean
>>>>that Morse Code causes bad behavior.

I have a considerable amount of trouble with this statement; a dozen
FCC monitoring stations scattered around the US are all that are needed
to hear almost any US ham (all of whom have coded licenses) on HF due
to its propagation characteristics. Thus, any HF lawbreaker will surely
surely be heard if he stays on long enough for an FCC engineer to scan
to him.

Now, how many monitoring sites would be needed to monitor all the
VHF/UHF operators? 100? 200? 400?

I contend that non-coded licensees surely account for more infractions
(due just to their large numbers) but are never caught for the inability
of the FCC to have blanket monitoring coverage of the V/UHF region
nationwide.

> Don't forget, you (like me) sit in
>that boat of "Extra Class" licensees (If only it were universal that we had
>extra class, right? Sorry for the pun.) Are you a sociopath?

Gary's an Advanced licensee, not an Extra.

Hi,

I am looking for information on a type of rechargeable
cell called the MOLICEL which was produced by Moli Energy Limited,
3958 Myrtle St, Burnaby, BC V5C 4G2, Canada, tel. 604-437-6927

Can someone tell me their experiences with this type of
cell and what happened to the company. With its features, why
didn't it supercede the NiCd cells? Is the company still around
and did it fail because of some inherent flaw? Thanks.

I have a friend here in Chicago that was in the same situation as you are.
He lives on the 10th story of a 31 story building. He has an HF rig and
uses an AEA Isoloop antenna with the AEA isoloop antenna tuner. Without
the tuner, it is really hard to recieve anything, however, with the tuner,
it works wonders. If you have any questions, I am sure he will be glad to
answer them. Let me know, and I shall give him you address.

Howdy Keith...
Could be any of the above problems or something as irksome as a poorly sheilded RF section in the TV. I would try running an independent wire from the connector at the back of his set to ground and if that didn't help much, I would try wraping his set in aluminum foil (except for the picture tube of course) and clipping the foil to the ground lead.
Also, you could try relocating your antenna as far from you brother's room as possible.
Good luck... Ted..

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 24/2330Z NOVEMBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 24 NOVEMBER AND FORECAST FOR 25 NOVEMBER - 27 NOVEMBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 79/19

GOES satellite data for 23 Nov
Daily Proton Fluence >1 MeV: No data
Daily Proton Fluence >10 MeV: 1.1E+04
Daily Electron Fluence >2 MeV: 4.9E+07 (normal)
X-ray background: A1.9
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
25 Nov 26 Nov 27 Nov
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 25 Nov: 78/17

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 23 Nov
Learmonth 5 2222 1211
Fredericksburg 4 3
Planetary 5 3

Observed Kp for 23 Nov: 1112 1101
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
25 Nov 30 Active to minor storm
26 Nov 30 Active to minor storm
27 Nov 20 Active
COMMENT: IPS Geomagnetic Warning 9 was issued on 23 November and is
current for interval 25-27 November. A significant increase in
activity is expected 25-27 Nov due to a coronal hole.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
24 Nov normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST

DATE LOW MIDDLE HIGH
25 Nov fair poor poor
26 Nov fair poor poor
27 Nov normal fair poor

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
24 Nov 37 about 15% above predicted monthly values

Predicted Monthly T-index for November: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
25 Nov 50 10 to 20% above predicted monthly values
26 Nov -20 15 to 20% below predicted monthly values
27 Nov 10 Near predicted monthly values
COMMENT: IPS HF Communications Warning 11 was issued on 23 November
and is current for interval 25-26 November. HF conditions are
expected to become degraded over next few days, dueto anticpated
geomagnetic activity. Depressions of up to 25% were observed at
Townsville during daylight hours yesterday. The cause of this
depression is unknown.

>>I think it's somewhat safe to say that many Extras are more competitive
>>than the average amateur. That's one reason they took all those tests. If
>>that occasionally means bending a rule, some may do so.
>
>
>So you're associating high speed licensees with law breakers.

No dim bulb, if that's what I meant, I'd say that it's the obsessive-
compulsive, test taking, Dxing, Morse using, SCUM who are law breakers.
(Now that's hostile, see the difference).

>>There may be another
>>factor at work as well. Some amateurs go for Extra for the status it conveys.
>>That may be compensation for an otherwise unsatisfactory emotional life.
>>That general dissatisfaction may later manifest itself as misbehavior on
>>the amateur bands.
>
>So those that go for the high speed license are emotionally troubled.

Some may be. It's a symptom of emotional trouble to compulsively require
outside measures of self-worth.

>>>Just because NALs positively correlate with Morse Code speed doesn't mean
>>>that Morse Code causes bad behavior.
>
>>Right. I didn't claim that, just that Morse Code speed doesn't correlate
>>with *good* behavior. So it is not an effective filter for good behavior.
>>It may well be, however, that the same forces that drive some amateurs
>>to higher speeds, and higher status licenses, also drive them to sometimes
>>misbehave more often than their fellows. Thus fast Morse may only be a
>>symptom in those people of underlying anti-social traits.

>
>So high speed code operators are social misfits with behavioral
>problems.

Some may be. It's a sign of emotional trouble for people to be obsessed
by mechanisms that isolate them from personal social contact with others.
The neighbors always say, "He was such a quiet man, a loner, who kept to
himself until he snapped and climbed that tower with a rifle."

>That someone would actually believe the above and post it worldwide
>might be indicative of some underlying problems within themselves.

While you, on the other hand, can't be accused of stereotyping, now
can you? How are the bathroom patrols coming?

>If one of the procode proponents had posted the above with ``no
>code technician'' in place of ``extra class licensee'' can you
>imagine the riot that would ensue on here?

Since I expect the code test free Techs to have better reading
comprehension than you exhibit, and hopefully a stronger self-image,
I wouldn't expect much of a reaction at all.

| Saturday, while at a nearby fire station looking at the new engine,
| one of the crew pointed out their personal locator beacons.

| These small devices were designed so that if motion stopped for 20 or
| 30 seconds, they started a loud audible alarm. The firefighters were
| all equipped to track the audible alarm, being equipped with standard
| model ears.

| The audible alarm suffers less from multipath, and needs no special
| equipment for carrying it. It also goes off before the firefighter is
| missed by outside personnel.

| They seemed like a real good idea.

Hi Alan,

Thanks for the comments on the audible alarms. Yes, these devices
are in use by Boston FD too. As Terry explained to me, the amount of
noise in an active fire can be unbelievable. Plus, a firefighter
can fall and muffle the device, or be covered by debris, further
hindering its effectiveness.

Terry is looking for an "RF" solution to augment the current audible
alarms.

: >channel 18, on 145.250 Mhz.. ...

: ... I would try running an independent wire
: from the connector at the back of his set to ground and if that didn't
: help much, I would try wraping his set in aluminum foil (except for the
: picture tube of course) and clipping the foil to the ground lead.
: Also, you could try relocating your antenna as far from you
: brother's room as possible.

The last suggestion is the best one. Forget the ground wire. The tin
foil might work as a last resort, but ground the foil to the coaxial
antenna connector's shell, not the ground lead.

But the first thing to check is the integrity of the TV cable. Especially
check each of the coax connectors to be sure the coax shield is making
good contact. Yank on the connector: If it comes off, it wasn't
installed correctly. Go down to Radio Shack, buy some new connectors and
the proper crimping tool and replace all defective connectors.

That may all you need to cure the problem.

Hmmm, you missed the Gonset G50. This is the big brother to the
Communicator. I have a *mint* one and it is used daily on 6 AM.

>Most of these old beauties require occasional
>adjustments to the receiver's VFO since drift is
>unavoidable. Heat from the vacuum tubes can cause

>that precise adjustments are not necessary.

The G50 is dual (rx/tx) VFOs and has crystal control availability. I
use the Vfos and they do need an occasional tweak to keep 'em on
Frequency. I would NOT sell mine for the whole bag of $$$$.

6meter AM,,,, the MAGIC band!

That's what makes the Tandy/Icom HTX-202 such a great unit. Oh, it ain't pretty, and it doesn't have 200 channels available, and it's not sub-miniature in size. . .but it performs as advertised and it does all we need it to do (packet, hit repeaters, better audio than most any HT currently available).

Because over on .policy the two are synonymous. I contend that 20wpm
is not high speed but Gary et al believe that it is.

Ah, but at least if someone sends R PSE QSY in code in answer to
you're query ``Is the frequency in use?'' you'll understand!

>My conclusion is that after the bs is stripped from most of the
>"pro-code" arguments,

such as: it's the 2nd most popular mode on HF, it provides the
beginning builder an almost effortless route to constructing a rig
from scratch and with it working the world, and all the other ``bs''
we keep spouting off about,

>the most common reason many hams want the code
>requirement retained is to discourage newcomers, to reduce the number
>of people with whom they might need to share the bands.

My contention is that, as mentioned above, it provides the
new builder an easy and cheap way to get on the air. Hopefully,
after gaining experience homebrewing a few CW xmtrs our rookie builder
will go on to more advanced projects and modes.

Constructing CW equipment provides an excellent stepping stone from
theory to practice.

>If in fact
>they were right, that requiring code would prevent the vandals from
>destroying ham civilization, then I'd agree.

With regard to your statement that we want to limit the number of HF hams,
the V/UHF region can accommodate an almost infinite number of operators,
but due its the propagation characteristics, HF cannot. If the code
requirement were dropped tomorrow, our HF bands, filled with 600,000
US amateurs, would be a nightmare (except the CW-only 30M!).

>And I doubt that
>the code requirement prevents many good people from passing the
>tests, even though they (rightly or wrongly) regard the "code" as an
>aggravating anachronism.

Anachronism 1646 1. An error in computing time or fixing dates.
2. Anything done or existing out of date.

Why would you say code is out of date? It's the 2nd most popular mode on HF, and from my QTH here in the Central Pacific my informal counts show that close to 50% of the QSOs are conducted via code.

I think the folks on .misc have suffered enough - let's append .policy to the followup lines.

That's true, Generals, Advanced, and coded Techs all outnumber Extras
on HF, yet Extras have the highest NAL rate. Remember that Extras are
the smallest amateur class.

>Now, how many monitoring sites would be needed to monitor all the
>VHF/UHF operators? 100? 200? 400?
>

>nationwide.

This is possible, however for the Atlanta area, I know the FCC monitors
VHF/UHF from their Powder Springs monitoring office. As a matter of fact,
I know they listen to my repeater since I got a nice call from a fellow
over there one morning who wanted some help tracking down some interference
to the Atlanta Police Dept's radio systems. (Turned out to be a GMRS machine
co-located on the TV tower where my machine is located and I was able to help
him.) Anyway, he made a comment that he listened to my machine everyday, he
said he thought the topics discussed were interesting. So we know that in at
least one major city the FCC is listening, but they don't seem to be handing
out a lot of NALs for what they hear.

>> Don't forget, you (like me) sit in
>>that boat of "Extra Class" licensees (If only it were universal that we had
>>extra class, right? Sorry for the pun.) Are you a sociopath?
>
>Gary's an Advanced licensee, not an Extra.

That's true. I've remarked on this before. I decided the 20 WPM Morse test was one charade in which I didn't have to participate. It was insulting enough to have to take the Advanced test to get back the priviledges I use that (dis)Incentive Licensing had taken away. I didn't feel it necessary to take a high speed Morse test to get back priviledges I didn't wish to use anyway. I doubt I'm alone in that attitude since Extra remains the smallest amateur license class.

>I expect more problems if/when I put up a higher gain antenna and /or
>amplifier? And finally whats the best way to cure the problem.

There may be a problem with the cable or the cable box, or TV set if
it's cable ready, but with your antenna so close by, the field strength
may just be overwhelming the converter box's shielding. Distance is your
friend in this situation. If you can locate your antenna further away,
or use a directional antenna that directs the field away from the cable
box, or TV, you'll likely reduce, if not solve, the problem. You can,
of course, try to tighten up the shielding of the cable run and the
converter box, or TV, as well. Since no one else has complained, it's
likely the ingress is occurring at the cable box or TV rather than the
cable. If your signals were entering the cable, others would be complaining
of interference of varying degree as well.

Cable companies in some areas have wised up and don't put premium
channels on 18 so they don't have as many complaints about this
issue.

>more folks would pay for a strong front-end.

Icom used to make equipment that was fairly intermod tolerant too.
The IC-2AT was a rugged reliable HT with good intermod rejection,
an 800 channel memory, and an honest 5 watt output. However, the
demand for Gameboy features finally killed its market share, and
Icom went along with the crowd. The Radio Shack HT is similar to
the older Icoms, but with some improvements. If it starts outselling
the Gameboy radios, the manufactuers may change back to making radios
instead of scanners that happen to also have transmitters. Don't hold
your breath, however. No ham radio manufacturer ever went broke by
underestimating the intelligence of his customers.

I've been giving a little thought to this problem. A transponder seems
the only reasonable way to go. Due to multipath and signal shielding
problems, tracking from an outside van, or even from a handheld unit,
is going to be a difficult problem.

VLF would penetrate the building and debris better than other frequencies,
and not suffer as much from multipath. A VLF transponder could give pretty
accurate distance from the tracking station using round trip timing of the
signal, but bearing information would still be vague. As a handheld tracker,
though, the accurate distance information could allow the hunters to rather
rapidly localize the position of the firefighter. They could wind up on the
floor above or below him rather easily though. Steel framed buildings might

present rather daunting problems due to signal conduction along the members, however.

A microwave transponder system would suffer severely from the attenuation effects of the structure and would have many multipath problems. However, an intelligent waveform matching program might be able to resolve the true signal from the multipath by time of arrival techniques if the pulses were sufficiently complex. The earliest arriving ray would be the direct one. This could give accurate distance and bearing to the monitoring van. But it wouldn't be possible to make a handheld unit for the tracking team because of the high computational overhead.

It doesn't seem that there is a single narrowband technique that would work in all the situations one might encounter. This may be a case where very wideband spread spectrum would perform best. SS has some rather unique advantages for ranging in a noisy multipath filled environment. The return pulse is smeared in a very characteristic manner that's fairly easy to decypher, so the effects of multipath are nullified for ranging and DFing purposes. When used over a very wide band, at least some of the signal should avoid severe attenuation by the debris field. The problem becomes computationally manageable for a handheld unit. The individual transponders become more complex, however, and that may eliminate this technique for now due to cost.

Perhaps we are looking at this problem the wrong way. What may actually be needed is a better fire scene management system so that control knows where each firefighter is *before* they get into trouble. Coupled with a simple VLF "firefighter down" beacon carrying the individual firefighter's ID, the control van should be able to pinpoint the firefighter's last known position quickly and be able to direct the rescue team to the location. They could then use a simple strength based VLF locator, similar to a metal detector, to find the firefighter under debris.

This system would require firefighters to remain much more conscious of where they are, and to report that frequently to control, thus increasing the communications load. But I think it may be the most practical solution.

Gary

>to him.

Read what I wrote, and tell me how we disagree. I'm still scratching my
head. Not violations--NALs.

If you want to count just plain violations, you'll have to include in the
repeater kerchunkers, and 50% of the QRM on 6 m and up. So we're not really
in disagreement.

>Now, how many monitoring sites would be needed to monitor all the
>VHF/UHF operators? 100? 200? 400?

We could have 10^5, and it wouldn't matter much--we have the OO's and LIC's
through the ARRL (love them TLAs!) who talk with the FCC and bubkes happens.
But enforcement on the ham bands is a whole 'nother kettle of worms.

>I contend that non-coded licensees surely account for more infractions
>(due just to their large numbers) but are never caught for the inability
>of the FCC to have blanket monitoring coverage of the V/UHF region
>nationwide.

This, unfortunately, is like the statement that pine trees falling when no
one is around to hear them make more noise than oak trees falling when no
one is around to hear them. How could we prove your statement, other than by
a "sheer numbers" argument?

Code tests are a very leaky lid-filter.

>> Don't forget, you (like me) sit in
>>that boat of "Extra Class" licensees (If only it were universal that we had
>>extra class, right? Sorry for the pun.) Are you a sociopath?

>Gary's an Advanced licensee, not an Extra.

By golly, you're right. But Gary has, before, stated that he has worked
high-speed code nets. So maybe he has code dain bramage and doesn't know it
yet.

Please respect the Followup-to: line.

: Any other news groups where it makes sense to post this?
I have an X-10 system in my home, (remote control outlets with signals sent through the house wiring, sold by Radio Shack and others) and I have a controller that will turn on an outlet at any time, then turn it off at any other time. It can be programmed to do this once a day, only on week days, only on week ends or once a week. I use it to record 'CLICK and CLACK' on PBS, then I listen to them in the car later. It worked pretty well for Paul Harvey, but the times got flaky here, so I quit doing it.

They've always allowed AM transmissions on 160m. As for the broadcasting, as long as they ID every ten minutes and the transmissions are of interest to and intended for amateurs, they're OK.

I listen to 'em a lot, but I don't know where they TX from.

No, it had 800 hardware memories, the thumbwheels selected which
one was active. The contents were mnemonic too, since the contents
and the memory number were always the same. Simple. The radio would
also make 5 watts with the 12 volt battery pack.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 25/2330Z NOVEMBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 25 NOVEMBER AND FORECAST FOR 26 NOVEMBER - 28 NOVEMBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 82/23

GOES satellite data for 24 Nov
Daily Proton Fluence >1 MeV: No data
Daily Proton Fluence >10 MeV: 1.2E+04
Daily Electron Fluence >2 MeV: 1.7E+07 (normal)
X-ray background: A2.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
26 Nov 27 Nov 28 Nov
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 26 Nov: 82/23
COMMENT: One solar region showed rapid growth overnight.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 24 Nov
Learmonth 4 1111 2122
Fredericksburg 10 4
Planetary 8 5

Observed Kp for 24 Nov: 1231 1120
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
26 Nov 30 Active to minor storm
27 Nov 30 Active to minor storm
28 Nov 16 Unsettled to active
COMMENT: IPS Geomagnetic Warning 9 was issued on 23 November and is
current for interval 25-27 November. No increase in geomagnetic
activity was observed on 25 Nov. However,a significant increase in
activity is still expected 26-27 Nov due to a coronal hole.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
25 Nov normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
26 Nov fair poor poor
27 Nov fair poor poor
28 Nov normal fair poor
COMMENT: Degraded conditions are still expected at mid and high lats.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
25 Nov 3 about 15% below predicted monthly values

Predicted Monthly T-index for November: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
26 Nov 15 Near predicted monthly values
27 Nov -20 15 to 20% below predicted monthly values
28 Nov 5 About 15% below predicted monthly values
COMMENT: IPS HF Communications Warning 11 was issued on 23 November
and is current for interval 25-26 November. Expected enhanced
conditions did not eventuate, with depressed conditions observed at
Sydney. However, degraded/depressed conditions are still expected
over the next few days. Frequent Sporadic E blanketing can be expected
during daylight hours.

3112. Xceiver for Novice?

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-26 00:46:44 UTC
From: gbrennan@umich.edu
Message-ID: <3b60hk$h2o@lastactionhero.rs.itd.umich.edu>
Source record: 256157

After enjoying s'wave for years, I'd like to buy a transceiver. Used. My requirements are (I think):

HF
with pretty good full coverage receiver
digital display
less than $500 used
CW not important
All ham bands
I'm not an engineer-type, so my romantic feeling for old or complex gear is not strong.

I have it narrowed to: IC-725, 735, 720a; TS-140S, 430S, 530S; FT-747GX, 757GX.

Am I missing any? or are their any on that list that I should NOT be considering?

A thousand thanks to any Surrogate-Elmers out there to help me with this first step.

Gerry

3113. Weather Instruments...

Jeffrey Herman (jeffrey@kahuna.tmc.edu) wrote:

: Dave from Australia said he's never read of a hostile anti-code
: article from Gary Coffman. Here's a typical example:

: gary@ke4zv.atl.ga.us (Gary Coffman) writes:
: >I think it's somewhat safe to say that many Extras are more competitive
: >than the average amateur. That's one reason they took all those tests. If
: >that occasionally means bending a rule, some may do so.
^^^^
Note the underlined word!

: So you're associating high speed licensees with law breakers.

Gary is ONLY suggesting that SOME may be so inclined, he certainly hasn't
genarlized the statement against ALL high speed CW licensees!

: >There may be another factor at work as well.
: > Some amateurs go for Extra for the status it conveys.
^^^^^^
: >That may be compensation for an otherwise unsatisfactory emotional life.
: >That general dissatisfaction may later manifest itself as misbehavior on
: >the amateur bands.

: So those that go for the high speed license are emotionally troubled.

Again, Gary did not say ALL, he suggested a rational that may account
for SOME extra class license holders behavior.

: >>Just because NALs positively correlate with Morse Code speed doesn't mean
: >>that Morse Code causes bad behavior.

: >Right. I didn't claim that, just that Morse Code speed doesn't correlate
: >with *good* behavior. So it is not an effective filter for good behavior.
: >It may well be, however, that the same forces that drive some amateurs
: >to higher speeds, and higher status licenses, also drive them to sometimes
: >misbehave more often than their fellows. Thus fast Morse may only be a
: >symptom in those people of underlying anti-social traits.

: So high speed code operators are social misfits with behavioral
: problems.

Read the last sentance which contains "may ONLY be a symptom in those
people of underlying anti-social traits."
^^^^^^^^^^
: If one of the procode proponents had posted the above with ``no
: code technician'' in place of ``extra class licensee'' can you

: imagine the riot that would ensue on here?

No riot, hopefully, just a carefully explained response to point out that the comments were NOT generalized to the entire group of no-code techs, as opposed to saying something like...some no-code techs exhibit operating procedures that reflect CB band antics."

Hans Brakob (71111.260@CompuServe.COM) wrote:
: Nope.

: Your license simply says you are allowed to establish an amateur
: radio station at at certain location (indicated on the license).
: You are further allowed to operate that station at "portable"
: locations, subject to the consent of the owner of the property at
: your portable location.

: For instance, virtually all airlines will prohibit the
: establishment of a portable radio station aboard their aircraft.

True.

: Many business establishments (especially places of public
: entertainment) prohibit radio transmitters on their premises.

True again.

: In a nutshell, anytime you are not on property which you own and
: control, the owner of the property can prohibit you from
: establishing a radio station on their property. Your federally
: issued license does not pre-empt the property rights of others,

True still...but then Hans said:
: including the publicly owned property.

Here's where the limits aren't as easy to assess. If this was
patently true then any state or local government could ban the
use of radio equipment in automobiles on public highways, etc.
The recent federal preemption of state and local laws that
prohibit radio reception equipment in motor vehicles,
(AKA Scanner laws) clearly
addresses public property other than federally owned property.

Additionally, if any business, or other establishment does
allow the "other" types of equipment such as cellphones, beepers,
etc. I think they'd have a hard time enforcing a restriction on
someone carrying an HT while allowing pagers, etc. No one's
yet asked my what my HT is while I've had it on my belt, if
they did I'd just say it was emergency pager or some such
bull s--t statement and let them go on their way.

Another poster cited schools which ban beeepers and cell phones,
but those restrictions are usually aimed at students, not
adults or other individuals over 18 that may be on school grounds
for non-student reasons.

Motorola Personal-Phone, Car Speakers

A number of speakers in a rectangular metal and plastic cased speakers have come on the surplus market here. In addition to a nice loudspeaker there is a circuit board with amplifier and other electronics in the case. There is also a mini socket, presumably for a microphone.

The speakers are marked: SSN 2005 B.

These speakers are ideal for both mobile and base operating for example the built-in audio amp is great for using a HT as a mobile rig in the car or with a XCVR whose audio output is insufficient.

BUT , I would also like to be able to use the rest of the electronics in the case, e.g. for VOX operation. I also have a suspicion that there may be some DSP functions hidden in there.

The local Motorola people were quite hostile to the suggestion that they donate a circuit schematic. Can anyone out there advise how to use all the functions in this speaker?

>exam (not multiple choice) those that know the material well know how
>much to write to receive full credit. And even if there is a question
>of whether they've written ``enough'' they can always ask me during
>the exam.

Jeff, those who know *you* well enough know how much to write to receive full credit. Sure, they must know the material, also, but if they don't know what you want, they can totally miss your "correct" answer. This is part (in not most) of what makes some people good test-takers. They can listen to an instructor and spit back out exactly what the instructor says!

In VE examinations, the testees have not been sitting in class for days listening to what the graders want them to put on their papers.

Maybe essay or short answer exams aren't as bad as David thinks, but they certainly aren't easy to grade *or* take.

>Will essay-type exam questions take too long to administer? Not if
>the VE's are well-schooled themselves on the material.

You should realize that *grading* can take forever. Especially when most of the VEs are not used to doing it everyday. Being well-schooled may help, but it isn't the only factor involved.

3129. ** Question re: HTX-202 **

I am in the market to purchase a HTX-202, but before I do I have a
couple questions:

1) Has Radio Shack done anything with their newer models to cut
down on the heat generated when hooked up to an external power
supply (regulated power supply or car cigarette lighter adapter)?

2) Does Radio Shack plan to release a dual-band HT in the near future?
(If they do I may just wait a little longer and purchase one of
them instead.)

Please email me at:

>Oct.30th). Also how well updated is this site kept? Any ideas or help
>appreciated......I'm starting to get a little anxious for my license!
>Thanks for any help.

Tom:

I could be completely wrong about this, but it's been my impression that call sign data-bases are run off of conventional software and are only subject to change every so often. This being the case, I wouldn't expect to find your call listed too soon in the future. Unless, of course, the site you are using is different from the ones that I have used in the past.

Congratulations on the new license! You're experiencing the hardest part of getting a license: the wait.

ARLP049 Propagation de KT7H

ZCZC AP63
QST de W1AW
Propagation Forecast Bulletin 49 ARLP049
From Tad Cook, KT7H
Seattle, WA November 26, 1994
To all radio amateurs

SB PROP ARL ARLP049
ARLP049 Propagation de KT7H

Except for the low solar flux values, conditions have been fairly good, as indicated by low geomagnetic indices. Over the past few days there have been many periods where the K index was one or zero. A K index of three is what we normally expect, and anything below three is a good indicator of lower absorption and stable conditions.

Too bad that these stable conditions are not expected to continue. The DX contest this weekend will probably see the adverse effects of solar wind from a coronal hole. The bad effects are expected to peak late in the contest, and will be most noticeable in the higher latitudes and over polar routes.

Recurrence of effects due to solar rotation suggests more unstable conditions centered around December 17, although a lower level of activity is expected, compared with what we should see this weekend. Look for the solar flux values to decline over the next week down to the low seventies, where it is expected to remain through the first few weeks of December.

Sunspot Numbers for November 17 through 23 were 29, 28, 23, 22, 11, 11 and 12, with a mean of 19.4. 10.7 cm flux was 79.1, 80, 78.4, 78.8, 77.8, 76.3 and 77.5, with a mean of 78.3.

The path projection for this week is from the center of the United States to Vietnam.

80 meters should be good from 1030z to 1400z, and 40 meters from 1000z to 1100z and again from 1400z to 1530z. On some days there may be propagation during the 1100z to 1400z period. 30 meters should be open from 1500z to 1730z and from 2230z to 2345z. 20 meters may be open on some days from 1600z to 1730z, and on fewer occasions up to an hour earlier and two hours later. On a few days there may also be an opening after 2230z on this band. The bands

above 20 meters do not look good for this path at this time.

I suppose it's possible to have damage to the front end of your tuner from cable, if it's not capacitivly coupled. There is a cable system in Michigan that I've seen have 28 Vdc across the leads. It won't effect most, but might some.

Hello to all!

I am looking for the manual (or a copy of it) for the
Dentron 160-10M monitor tuner, high-power flavor.

I would be more than happy to pay for copying and postage
charges if you can provide this.

Thanks and 73!

Ron (wb8ruq).

> So if you want a rig that receives DC to light, fine, but don't bitch
> about the inevitable intermod.

Let's be clear about this - at no time did I ask for a rig that would receive airband, commercial traffic, the marine band or TV sound.

I asked for a 70cm radio with a detatchable front panel, and was told that the only suitable radios were the dual banders from Kenwood and Yaesu.

I used to have a Maxon CGX-4020 in my car - it only had 4 channels, was twice the size of the FT-5200 and did not have a remote front panel, but at least it worked well and cost me less than 80 quid (US$ 120) including all the crystals.

Now I have an FT-5200 which seems to be capable of just about anything apart from the one job that I actually bought it for - talking to other radio hams on my regular journey through London.

There is a law in the UK concerning 'fitness for purpose', which I will now be following up with Yaesu Europe.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 26/2330Z NOVEMBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 26 NOVEMBER AND FORECAST FOR 27 NOVEMBER - 29 NOVEMBER

1A. SOLAR SUMMARY
Activity: low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 83/24

GOES satellite data for 25 Nov
Daily Proton Fluence >1 MeV: No data
Daily Proton Fluence >10 MeV: 1.2E+04
Daily Electron Fluence >2 MeV: 6.1E+06 (normal)
X-ray background: A2.6
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
27 Nov 28 Nov 29 Nov
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 27 Nov: 84/26
COMMENT: One solar region continued rapid growth overnight, chance of
isolated M class flare.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: major storm

Estimated Indices : A K Observed A Index 25 Nov
Learmonth 34 3345 6543
Fredericksburg 26 3
Planetary 45 3

Observed Kp for 25 Nov: 0110 1121
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
27 Nov 30 Minor storm
28 Nov 18 Active to minor storm
29 Nov 16 Active
COMMENT: IPS Geomagnetic Warning 9 was issued on 23 November and is
current for interval 25-27 November. Storm levels were observed
during local night. This activity is believed to be associated with a

coronal hole.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
26 Nov normal normal poor-normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
27 Nov fair poor poor
28 Nov normal fair poor
29 Nov normal fair poor

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
26 Nov 13 near predicted monthly values

Predicted Monthly T-index for November: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
27 Nov -10 About 15% below predicted monthly values
28 Nov -10 About 15% below predicted monthly values
29 Nov 15 Near predicted monthly values
COMMENT: Geomagnetic activity in progress, degraded/depressed
conditions are expected over the next few days.

3138. Re: How Do I Convert Local Time To UTC Time?

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-27 00:15:38 UTC
From: jeffrey@kahuna.tmc.edu
Message-ID: <CzwGq2.7uH@news.Hawaii.Edu>
Source record: 256091

In article <CznC97.1LA@world.std.com> drt@world.std.com (David R Tucker) writes:

> That means "midnight" = 12 p.m. = 2400.

p.m. = post meridian, so 12 p.m. certainly is not midnight. At midnight
the sun is antipodal to your time zone's central meridian (a time
zone's central meridian is a multiple of 15 degrees - you are within
7.5 degrees of your zone's c.m.) so the sun is no longer `post' (after)
your c.m. - it is exactly opposite it.

It's too bad the US doesn't use just the 24 hour clock.

I'm kind of new to Internet news groups so if I'm posting this in the wrong place please don't flame me.

I am very close to completing 5-band Worked All States, and I'd like to schedule some contacts to fill in the 4 gaps I have. I need QSO's (and QSL's) for 15-meter contacts from Nebraska, South Dakota, West Virginia and Delaware. I live in central Missouri and have been unable to hear those places is SS and various other contests. I will work any mode at any time the band is open, preferably on a weekend due to my irregular work schedule. If someone living in one of those states is willing to help, I would love to hear from them.
Thanks and 73 - Alan NS0B

Hi all,
Tried useing callsign.cs.buffalo.edu to see if my call is listed
yet. I haven't recieved my license yet (any day now!) but was hopeing to
find out what is was before it came. I tried but nothing comes back. Maybe
I'm doing something wrong. I tried sending: name -l Randall, nothing. I
tried Zip 12601,
nothing. I tried City Poughkeepsie, nothing. Nothing comes back at all. I
sent a help message and (Yup you guessed it!) nothing!
I figure I HAVE to be in the FCC computer by now (Passed the exams
Oct.30th). Also how well updated is this site kept? Any ideas or help
appreciated......I'm starting to get a little anxious for my license!
Thanks for any help.

Message-ID: <785883934@f747.n115.z1.ftn>
Source record: 256092

I'm having trouble getting my Icom IC-281H and AEA PK-96 to work at 9600 baud packet. Works fine at 1200 baud, and transmits fine at 9600. The problem seems to be with receiving.

A loop-back test seems to indicate that the PK-96 is working ok. So, I sent the new rig back to Icom, but they said nothing wrong with it.

If I issue a WHYNOT command, the TNC gives me a "Received packet beneath DCD threshold" every time a 9600 baud packet is received. I've spent a lot of time trying to find the perfect volume/squelch level, but to no avail.
If you've been successful with using the IC281 and PK96 together, I'd really appreciate hearing from you.

Thanks.

3143. Regency schematic Can anyone help me find a schematic for a Regency Micro-Com L64C. I would settle for a source for info on older commercial rigs tnx...cleve wd5bor

3144. Kenwood TM-733 Flop

Newsgroup: rec.radio.amateur.misc
Date: 1994-11-27 04:41:15 UTC
From: arthurc@crl.com
Message-ID: <3b92lb$3sp@crl9.crl.com>
Source record: 256097

I went to HRO yesterday to get my first radio -- a Kenwood TM-733A mobile dual-bander. In spite of the efforts of myself and two experienced Hams, we couldn't get it to start up. In exasperation,we returned the unit the next day -- preparing for the salesman to just plug it, turn it on, and give us a scornful look. After 5 minutes to tweaks and twiddles, he pronounced the unit "dead in the water." Another salesman came over, and said that ours was the second Tm-733 returned to their store within the last 24 hours. Same prob = wouldn't even start up.
So I went for another unit. But I thought I'd report this "caveat emptor" for other hams who might be considering that particular Kenwood.

3145. Re: >> Survey Results: 6M AM <<

Source record: 256100

Rob,

Unfortunately, I don't have the time to check in here very often, so I completely missed your 6 meter AM survey. Here's my $ .02 anyway:

I'm in the process of getting on 6 meter AM with a Johnson Viking Ranger II, a Tapetone 6 meter converter from the Carnegie Mellon amateur radio club's recent sale, and my HQ-180-AX. I also have a Johnson Viking 6n2 and a WRL Globe Scout 680, but I'll probably stay with the Ranger II.

My first experience on phone was on 6 meter AM back in late 1956. I was first on with a Gonset Communicator and a 3 element Telrex beam, but moved up to a Globe Scout 680 (not the same one I have now) and a 5 element Hy-Gain beam when they were a brand new company. The sunspot cycle was at a high and we had frequent openings and in the few months before I upgraded to General Class, I ended up working about 23 states.

I'm glad to hear that there's activity on 6 Am again. I'm looking forward to getting back on.

73,

Tony

Source record: 256101

Unfortunately, I've discovered that my telephone interference is a lot worse that I had imagined. My neighbors have just been nice and haven't been saying anything. One casually mentioned that it was a bit of a problem (and apologized for doing so!), so I started asking around and discovered that 2 out of 3 I've asked have had a problem.

I've gotten hold all the information I could find and the ARRL has bent over backwards being helpful. The literature and theory is nice, but nothing substitutes for real-life experiences. I would therefore appreciate your suggestions.

Thanks and 73,

Tony

> Tried useing callsign.cs.buffalo.edu to see if my call is listed
> yet. I haven't recieved my license yet (any day now!) but was hopeing to
> find out what is was before it came....

Sorry, but the callsign database updates seem to be about six to eight weeks old at the best, and about three months old at the worst. My XYL's record finally showed up in the database about seven weeks after she had received the paperwork from the FCC.

On the other hand, we found out her callsign by calling the personal radio licensing division - found out early enough to have some QSLs printed so she could hand 'em out on the day her paperwork arrived after some hastily arranged skeds with freinds, and an equally hastily arranged "say, let's go out to eat, tonight.. and oh, by the way, this came in the mail for you, today."

Remember, you're not legal until you have the paperwork in hand!

Hang in there! 73 Wayne KF5ZC
